I have read somewhere of red snow being seen in this region; so it is, but it is only snow covered with a vegetable juice. When I first saw it I was surprised . . . but soon noticed that it was confined entirely to the line of travel. This led me to examine it more closely, when I found that it was caused by the juice of a berry which grows on a ground vine at the head of the timber limit. When pressed this berry gives out a purple juice, which by dilution shades down into a pale pink. The juice is absorbed by the leather of the Indian's moccasins as he tramps on the berries, and afterwards stains the snow as he travels over it. This, by the heat of the sun and the action of gravity on the hillside, is distributed over a wide space, compared with the track, and is visible after all sign of the track is gone. The red snow of the Arctic regions is in part due to vegetable colouring matter. Might not some at least of the instances recorded in which the phenomenon has been observed be traceable to a similar source?

HOW THE CHURCH HAS ESTRANGED THE PEOPLE.

A HEAVY INDICTMENT BY DR. C. A. BRIGGS.

THE discussion of the question, Is Christianity played out? which is itself pretty well played out now on this side of the Atlantic, reappears with a difference in the *American Forum* for November. Three articles are bracketed under the general heading, "Is Christianity Losing Ground?" The first and the weightiest—on "The Alienation of Church and People"—is from the pen of Dr. Charles A. Briggs, who, since his condemnation by the Presbyterian Assembly, seems disposed—somewhat naturally—to take gloomy views of the ecclesiastical situation. Yet these sober strictures of a theologian who is a leading Churchman, and entertains exalted notions of the dignity and mission of the Church, form one of the most weighty indictments against the Churches which have appeared in recent times.

We are living, he tells us, in "the ebbtime of the Christian Church. The Church is ruled by dogmatists, ecclesiastics, and traditionalists. But their day is nearly over." The Church, as at present constituted, has lost the confidence of the people in its (1) ability to teach them the truth, (2) authority as a divine institution, and (3) sanctity. As endowed with the Holy Spirit the Church ought to be in the van of knowledge. But theology is no longer the queen of the sciences. Roman Catholic theology is too mediæval; the Protestant theology savours too much of the seventeenth century; even the more advanced types of Protestantism have not got beyond the eighteenth century.

"THE FILTHY RAGS OF TRADITIONALISM."

Happily, there are liberal theologians:—

These ministers gather about them multitudes who without them would be lost to the Christian Church. The liberals in the great Protestant denominations for the most part see eye to eye, and stand shoulder to shoulder. . . . It is a characteristic of liberals that they "believe in the Holy Ghost." They have confidence that the Holy Spirit is guiding the Church of our day as truly as He guided the Church of the apostles.

They are not destructive, but constructive. They "have removed the rubbish of traditional theories and gained the real Bible," and "a real Christian history."

They have traced the dogmas of the systems to their roots, and have determined what was derived from Holy Scripture, what from Greek philosophy and Roman jurisprudence, what from the creeds, what from the speculations of the theologians, what from the provincial schools of theology. . . . They . . . strip from the dogmas the filthy rags of traditionalism in order to clothe them in the shining raiment of history. . . . Early in the next century we may hope that a new theology will advance to the front of human learning and will become once more the mother and queen of all truth.

CHURCH AUTHORITY "WELL-NIGH RUINED."

The authority of the Church was impaired when it divided into Greek, Roman, and Oriental communions, was shattered when at the Reformation it split up into a host of national Churches, and was well-nigh ruined when the national Churches of Great Britain were confronted with large numbers of non-conforming sects. Men seek in vain amongst them for any satisfactory claimant to the authority which properly belongs to the Church.

The Protestant denominations have in the main abandoned the theory that their types of church government are chartered in the New Testament, and therefore they seek historic right. . . . The General Assembly of the Presbyterian church in the United States of America in this year 1893 declared it to be heterodox to say that "the Church is a great fountain of Divine authority."

SALVATIONIST AND SACERDOTALIST.

The Salvation Army, "one of the most aggressive forms of modern Christianity," has "discarded the Church form of Christianity altogether, and adopted the Army form." It may result in another variety of the Church form of Christianity, or may prove only a temporary refuge for a more devout and aggressive type of Christianity, or "like the monastic orders, it may become an auxiliary of the Church." Confidence in the Divine authority of the Church, "a vanishing quantity in most Protestant communities," is "all the more powerful in the Episcopal churches through the potent influence of the Anglo-Catholic movement, and also in the Roman Catholic Church." Hence these Churches will gain as the others lose. "The denominations of Christians are, in fact, losing the confidence of Christian people."

THE FAILING SANCTITY OF THE CHURCH.

The sanctity of the Church is felt to be lacking. Protestants have depreciated good works, and not taught them as essential to salvation. Rome has upheld a higher ethical standard for the saint, but in the main has been content with a ceremonial sanctity.

Church membership, subscription to creeds, conformity to doctrines, liturgies and ceremonies, the observance of religious customs and sacred days, have been made of more importance than repentance, good deeds, and Christlike lives. . . . Where are the great preachers, the great church-buildings, the great expenditure of Christian men and money—among the toiling masses of the people, or among the comfortable and well-to-do?

The Churches have been slow to engage in Christian work. Almost all the great Christian enterprises of modern times have been undertaken by consecrated men and women outside the Church, and often in spite of the opposition of ministers and other ecclesiastical authorities.

NO "CHURCH OF THE PEOPLE."

The Churches have been slow to recognise woman, or to see "what a mighty transformation will take place when woman enters with all her energies of Christian love into the field of aggressive Christlike service."

The Church has limited its conception of salvation too much to the future life. It has not comprehended the length and breadth of the salvation taught by Jesus Christ. The poor, the sick, the suffering and the dying need a salvation that relieves their physical maladies.

The Church is called upon to consider and to solve the great social, industrial, and sanitary problems of our times. The Church has lost the confidence of the toiling and suffering masses by neglecting these problems. . . . It remains to be seen in the immediate future whether a new denomination of Christians will spring into existence to be the Church of the people, or whether the alienation of the Church and people is still further to increase, while the people solve their religious and social difficulties without the aid of the Churches.

THE CHURCH OF THE FUTURE.

Dr. Briggs concludes by denouncing denominationalism as "the gr-at sin and curse of the modern Church."

The denominations have accomplished their historic task. There is no longer any sufficient reason for their continued existence. They should yield their life and their experience to a more comprehensive and more efficient church plan, one that will embrace all that is best in each, combining the executive bishop with the legislative presbytery and the electing people in one comprehensive organisation, in which every form of tyranny, injustice, and wrong will be stayed by wholesome checks and balances, in which the official doctrine will be reduced to the simple sentences of the universal catholic faith, and in which conformity to Jesus Christ in character and service will be regarded as of vastly more importance than conformity to doctrine, discipline, or ceremonial. Then we may hope that the Church will have regained the confidence of the people in her Divine authority, sanctity, and catholicity.

THE EVOLUTION OF THE "GUINEA-PIG."

"THE Professional Director," whose be-all and end-all is to draw his guineas and decoy unwary shareholders, is pilloried in this quarter's *Investors' Review*. That review has, it appears, succeeded so well as a five-shilling quarterly that from the 1st of January next it will be brought out—naturally in smaller bulk—as a shilling monthly: a reassuring proof of the popular desire to be told the plain unpleasant truth, especially when told so vividly and slashingly as by Mr. Wilson. He thus introduces the class of men he is going to "roast":—

Pick up Mr. Thomas Skinner's "Directory of Directors," and look at the names most frequently found there. Are they names of men of business? No. Picture them in the mind's eye. Behold the long procession of lords and lordlings, baronets and knights, generals and admirals, colonels and captains, honourables and right honourables, aldermen and M.P.'s, all grades and conditions of labelled persons down to the common barrister. See how they throng upon the "boards" of companies, and make tanners of themselves, or tinsmiths, tailors or tobacconists, washerwomen or brickmakers, hatters or hog-feeders, keepers of gin-palaces or dairies, horse-dealers and knacker-yard owners, or grocers—all and everything comes handy to these men, if only the due modicum of guineas is forthcoming. Gold gilds all. . . . There is never a company—of the classes these men settle upon—gets into difficulties but what its "board" proves to have been useless or worse. Its members knew nothing or next to nothing of the business in hand.

THE IMPECUNIOUS LORD.

Special types are then drawn to life:—

Perhaps he is but a courtesy lord, or he may be a peer of ancient lineage or a new-made nobleman, whose title has been given him as a reward for political services or to end his much begging. Anyhow, his endowments are smaller than his requirements. So he comes to the City and lets his name to the company promoter. On this "board" and that he is to be found, sometimes as "chairman" or "deputy-chairman," always as an "ornament." . . . Often much dirty work of a kind falls to the poor man's lot. He has to dress up falsehoods as facts, and lie with dignity and discretion at the behest of his master. It is hard, but what can he do? He must have his carriages and horses, his retainers in livery, his house in town, his yacht or his shooting-box; he must bet a little to be in the fashion, and gracefully lose now and then at baccarat.

WHAT M.P.'S HAVE MADE OF THE "CITY."

Similarly the retired Anglo-Indian determined to live in the style he has been used to in the East, turns to "the City," where mysterious fortunes are made, and lets himself out as "director." He is "drawn into the whirlpool," in most cases "only to be cast forth again stripped and covered with mud":—

But the greatest nursery of the guinea pig species of director is, when all is said, the House of Commons. . . . Who does not know some being of this cast—the loud-tongued brawler, the impudent liar, a simulator of patriotism, a suborner of the electorate, a cut-purse with no shred of conscience, a designer of fraudulent prospectuses, a concocter of false balance-sheets, distinguished, perhaps, for his "piety" and works of charity—done in public? . . . Through them more than through any other class of person . . . the "City" has become a hot-bed of thieves.

"ALL GAMBLERS TOGETHER."

The Inspector-General in Bankruptcy has reckoned the annual loss of the British public through the promotion of bubble or semi-bubble companies at twenty millions sterling, a figure the reviewer thinks too high. But "for this the guinea-pig class of director is, more than any one else, responsible":—

It is altogether an abominable thing, this company-manufacturing industry, but it is not the plundered shareholder

any more than the decoy-duck director who can be trusted to sweep it away. They are all gamblers together often, a corrupt product of a civilisation which much parade of wealth has tended to putrefy.

LET IN THE LIGHT.

The reviewer suggests two remedies. First and foremost "publicity, publicity." The affairs of every failed company "ought to undergo public examination like a common bankrupt." Every public company should be subjected to frequent criticism during its lifetime.

The custom that all new prospectuses should be noticed in newspaper money articles as a matter of course, and without criticism . . . as a portion of the paid advertisement . . . ought not to be. . . .

To aid intelligent criticism, fuller balance-sheets and profit and loss accounts might be made compulsory by legislative enactment. Most company balance-sheets are at present shamefully deficient in information. As corollary to this, accountants ought to be made liable to fine and imprisonment if convicted of having "passed" any balance-sheet whose figures were afterwards discovered to be misleading. Should they have "certified" a false or duping balance-sheet, their fate ought to be imprisonment with hard labour.

CREED AND WORK OF THE ETHICAL SOCIETY.

PROFESSOR FELIX ADLER, founder of "The Society of Ethical Culture," writes in the November *Forum* on "Modern Scepticism and Ethical Culture." He dwells on the fact of the religious uncertainty which has swept over the masses of all civilised peoples, and affirms:—

If morality and religious belief must stand and fall together, then the outlook into the moral future of the human race would be dark indeed. But it is at this point that the Ethical Societies have taken a new departure. The gospel which they preach is essentially this: that the good life is possible to all without the previous acceptance of any creed, irrespective of religious opinion or philosophic theory; that the way of righteousness is open and can be entered directly without a previous detour through the land of faith or philosophy. The word "righteousness" acquires in the Ethical Societies the supreme place. It is written in our Holy of Holies. It is pronounced with reverence and piety; it is the best thing in the world we know of. This does not imply that belief in God or in Christ is denied. The Ethical Societies are not societies of free-thinkers or agnostics. Many who belong to us are radicals and agnostics, but others are ardent theists.

Their attitude to the Churches is not unfriendly. "The ethical societies cover ground which the Churches cannot cover. They are missionary societies of the moral life in *partibus infidelium*."

THE SLIGHTED SCIENCE OF CONSCIENCE AND CHARACTER.

They hope also to serve the Churches by specialist study of ethics.

Moral teaching has been in the past and still is almost exclusively in the hands of theologians. The leading interest of these teachers, however, lies in the realm of doctrine, and they have had, as a rule, no special training for the scientific study of the subject of ethics. The consequence has been that the progress of moral science, like that of the natural sciences under similar circumstances, has been greatly retarded. . . . The evolution of conscience among mankind generally has only begun to attract attention. The development of conscience in the young is little known. The scientific study of character which Mill proposed has remained a desideratum to this day. . . . Then again, the practical problems of ethics have not received the attention they deserved, such questions, for instance, as those of the hygiene of the passions, the best methods for the training of the will, and again, beyond these, the larger problems that affect the welfare of society as a whole, the problem of justice as between the social classes, the problem of the moral functions of the State, and the like.

THE ANNIHILATION OF THE DRUNKARD.

A SWEDISH DOCTOR ON THE KEELEY CURE.

Eira is an important little seventeen-year-old medical magazine—a sort of Swedish *Lancet*—published at Stockholm by Dr. E. W. Wretling. In No. 14 there is a noteworthy article of general interest by Dr. Selldén. It is a paper on the Keeley Cure, which has often been and is even yet confounded, not only by the public but even by physicians, with the "Gold Cure." Dr. Selldén has studied the effects of the cure in the Keeley Institutes at Christiania and Copenhagen, and the remarkable results he has witnessed have made a valuable Keeley disciple of him. At the Copenhagen Institute, out of eighty-two patients Dr. Thygesen cured completely all the morphia-maniacs, while of the alcoholists 16 per cent. became backsliders. At the Christiania Institute, Dr. Kjennerud has treated thirty-seven patients since the 10th of March—four morphia-maniacs who were cured completely, and thirty-three drunkards, of whom two only fell back into the "clutches of their enemy." Dr. Kjennerud did not believe that in the north it would be possible to keep down the proportion of backsliders to 5 per cent., as Dr. Keeley had believed, since alcoholic liquors were too much in request at the social gatherings in Scandinavia. He would, however, be fully satisfied if they could keep the proportion to 25 or 30 per cent. If only half the patients were reclaimed it would be a gain to the community.

In Christiania, the general attitude is in favour of the Keeley Cure, owing to the personal esteem in which the physicians of the Institute are held, and to the fortunate fact that the "gold cure" has never been practised there. The confounding of the "gold cure" with the Keeley method has placed the latter at a considerable disadvantage. For example, in June last year and in May this year, Professor Brandes gave an account in the *Ugeskrift for Læger*, of experiments made with the "gold cure" at the public hospital in Copenhagen. An extract from this account has since passed through several Swedish, Norwegian, and Danish papers, and been understood to refer to the *Keeley Cure* in spite of the author's pointing out that it was *Monroe's* cure. This same account of Professor Brandes is mentioned in this year's May number of the *British Medical Journal* as referring to the Keeley Cure—a very serious error indeed. From what Dr. Selldén heard and saw at the "gold cure sanatorium," which he also visited, and where he met the physician and manageress of the institute as well as three patients, he understood that Dr. Monroe's "cure" is merely a disappointed endeavour to copy Dr. Keeley's method. Under the "gold cure" treatment, the patient gets weak-sighted, his pupils dilate, he has fits of dizziness and burnings in the throat, a sensation of dryness of the lips (the effect of atropia?); by-and-by, fits of ague and considerable reaction with manifest infiltration after the injections, which are painful (strychnine or other toxic matter?), and finally vomiting, which occurs as soon as he has received a "dram" and directly afterwards an injection (apomorphia?). None of these effects have ever been observed under the Keeley Cure. Dr. Kyhl, who first had the management of the "gold cure sanatorium," left the institute some time ago, dissatisfied with the "cure" which causes much suffering to the morphia-maniacs, according to the statement of the manageress. It is a noteworthy fact, too, that Dr. Monroe has written to Dr. Keeley asking to be allowed to buy some of the latter's medicines.

The Keeley Institute at Christiania is very conveniently situated in Ullevoldsveien, No. 57, in the neighbourhood

of St. Hans Hangen; it is fitted up in first-class style, and the attendance is in every way perfect. Patients should, if possible, live at the institute, during the first week, at any rate—they may then live at home or at a hotel. There is a boarding-house for them close by. Punctually four times a day they are required to be in the reception room to receive in the arm a subcutaneous injection of the Keeley fluid. They get a medicine at the same time, a teaspoonful of which is to be taken every other half-hour in a half-tumbler of water—the individuality of the patients and the different phases of their disease being taken into account, and the doses regulated accordingly. The diet is strongly nutrient and easily digested; the patient exercises freely in the open air, takes a warm bath twice a week, and retires early. The first few days he is allowed as much brandy, morphia, opium, etc., as he requires, but can only obtain it from the doctor. This is not that the doctor may mix anything else with it, but simply that it may be known how much the patient consumes of his favourite poison. On the third or fourth day the drunkard has, as a rule, lost all desire for spirits, while in a week or a fortnight the morphia-maniac has, without any trouble worth mentioning, been weaned from the habit.

"No Such Thing as an Unearned Increment!"

THIS is the assertion with which E. N. Dingley, in the *American Journal of Politics* for September, advances to the defence of millionaires, corporations, and other wealth accumulators. He reaches his conclusion by an analogy which may surprise the sober sociologist. "Nature is for ever progressive," he reminds us. "The colt becomes a horse; the seed becomes the grain." "There is a corresponding increase in value," owing to the presence of "a society having wants to be supplied." So with land. In it—

a legitimate increment takes place because of the existence and growth of a society with wants to be supplied. Society certainly would not claim the increment in the case of the farmer's seed or cow; . . . nor can it claim the increment in the case of A's piece of land. In all these cases, it is very evident that the increment is due, not to the natural or artificial transformation, but to the existence of a society. *Per contra*, if society does claim the increment in the case of A's land, it can claim the increment in the other cases with equal justice.

Mr. Dingley calmly ignores the perfectly obvious fact that the increase in value of the colt and the seed is due partly to unaided nature, partly to the farmer's labour, and partly to the presence of society; while the increase in the land's value is often entirely due to the increase of human society or industry in the neighbourhood. He thus fails to perceive that society, while entitled to only a portion of the increase in cereal or livestock, as in the shape of rates and taxes, may be held justly to claim the whole of the increased land value which has not been created by nature or the landowner's exertions. Yet Mr. Dingley goes on to declare that—

"Society owes no man a living" and "Something cannot be obtained for nothing," are two axioms which lie at the foundation of all true social and material progress.

The second axiom is just what Mr. Dingley's opponents wish to enforce against such landlords as draw enormous revenues from land which neither they nor their fathers have done anything to raise to its present value. So, too, even Henry George might accept Mr. Dingley's otherwise astonishing statement that—"There is no such thing as an 'unearned increment' either in the physical or industrial world, except in the case of theft;" although, of course, Mr. George would include landlordism under "theft."

THE MUSIC OF RUSSIA. THE LATE PETER TSCHAIKOWSKY.

THE music of Russia has been a favourite subject during the last few months. First, there were the papers on the music of various nations read at the congress at the Chicago Exhibition, and reprinted in a number of magazines; later, M. Albert Soubies published a "History of Russian Music"; and now the death of M. Tschaiakowsky again draws attention to the subject. Several magazines contain articles on the late Russian

THE LATE M. TSCHAIKOWSKY.

composer, the most interesting, perhaps, being that on his lyrical drama, "Eugene Onegin," in the November number of the *New Quarterly Musical Review*.

RUBINSTEIN AND TSCHAIKOWSKY.

Russian music (says the reviewer) is evidently on the ascendant, for the names of Rubinstein and Tschaiakowsky are growing as familiar to our ears as those of Brahms, Dvorák, and Gounod, not to speak of the host of new Russian composers, of whom our musical journals are constantly informing us. Both Rubinstein and Tschaiakowsky, however, stand out far and away in advance of their native contemporaries, and on the Continent take rank among the greatest living composers.

The works of the former are, to a certain extent, cast in the classic mould, and are characterised by rugged grandeur, bold conception, and breadth of melody; while Tschaiakowsky shows a stronger leaning towards the modern romantic school, relying for effect chiefly upon charm of melody, strongly marked rhythms, and the rich colouring of harmony with which his ideas are generally invested; his works, in fact, exhibit finesse in contrast to Rubinstein's force. Distinct as are the styles of these two masters, a strong national element is visible in their compositions, tending to produce picturesque impressions on the mind.

JURISPRUDENCE AND MUSIC.

Peter Iltitsch Tschaiakowsky was born in 1840, and was the son of a mining engineer. From his association with the peasantry, the child early imbibed a strong love for music, particularly taking to the folk-songs and antique church music; but his father intended him to study the law, and it was not till he was twenty-one that the youth entered himself as a student at the new Conservatoire at St. Petersburg. Among his teachers were Professor Zarembo and Anton Rubinstein, and when he left the Conservatoire in 1865 he took, besides his diploma as a musician, a prize medal for a cantata on Schiller's "Ode to Joy."

Proceeding next to Germany, he became an ardent advocate of the works and ideas of Schumann. In 1866 he accepted a professorship at the Moscow Conservatoire, and remained there till 1878. After this he seems to have devoted himself almost exclusively to the work of composition. It was in the spring of 1888 that he made his first appearance in London to conduct the performance of two of his works at a concert of the Philharmonic Society. Since then his works have frequently been heard in our concert-rooms, and the composer himself has come over to conduct several of them. Only this last summer, when the musical society of Cambridge was celebrating its jubilee, Tschaiakowsky was among the five foreign composers upon whom the degree of Mus. Doc., *honoris causa*, was bestowed. The Tzar, who was a warm admirer of his work, granted him some years ago an annual pension of three thousand roubles, and he has just issued an order that three of the dead composer's latest operas shall be given in the native language at the St. Petersburg Imperial Opera House during the present winter season.

"EUGENE ONEGIN."

"Eugene Onegin" was written over ten years ago, but was introduced into this country only in 1892. The text, which deals exclusively with Russian domestic and social life, was furnished by the celebrated Russian novelist, Pushkin. But the libretto is nevertheless a clumsy affair, and it is only by the continuous flow and wealth of melody, the judicious use of harmonies, and, above all, the exquisite workmanship visible on every page of the score, that the composer has succeeded in elevating the music far above the level of the libretto. Musically, the opera is a triumph.

Originality of ideas and the methods of their developments (says the writer in conclusion) are not the common property of every musician, but with Tschaiakowsky all seems to come naturally. Russia has evident reason to be proud of her Rubinstein and Tschaiakowsky, considering how much they have, by their individual efforts, raised the musical art of their country to a pitch of excellence and prestige in the eyes of all Europe.

THE BERLIOZ CYCLE.

A PROPHET is still without honour in his own country. An eminent musician like Mr. Cowen has had to go all the way to Milan to get his new opera, "Sigurd," produced; and Berlioz, one of the greatest musical glories of France, seems to have found his Bayreuth in Germany! Early in November, Herr Mottl, to whom indeed is due the chief credit for the undertaking, gave a performance in chronological order of Berlioz's operas at Karlsruhe; and to Karlsruhe the pious French have made their pilgrimages, in order to be present at the performances of the German versions of their composer's dramatic work—"Benvenuto Cellini," "Béatrice et Bénédict," and "Les Troyens," besides a miscellaneous concert devoted to Berlioz. The *Revue Bleue* of November 18th and other magazines publish articles on this subject. "Les Troyens" has had to wait thirty years for anything like adequate performance, "Béatrice et Bénédict" was first heard at Baden-Baden in 1862, and "Benvenuto Cellini," though well known in Germany, has not been heard in France since 1838.

VERY appropriately the November number of *Music* includes a translation of an article by M. Camille Saint-Saëns on Hector Berlioz. He describes his countryman as a paradox made into a man, and says that if there is one quality we must concede to his works, it is the prodigious colouring of the instrumentation.

THE PARISIAN WOMAN.

Two sketches of "European Women" appear in the *North American Review* for November. Eva Canel depicts "the Spanish woman," the Marquise de San Carlos "the Parisienne." The latter is described as "rarely beautiful," "always more or less fascinating." English or American women are more beautiful, but less artistic in dress and less fascinating in coquetry. Parisian

women of strict principles, who have not become nuns on leaving school, and who have had the courage to withstand the current of youth and passion, lead, after marriage, for the most part, lives of silent domestic martyrdom. Those who have rather loose morals—and they are perchance the greater number—seem to have a pretty good time of it, and spend their golden years "*trompant leurs maris*" with a vengeance, while they bring up their children with the greatest severity, on a system of blindfold ignorance. In fact, the cool way French women have of being immoral without giving up going to church on Sunday is a mystery.

GILDED SEPULCHRES.

The Marquise's account of the most select circles in Parisian society does nothing to remove the traditional English suspicion of the same:—

Society is more absorbing and less fatiguing, more intoxicating though less exciting, in Paris than elsewhere. . . . The masculine element and the undercurrent of rivalry with the *demi-monde* add much of forbidden-fruit-like charm to the enjoyments of society. Men have nothing to do; women naught but their toilettes to think of; there is plenty of time left for pleasures the most subtle. . . .

Strange, mysterious creatures are these Parisiennes, who spend their nights in soft, voluptuous motion, under the light of waxen tapers, gliding over the slippery wooden parquets of French salons to the sound of rapturous music. Graceful sirens, with swanlike necks and drooping shoulders, thin, pale, arms and small, aristocratic heads, are these mothers and wives whose babes cry alone in the stillness of darkened nurseries, while their husbands make love to beautiful women as vulgar, spontaneous, and dangerous as they are refined, old-fashioned, and fascinating.

In these splendid halls, these gorgeous festivals, we find no real freshness, none of that virginal charm and originality that enliven society in other parts. The women we see dreaming through one enervating waltz after another in the arms of Mephistopheles-like men are not innocent maidens: they are the wives and mothers of the French nobility. For this reason one feels in their midst inexpressible sadness. That very knowledge of life which gives them so voluptuous an attraction explains the odium in which dancing is held by the French clergy.

The Marquise prefers for her part an "evening with a new book or an old friend."

ANOTHER VIEW.

In an interview which appears in the *Young Woman*, Mrs. Alexander gives a more hopeful account of French home life. She declared:—

If I were Dictator in Paris for a week, the first thing I would do would be to hang up half a dozen of their leading novelists. They give to foreign readers quite a false impression of French life. French men and women as a rule, I am sure, make excellent husbands and wives. The women especially—they are such splendid mothers, showing as great a devotion to their children as most Englishwomen; indeed, for the sake of their children, they often sacrifice their own health. Yet in the French novels which are read in England we hear nothing of this. Then the husbands are polite to their wives for more than three years after their marriage, which is frequently not the case in England. One of my girls is married to a French officer, and this circumstance has naturally given me a greater knowledge of domestic life in France.

HOW TO REAR YOUNG GALAHADS.

"KNOWLEDGE the Preserver of Purity" is the title of an article, as wise as it is beautiful, which Mrs. Laura E. Scammon contributes to the November *Arena*. She urges that the only way in which American children, with their free and unrestrained life, can be protected from physical disaster and moral contamination is "by arming them with early and thorough instruction in all the physiological facts pertaining to themselves as human beings." "It may be said, perhaps, that for the girl the dangers of ignorance are more physical, for the boy more moral." Girls may pass through maidenhood in infantile ignorance; but "if innocence and ignorance are synonymous, there are no innocent boys." Hence the following eloquent plea to save the boys from "perdition risks":—

Dear young mother, conservator of innocence, promoter of purity, diffuser of sweetness and light, listen to my simple advice. Talk to your little children, the girl and the boy alike, about the great and precious gifts which Nature holds in her choicest treasure-box, his and her own pure, sweet baby body. Begin so soon and so simply that neither they nor you will remember the time. . . . Do not at first enter into long explanations, but teach from

NATURE'S SIMPLE AND PRETTY LESSONS.

Take them among the leguminous plants of the garden; hold in your hand the ripened pod, and point a lesson from its protection and dehiscence. Lead them through orchard paths when the boughs are ablur and the air adrift with the scented snow of falling bloom; show them the bud, the blossom, the formation of the tiny emerald sphere within the folded leaves—leaves that have performed their part and may fly if they like, now that the lusty young fruit no longer needs protection from frost or blast, and can develop without their further aid.

Soon the lessons may proceed from the vegetable to the animal kingdom. Here they will learn the use and not the abuse of the procreative faculties. They will observe the manifestations of instinct unguided by reason, and may be led to recognise in themselves the power of reason to guide and govern instinct. Give them pairs of pets of various kinds—birds, dogs, rabbits, kittens; and let each become the sympathetic *accoucheur* when little, furry, four-footed babies are born, and observe that even the lady crab in her glass globe pales with the pangs of parturition. When questions arise that cannot be answered by observation, reply to each as simply and directly as you answer questions upon other subjects. . . .

"MOTHERS OF THE NEW ERA."

Treat Nature and her laws always with serious, respectful attention. Treat the holy mystery of parenthood reverently, never losing sight of the great law upon which are founded all others—the law of love. Say it and sing it, play it and pray it, into the soul of your child, that *love is lord of all*.

Thus under your guidance will Nature unfold her sweetest, most fondly cherished secrets, and your dear child, your boy as well as your girl of ten or twelve years, will have arrived quite simply and naturally at a full knowledge of all the laws of reproduction. His fancy may linger over the prenatal days; he may picture himself as lying a fledgling with folded wings in his sheltered nest, soft brooded in mother's very bosom, lulled by her loving heartbeats, sung to sleep by the rhythm of her sweet pulses. Is there a stain upon his white soul for the knowledge that sets it to such music? Would you exchange this knowledge for the "innocence" of the boy who has been forced to abandon his belief in flying angels, in saddlebags or storks, and in their stead has accepted the garbled obscenity of the stable or the street? . . . Mothers of the New Era, what shall be our emblem? Not an angel with white wings folded across her eyes, but a Lady with a Lamp!

IS CRIME HEREDITARY?

PHYSIOLOGIST AND PENOLOGIST SAY, No.

THE old savage belief in the divine powers of deceased ancestors has of late received a sort of scientific rehabilitation. Men have talked of heredity as if it were some grim fate which formed and fixed their characters for them. Our forbears, dead and buried though they are, and compounded into dust, have played something of the part which the absolute predestinarian assigned to the Deity. Happily a reaction has set in, in the direction marked by Björnson's pithy saying, "Heredity is a condition, not a destiny." The new trend of opinion is reflected in two September essays by Transatlantic experts. Dr. H. S. Williams, writing in the *North American Review*, from the medical standpoint, restricts the function of heredity to "the retention and transmission of tendencies." His formula is, "that every individual comes into the world with possibilities representing the sum of all the tendencies of all its ancestors." "Heredity accounts for the sameness of our race;" the differences are the work of the environment. "There is a constant effort to equalise the average tendencies and bring back that hereditary balance which environment is for ever tending to disturb." "These two forces are respectively the Radicals and the Conservatives of Nature." Dr. Williams draws "the warning corollary that no mortal can be above the possibility of temptation, and the cheering one that none can be beyond the pale of hope." This is to him the great lesson of heredity.

The fundamental mission of all social reforms that go to the heart of things, must be to so mould the average environment of civilisation, that in a larger and yet larger percentage of cases the good blood rather than the bad in each newest generation shall be made to "tell."

A CONVERT TO FREE WILL.

A yet more hopeful verdict is returned in the *Forum* by Mr. W. F. M. Round, Secretary of the National Prison Association, and a penologist of high official standing in the United States. He sums up the result of his systematic examination of some seven hundred prisoners in the formula, "Criminals not the victims of heredity."

I have seen (he says) repeatedly the most virtuous children of the most vicious parents; and on the other hand I have known the children of the most virtuous parents to turn out the most hardened criminals. The old adage about ministers' sons has come forcibly to my mind.

It is environment and training, not heredity, that give the most favourable condition for the development of the criminal impulse. I wish to put myself on record, after a study of the criminal, and contrary to my previous utterances, as going squarely back to the doctrine of Free Will as laid down by our fathers, and I wish to be understood distinctly and squarely to hold the doctrine of moral responsibility as applying to every sane individual. . . . There is a pretty general and settled conviction among scientific criminologists that moral qualities, purely and simply as moral qualities, either for good or for evil, are not transmitted.

HOW TO TREAT CRIMINALS.

Mr. Round is of opinion that, from a purely economic standpoint, eliminating all Christian feeling and the duty of philanthropic effort for his reclamation, the very best thing that could be done for society would be to kill every ten years all who had placed themselves distinctly in the criminal class. But his theory of the proper treatment of criminals, based on a wider ethical platform, is summed up in the following propositions:—

1. A criminal is like any other man. 2. Too great importance has been attached to the matter of heredity, both in the judgment of criminals and in their treatment. 3. Moral traits are not inherited, except in so far as they are directly traceable

to physical conditions. 4. The ratio of punishment to crime is so small as to give the criminal such a chance of escape as he distinctly counts to his advantage. 5. The criminal is a criminal of his own volition, and feels that he has an adequate motive for being a criminal. . . . 6. We cannot reduce the criminal population until we can remove the motive for crime. 7. The criminal, when he becomes a ward of the State, must be treated with severity, but under an intelligent method making wholly for his reformation. 8. We cannot reform our criminals until we reform our prisons. 9. We cannot reform our prisons until we take them out of politics. 10. We cannot take our prisons out of politics until special Civil Service rules are fully enforced in our prisons, or so long as any prison office may be filled as a reward for political service. 11. In conclusion, to purify our prisons, to save ourselves from criminals, we as Christian citizens must throw our prayerful interest into the matter of purifying our politics and saving ourselves from politicians.

THE LATE W. G. WARD'S CHARACTER:

"A MASS OF CONTRADICTIONS."

MR. WILFRID WARD's life of his father, which occupies a leading place in several reviews, is the theme of a highly eulogistic article in the *Edinburgh*. The writer has little sympathy with the late W. G. Ward's ultramontanist, regarding the recent "exaltation of the Papacy" as the work of religious panic, but renders willing "homage to the lofty purpose and truly Christian single-mindedness of his character." Among the many barbed sayings of Ward quoted by his reviewer, two of the most characteristic may be repeated here. "My great intellect," he used to say, "is no more worthy of admiration or adoration than my great leg." "I should like a new papal bull every morning with my *Times* at breakfast." The latter suggestion is not quite so wild as it seems; for if ever the Papacy wakes up to the tremendous potencies of the newspaper, the leading article of the papal editor will be the virtual satisfaction of Ward's desire. The reviewer thus sums up the personal paradox:—

He was a mass of contradictions. His profound reverence did not hinder him from the profanity of "sending his love to the Blessed Sacrament." While he heaped contempt on the Church of England, he "dearly loved a parson;" though few men possessed so warm a heart, and though he certainly succeeded in winning his children's love, yet he "professed not to take the slightest interest in them when they were small, and he certainly hardly ever saw them." His relations with the elder members of his family was grotesque in its calm contempt of the accepted procedure of domestic propriety. He seems to have inherited an indifference towards the claims of kith and kin.

"This was the only thing in the nature of a family habit or tradition in which he took any pleasure. Generally, the fact that any relation did a thing was a reason for doing the opposite. When reproached with being unsympathetic to his relations, he replied, 'On the contrary. The Wards have always differed on every conceivable subject. Therefore, I best agree with my family by differing from them.'"

He "arranged not to be on speaking terms" with his brothers, and carefully renewed the arrangement when, on meeting accidentally at the Haymarket Theatre, he so far forgot himself and the quarrel as to discuss the play with his brother Henry. He was an intimate friend of Lord Tennyson, but could not prevail on himself to read his poetry. He had a great admiration for nature, but could not tell the difference between an oak and a beech. He bubbled over with high spirits, yet underwent tortures of spiritual despondency that might rival the heart-searchings of a Puritan. His passion for theology went hand in hand with an eager study of French plays. We might greatly extend the list of contradictions. We will only add that which was presented by his fierce intolerance and his genuine humanity.

UPROOTING THE "SPOILS" SYSTEM.

THE November State elections have advertised to the world the strength of the American revolt from the "hammy yoke," but possibly few are aware of the steady and successful campaign which American law has been conducting for many years against the established methods of political corruption. A cheering account of "Ten Years of Civil Service Reform" is contributed to the *North American Review* for November by Mr. Chas. Lyman, President of the U. S. Civil Service Commission. The movement of reform which began at the close of the Civil War resulted in the passing in 1883 of the Civil Service Law, which aimed at producing "nothing short of a revolution":—

What did the civil service law propose? In brief, this: To substitute, within the sphere of its operations, a "merit" system or method of appointment and promotion for the "spoils" system or method, and thereby to increase the efficiency and improve the character of the service; to apportion the appointments in the departments at Washington to the States, Territories, and the District of Columbia according to population; to prevent appointments and dismissals for purely political reasons, and to prohibit the levying of political assessments upon government employees, and the solicitation or collection of political contributions from officers or employees by other officers or employees anywhere, or such solicitation or collection from anybody, whether official or not, by anybody, whether official or not, in any building in which the public business is carried on.

STEADY ADVANCE OF THE MERIT SYSTEM.

The class of offices to which the new system was applicable was partly specified, partly left to the further discretion of the President. "At first the number of places within the classified service and subject to the provisions of the law was not far from fourteen thousand. It is now upwards of forty-five thousand." "The Commission never admits into its files or records any statement or evidence as to the politics or religion of applicants or eligibles." "At some of the local post offices and custom houses" the old habit of expectation has followed every change of parties with a corresponding change in the political complexion of applicants, but a marked improvement has taken place this year. There has also been

a steady although not rapid increase in the strength of the reform sentiment, as is evidenced by the passage of reform laws in two States, Massachusetts and New York, and in several municipalities; in the greater vigilance exercised by the public concerning the character and conduct of public officials, and the closer watch over administrative affairs maintained by the general public.

NEXT STEPS NEEDED.

Mr. Lyman mentions several drawbacks which require to be removed. In his opinion

a serious mistake was made at the outset by excepting chiefs of division, chief clerks, and certain other high-grade officials from examination, thus making them the prey of the spoils-men. . . . For some reason no President has yet been willing to strike these places from the excepted list; but it is to be hoped that the act will not much longer be delayed.

The civil service law contemplates that promotions in the classified service shall be made upon competitive tests; but this branch of the work has not yet been seriously entered upon. . . . That the conditions will be much improved until a well-digested and comprehensive system of competitive examinations is put into operation, is not probable.

To this movement belong the hopes of all true lovers of the nation, the race, and the kind. Its progress is one of the fairest auguries of universal political good.

FEATS AND FOLLIES OF AMERICAN FINANCE.

WITH characteristic plainness of speech, the *Investors' Review* discourses of "evil things and good in the United States." "No country, ancient or modern," it affirms, "ever displayed a greater elasticity of resources" than was shown when the United States paid off in less than thirty years a debt of almost £400,000,000. This feat, and the small amount of local indebtedness, is attributed to the system of fixed dates for redemption. "Such a thing as a permanent irredeemable debt does not exist in the American Union." In this excellent management is traced "the influence of the old conservative ideas of the South."

On the contrary, the Republican régime, which lasted unbroken in the Union down to the time of the first Presidency of Mr. Grover Cleveland, is one of the least satisfactory manifestations of Republican Government which is to be found in modern history. . . . It has been one of the most debased, debasing, and corrupt democratic administrations the world has ever seen on a large scale.

The "pension" system which within the year just closed swallowed up 32 millions sterling, "as much as it costs us, or almost as much as it costs us, to maintain our Army and Navy, and which for the current year is to be about £33,500,000," is described as "the most gigantic system of public corruption which history has anywhere recorded."

WHAT HAS MADE PROTECTION POSSIBLE.

The effect of the false economic principles which the United States have adopted has been largely disguised by "the amount of European, and especially British, German, and Dutch, money poured into the United States since the close of the Civil War," which is said to have exceeded one thousand millions sterling, and has "supplied the means by which the Union has been able to stand up under burdens which would have crushed any community, young or old, if left entirely to itself." Since the Baring crisis there has been "a slackening off in, if not complete withdrawal of, supplies of European moneys." This has made itself felt in the American crisis of the past summer. Continued for a year or two longer, it would compel the States "to fly to any expedient which will knock down the barriers standing between them and an enormous export trade." But—

all the follies and economic blunders, all the social cankers of the American Union, are but trivialities beside the blood tax to which the leading nations of Europe have to submit in times of peace. In Germany, Austria, Italy, and France, and to a smaller extent in every other European State, the devastation of an armed peace becomes every year more agonising. They must be beaten in any industrial competition with the North American Union when it throws off its shackles.

The reviewer holds, therefore, that "the American people will come through their present currency and other afflictions with little scathe," and "that the United States give at the present time, and are likely to continue long to give, the best security available for British capital judiciously invested." But he also urges that "the British public ought to let the American people themselves find the money for new enterprises, no matter how attractively these may be put before them."

In *Merry England* for November the editor introduces "a new poet," Mr. Francis Thompson—whose "Poems" have appeared this month—with the words:—"It is with a full conviction that the poets of the front rank of all times and countries can be counted on the ten fingers that we place indubitably the name of Francis Thompson as one of these."

JUSTICE TO TOM PAINE.

REHABILITATION of the defamed characters of history is quite the order of the day, and it is not surprising to find that the traditional horror with which the author of "The Age of Reason" has been regarded is being seriously impugned. Mr. E. P. Powell contributes to the November *Arena* a "Study of Thomas Paine," which sets the man in quite a heroic light. Mr. Powell begins by quoting Benjamin Franklin's Creed:—

I believe in one God, the Creator of the universe: that he governs it by his providence; that he ought to be worshipped; that the most acceptable service we render him is doing good to his other children; that the soul of man is immortal, and will be treated with justice in another life, respecting its conduct in this. . . . As to Jesus of Nazareth, . . . I think his system of morals and his religion, as he left them to us, the best the world ever saw or is like to see; but . . . I have some doubts as to his divinity.

PAINE AN ANTI-ATHEIST.

To him "Paine was a destructive by contrast"; yet with substantially the same belief:—

"I believe," wrote Mr. Paine, "in one God, and no more, and hope for happiness beyond this life. I believe that religious duties consist in doing justice, loving mercy, and endeavouring to make our fellow-beings happy." He closes the first part of his "Age of Reason" as follows:—"The creation we behold is the real and ever-existing word of God, in which we cannot be deceived. It proclaims his power; it demonstrates his wisdom; it manifests his goodness and beneficence. The moral duty of man consists in imitating the moral goodness and beneficence of God, manifested in the creation toward all his creatures.

Viewed in the light of modern Agnosticism and Positivism, this creed is eminently conservative. Paine himself declared that he wrote the "Age of Reason" in hourly expectation of being guillotined, and with the express aim of saving the French from Atheism:—

The people of France were running headlong into Atheism; and I had the work in their own language, to stop them in that career and fix them in the first article of every man's creed, who has any creed at all, "I believe in God."

AN AUTHOR OF AMERICAN INDEPENDENCE.

Mr. Powell enlarges on Paine's services to American freedom. His "common sense" is said to have hastened the Declaration of Independence six or eight weeks; delayed beyond which, it might have been delayed a century. Cobbett said, "Whoever wrote the Declaration, Paine was its author." His "Crisis" re-inspired "the whole despairing land and army" at one of the darkest moments. His "Rights of Man" was "a masterly work, and created an enthusiasm everywhere." At that date, Paine "was held to be one of the greatest men of the times,"—after Washington and Franklin, "the best loved man in the world." His "Age of Reason" changed all this. Barlow wrote:—

He always frequented the best company in England and France, till he became the object of calumny, till he conceived himself neglected and despised by his former friends. From that moment he gave himself much to drink and companions less worthy of his better days.

Mr. Powell sadly deplors the decree of the nation, which in the centennial year of 1876 excluded from Independence Hall the bust and all memorials of Paine—"the man who was the first to write the proud words, 'The United States of America,'"

A man of unsurpassed courage of convictions, of unwavering faith in the truth, and supremely possessed of that piety which consists in love for God and for his fellow-men.

FREEDOM OF THOUGHT IN THE ROMAN CHURCH.

THE "SIX DAYS" OF GENESIS VARIOUSLY RENDERED.

WHY should Christian faith and scientific freedom be declared incompatible, when even "the Catholic, who is usually reputed to be the most enthralled by faith and dogma, enjoys the highest degree of intellectual freedom"? This is the point of a courageous article by the Rev. J. A. Zahm, C.S.C., in the *North American Review* for September. Protestant and unbeliever will be inclined to doubt the existence of such lofty liberty in the Church which condemned Galileo; but they will probably be surprised to find, from the facts cited by the writer, how large the freedom allowed to Catholic thinkers actually is. He reminds us that the Fathers differed in their interpretation of the Mosaic cosmogony, the Noachian deluge, and the chronology of the Bible. The "six days" of Genesis were taken by the School of Origen and Athanasius "in a metaphorical sense," creation being supposed by them to be simultaneous. The Syrian School upheld the literal meaning. St. Augustine took the "days" to be "indeterminate intervals of time." The Hexameron of St. Gregory of Nyssa contains "the germs of the celebrated nebular hypothesis of Laplace."

PAPAL ENCOURAGEMENT OF SCIENCE.

Turning to less ancient history, Father Zahm recalls the words of the Vatican Council:—"The Church does not forbid the human sciences to make use of, each in its own domain, their own principles and methods"—and similar liberal utterances of Leo XIII. Leo XII. gave solid encouragement to Champollion in those explorations among Egyptian hieroglyphics which were supposed to impugn the trustworthiness of the Mosaic annals. De Rossi, in his investigations regarding Quaternary man, which were expected to discredit the Inspired Record, received the help and patronage of Pius IX. The alleged discovery of proofs of Tertiary man, which involved the overthrow of Biblical chronology, was the work of a pious French priest and theologian, who was never molested but rather aided in his researches by fellow Catholics. The theory of pre-Adamites, seemingly so contrary to dogma and Scripture, has been championed with complete impunity by devoted sons of the Church. When the Vatican library was thrown open to the scholars of the world, Leo XIII. wrote, "The first law of history is to dread uttering a falsehood; the next is not to fear stating the truth; lastly, the historian's writings should be open to no suspicion of partiality or animosity."

A DANIEL COME TO JUDGMENT.

One other saying we must quote, since its author is declared by a fellow associate of the French Institute to possess "the combined genius of Euler, Lagrange, Laplace, Gauss, and Jacobin." This prodigy of mathematical intellect is Baron Cauchy, and he declared—

It is precisely because it is exact and true that the Christian religion is so eminently favourable to the progress of the sciences and to the most noble faculties of our intelligence. . . . It is because it is exact and true that it presides at the sublime meditations of the Augustines, the Descarteses, the Newtons, the Fermats, the Maclaurins, the Pascals, the Linnaeuses, the Eulers, the Copernicuses, the Tycho-Brahes, the Cassinis, of all those great men of all ages, who, in the contemplation of nature and of the admirable laws established by the Creator, found without ceasing new motives to bless and adore the author of so great marvels.

When "the conclusions of science appear to contravene certain articles of faith," "the apparent discord is due entirely to a misapprehension of the teachings of the faith or to a misinterpretation of the facts of nature."

THE COMPOSER OF "THE BETTER LAND."

MR. F. H. COWEN.

FANCY Mr. Cowen having to go all the way to Milan to get his new opera produced! And the English a musical nation! The story of "Signa's" misfortunes has been keeping Mr. Cowen's name well to the fore of late, however, and *Sylvia's Journal* for December seizes the opportunity to present its readers with an interesting sketch of the composer by Flora Klickmann, happily not hidden away under the general heading "Musical Notes."

HIS TEACHERS.

Born in Jamaica, on January 29, 1852, Frederic H. Cowen composed his first "work," "The Minna Waltz," in 1858. Two years later this was followed by "Garibaldi,"

MR. F. H. COWEN.

(From a photograph by Russell and Son.)

an operetta; and as a souvenir of its first performance Mr. Cowen still cherishes a cup presented to him on the occasion by Mr. Henry Russell. At the age of eight he had Julius Benedict to teach him the piano, and John Goss to teach him harmony. Later Mr. Goss taught him the organ, and Mr. Carrodus the violin. In 1865 he entered the Conservatoire at Leipsic, and had as his masters, Moscheles, Hauptmann, and Reinecke. In 1867 he proceeded to Berlin, but the following year returned to London, and henceforth gave himself up to the life of a composer.

WORKS.

Mr. Cowen's first symphony was composed in 1869, and "The Rose Maiden," one of his most popular cantatas, was produced a year later, when he was only eighteen. A universal favourite is "The Language of Flowers," an orchestral suite. In 1888, Mr. Cowen was summoned to Melbourne to conduct the concerts, and undertake the musical arrangements generally, for the Exhibition. He was *fêted* everywhere, and his visit will be long remembered in the Antipodes. After his return to England, he composed the cantata "St. John's Eve," and the opera "Thorgrim." His new works about which we have been hearing so much of late are "The Water Lily," a romantic legend, produced at the Norwich Festival, and "Signa," the opera brought out at the Dal Verme Theatre in Milan.

THE COMPOSER AT HOME.

Alluding to Mr. Cowen as a conductor, Miss Klickmann writes:—

Calm and concise in every movement, nothing but his face reveals the fact that his whole being is on the alert and strung to the highest possible tension. His memory is apparently inexhaustible.

At home (Miss Klickmann continues) he looks many years younger than he does on a platform. Of medium height and slightly built, one can readily credit the many stories that are told of his wild mountaineering exploits. A very firm will, and a fixed determination to have his own way, are among the open secrets written on his face.

In the study, books are on the walls and in every nook and corner. Intellectual, refined, they cover a tremendous range of reading; the humorous element is also well represented. His most engrossing hobby is the pursuit of first editions, and he certainly has a magnificent collection, representing most of our great authors. In many instances he possesses complete sets of their works.

The article is illustrated with portraits of Mr. Cowen at various ages, and a few pictures of his house.

THE LITERATURE OF THE EGER COUNTRY.

EVERY year, Herr Alois John (Bahnhofstr. 25, Eger) publishes a review of the literature, relating to the history and folk-lore of the Germans in Egerland and the Fichtelgebirge in North-West Bohemia. The author, indeed, has become quite famous as an enthusiastic champion of all that is German in connection with his native country, and no wonder, for his idea is a happy one, and it is excellently carried out. From an article in the fourth volume of the series, which has just appeared, we learn that it was no less a personage than Goethe who discovered the peasants of the Eger country. His letters show how charmed he was with their dress, language, history, songs, manners and customs. Grüner published a book on the Egerlanders about 1822, and for some time it was the only book dealing with the subject. About fifty years afterwards, however, several writers seem to have been attracted to the country and its history, and from that time the Egerland has never been without its historian. The site of Eger itself, the native dress of the people, their legends, proverbs, national songs and melodies, nursery rhymes, language and dialect, etc., have all been discussed in essays and more exhaustive works of research.

The contents of the fourth volume of Herr John's "Literary Year-Book" include articles on National Art, by Dr. Heinrich Pudor; Forgotten Egerland Writers; Count Clemens Zedwitz-Liebenstein, by Herr John; The Dialect Literature of the Egerland, also by Herr John; a letter by Goethe, etc. An important feature, of course, is the extensive critical survey of the literature of the year in any way connected with the country—books, magazine and newspaper articles, etc., on such topics as Goethe at Franzensbad, Marienbad, Karlsbad, etc.; Beethoven, Wagner, Liszt, and other musicians at the Bohemian watering-places; Wallenstein literature (for it was in the town house of Eger that Wallenstein was murdered in 1634); the various articles on Franzensbad in connection with the centenary of the "bath"; not to mention more general works on the geology, ethnography, literature, etc., of the country. This bibliography is altogether most carefully compiled; even an article on "A Beauty Bath," which appeared in a recent number of the *World*, is included.

IS EUCLID DETHRONED?

ANY one not initiated into the esoteric mysteries of the higher mathematics, especially as they border on metaphysics, who happens to stumble upon the *Educational Review* for September, will find strange reading in George B. Halsted's article on "The Old and the New Geometry." The average man has been taught to regard Euclid as one of the very few unassailable sacred books of science. Not merely the deductive reasonings, but the fundamental assumptions of the old geometer he had supposed to be impregnable. But what does he find here? That Euclid the Great is fallen—is fallen! After reigning supreme and sole for over two thousand years, he is only allowed a third and somewhat precarious place beside two modern rivals. The compactness of his imperial fabric is not questioned; it is its foundations that are doubted or denied. His "axiom" as to the conditions on which two straight lines, if produced indefinitely, will meet has, it appears, proved to be his Achilles' heel.

The Russian Lobatschewsky, by one of those unexpected strokes of genius which are like the spontaneous variation that starts a new species, substituted for this celebrated axiom its contradictory, that the sum of the interior angles made on the same side of a transversal by two straight lines may be less than two right angles without the lines meeting. A perfectly consistent and elegant geometry then follows, in which the sum of the angles of a triangle is always less than two right angles, and not every triangle has its vertices concyclic. Thus Lobatschewsky, in 1829, was the first man ever to publish a non-Euclidean geometry.

To the ordinary mind this sounds like impugning the eternal certainties of the multiplication-table.

TWO STRAIGHT LINES MAY ENCLOSE A SPACE.

But an if possible more glaring act of revolt has been perpetrated.

Euclid assumes "two straight lines do not enclose a space"; that is, two straight lines having crossed diverge for ever. To open the mind of man for the contradictory of this, another stroke of pure genius was necessary

and has been supplied by Riemann. He suggested as answer to the old question, Is space finite or infinite? that space might be at once unbounded and finite, as in the sphere.

The three possible geometries of uniform space, the geometries of Lobatschewsky-Boylai, of Euclid, and of Riemann, have been co-ordinated through Cayley's projective metrics by Felix Klein, who calls them respectively hyperbolic, parabolic, elliptic. There is not even one eminent mathematician alive who now maintains that the Euclidean, or parabolic, or homaloidal, geometry is the only possible form of space science; or that the space analysed in Euclid's assumptions is the only non-contradictory sort of space. Thus universal space has been pluralised. . . . Charles S. Peirce claims to have established, from astronomical measurements, that our particular space is hyperbolic, is the space first expounded by Lobatschewsky and Boylai.

"TWO PARALLELS CONTINUALLY APPROACH EACH OTHER."

Mr. Halsted proceeds to develop several other esoteric paradoxes, such as—

"The binomial theorem is not always true"; "In general it is not possible to draw a circle through three non-co-straight points"; "In hyperbolic geometry every two parallels continually approach each other"; "That stale stupidity, 'A straight line is the shortest distance between two points,' is equally unavailable for foundation-building."

The shades of innumerable schoolboys whose lives were made miserable because they presciently maintained the "stupidity" of Euclid must be placated at last.

Whether this question in regard to the actual ~~was~~ external reality be ever decided, or however it be decided, the elementary geometry taught in schools will still remain, as has always been, Euclidean.

But even the dullest of non-mathematical boys will derive some comfort from knowing that in the big sphere of science the hoary tyrant has been dethroned.

A Sad Look-out for Bengal.

A VERY lugubrious picture of the state of Bengal is drawn by Mr. F. H. Barrow in the *Calcutta Review*. The Census has, he points out, shown "that all the old parts are in a state of more or less decay, while prosperity and improvement are found only in the rich alluvial Eastern districts, and in the parts of the Western districts where new land is being broken up." His own experience in the last twenty years in and about Bengal villages only too clearly confirms this statement. As a consequence, the population is increasing. "Bengal is raising a paradise for lawyers and a pandemonium for everybody else." He finds the cause in the unfortunate innovation by which the British Government transformed the zemindars—or agents of the Mohammedan rulers appointed to collect for the State a fixed proportion of the produce of the land—into owners with the rights of British landlords. The ownership of village land has hence come to be divided and subdivided, let and sublet, until zemindars, instead of being State officers to promote local welfare, have become mere litigious collectors of rent. To prevent the complete ruin of the province, Mr. Barrow advocates "the restoration of the old system on a scientific basis,"—"fixing rent at a proportion of crops,"—and the forcing back of the landowners of Bengal on the principle of the Hindu joint family, which acts through a head, so that they be allowed to manage their estates through one member "for all estates and tenures the name of only one owner shall be registered."

The moral effect of the present chaos on the proprietors seems to be even more calamitous than the economic.

From the one extreme of State communism, they have been allowed to rush into the anarchy of completely uncontrolled individualism. . . . The present generation of educated Bengalis are in consequence utterly wanting in subordination to authority. Amongst themselves obedience to authority is a virtue little practised, and the faith and reverence which the distinguishing virtues of Hinduism have well nigh disappeared; a result, I think, chiefly due to the utter relaxation of all control over their land affairs by the State.

Indian Salt-tax and Cholera.

THE salt monopoly in India, Mr. J. B. Pennington writing in the *Asiatic Quarterly Review*, declares to be a greater evil than either opium or alcohol:—

A large quantity of salt is even more necessary to life in India, both for men and cattle, than it is in Europe, and we have very good reason to suspect that the want of an abundant supply of salt may be one of the main predisposing causes of the virulence of cholera and cattle disease. It is, at any rate, a very significant fact that cholera is characterised by a deficiency of salt in the blood, and if it should turn out to be a fact that the want of unlimited salt is really a cause of mortality (as I firmly believe it will), the case for the prosecution is simple enough: we destroy untold millions of the wealth of the people in order to gain an annual revenue of about eight millions X rupees.

For want of salt the blood of the people is impoverished, the cattle suffer, the soil is rendered less fertile. He demands the abolition of the tax, and advocates a poll tax as its substitute.

THE WANDERER'S EVENING SONG.

Velhagen for October has an article on the Community of Gabelbach, by Herr A. Trinius. Though it is vain to search in atlases and State handbooks for any reference to Gabelbach, the spot has a fame which many another community must envy. In innumerable songs and pictures it has been celebrated; in occasional verses its fame has resounded; and its first poet was one of the most popular with the German people—Viktor von Scheffel.

THE GOETHE-HOUSE ON THE KICKELHAHN.

The wooden house in which the community holds its meetings stands in the midst of fine, proud, pine-trees, and we cannot visit it without being touched by the charm of German poetry and the silent thought of him who with his being and his songs has endeared to us every foot of the ground—Goethe. Gabelbach is indeed founded on classic soil, for Ilmenau, Gabelbach, and Kickelhahn are all closely associated with the name of Goethe. He often took refuge here, especially when his feelings and his thoughts were centred in Frau von Stein. He lodged in a tower-like house of wood, two storeys high, on the top of the Kickelhahn. In 1870 this building was burnt down, but four years later a faithful reproduction of it was substituted. It was in this curious house that Goethe wrote many of his poems, and from this high place that he addressed his effusions to his beloved, assuring her of his love, and depicted the beautiful scenery of the neighbourhood.

"UEBER ALLEN GIPFELN."

The retreat on the Kickelhahn has another special interest. It was in this house, on September 7th, 1783, that Goethe wrote the charming little "Wanderer's Evening Song," beginning "Ueber allen Gipfeln." The words were traced in pencil on the wooden wall of his room, and thirty years later, while on another visit to the place, he retraced the writing which had meanwhile grown pale and indistinct, and confirmed what he had done by adding "Ren. 29 Aug. 1813." The eve of his last birthday found him once more in his lofty retreat, and when he was looking out into the evening glow, his eye again fell on the words of his song. Now he was deeply moved, the tears rolled down his cheeks, and his lips whispered softly, "Ja, warte nur, bald ruhest du auch!" ("Yes, wait a little, and you too will be at rest!")

AND THE TRANSLATION.

Just four years ago the question of an English translation of the lyric cropped up, and many were the attempts made to give an adequate rendering of it. The late Mr. J. A. Symonds, *e.g.*, "saw that its unapproachable literary excellence depended on its divine spontaneity in the peculiar, instinctive tact with which Goethe had transmitted a certain felicitous mood of emotion into the simplest language, the most wayward rhythms, the most natural rhymes; all governed by a predominant sense of music, compelling the seeming artless verse to take the inevitable form which belongs to some product of nature—shall I say a frost crystal spread across a window-pane which has been breathed upon—or a film deposited on glass by musical tone acting on a fluid?" Mr. Symonds made three versions, all of which he regarded as failures. Longfellow, Miss Constance Naden, Sir Theodore Martin, Rev. Stopford A. Brooke, and many more, have tried their hands at it; yet the lines still seem untranslatable.

Newbery House has only one article this month. With 1894, the price is to be reduced to sixpence.

GOETHE-WORSHIP IN ENGLAND.

THE English Goethe Society, which was founded on February 26th, 1886, has already had many ups and downs. From the study of Goethe's work and thought, the society, in 1891, extended its scope, so that while Goethe is still kept as the central figure, the attention of the members is also directed to other fields of German literature. The substitution of "the work and thought of Goethe and his literary contemporaries" for "Goethe's work and thought" having been rejected by the Manchester branch, a suggestion that the English Goethe Society be dissolved was discussed and negatived. The scope of the society was then widened, the secession of the Manchester branch notwithstanding, with the result that one hundred and twenty-one new members have joined since the proposal to dissolve was made on May 8th, 1891, and in February, 1893, the members' roll numbered two hundred and sixteen. It should also be noted that, besides branches in north, west, and south-west London, there are other important ones at Cambridge, Glasgow, and Edinburgh.

Those interested in Goethe and Carlyle will remember the publication of Goethe's letters to Carlyle. Goethe, as was his custom, had kept copies of these letters, and fortunately the copies were among the archives of the Goethe family bequeathed seven or eight years ago to the Grand-Duchess of Weimar for preservation in the National Goethe Museum. Permission was given to Mr. Froude to make copies of the newly-discovered documents, and the letters were used to illustrate Carlyle's idea of a "World Literature," which formed the subject of Professor Max Müller's address at the inaugural meeting of the society on May 28th, 1886.

To turn to the Transactions, 1891-2, which are edited by the secretary, Dr. Eugene Oswald, 49, Blomfield Road, Maida Hill, W., we note several excellent papers, as interesting to the student of English as they are to the student of German literature; *e.g.*, Mr. R. G. Alford's "Goethe's Earliest Critics in England" and Mr. R. A. J. Mensch's "Goethe and Wordsworth." A very important and attractive paper is that by Dr. Tille on "The Artistic Treatment of the Faust Legend," occupying some seventy-five pages; and another of similar import is "Recent Contributions to the Study of Faust," by Dr. W. C. Coupland. Others, again, deal with Goethe's Optimism, Goethe's Pessimism, Goethe as Minister of State, Goethe's Sonnets, etc., the contributions including charming translations of Goethe's poems by Mrs. K. Freiligrath Kroeker and Sir Theodore Martin, and one of Chamisso's by Mr. C. M. Aikman.

Finally, the reader should turn to Dr. Oswald's appreciative paper on Chamisso, who was described by his countryman, Jean Jacques Ampère, as "a man with a tall figure and long hair, a man of rare gifts, long pursued by a hostile fate, a French *émigré* and Prussian officer, a nobleman and a Liberal, a poet and a botanist, the author of a fantastic novel, and a circumnavigator, a German, yet by birth a Frenchman; in brief—Chamisso."

In the *Deutsche Rundschau* for November, Dr. Hanslick has begun a new series of musical reminiscences, which promise to be as interesting as those he has already published.

THE *Revue de Famille*, now called *La Vie Contemporaine*, maintains its high position. The number for October 1st was devoted to Marie Antoinette; and that for November 1st includes an interesting article on Gounod and Mozart's "Don Giovanni," by M. Camille Saint-Saëns, the eminent French composer.

A SCANDINAVIAN NOVELIST.

THE November number of *Samtiden* is, from cover to cover, devoted to Jonas Lie, and, besides being a graceful tribute to the genius of the great writer, is a welcome and valuable contribution to the magazine literature of the day, giving as it does a perfect portrait of the man who, with Björnson and Ibsen, forms for all time an Orion's Belt in Norway's literary firmament. The first study of Lie—for there are several—is given by the eminent writer Herman Bang. In character and person he is Ibsen's Dr. Stockmann—as large of heart, as genial of thought, as broad minded, as blind. Whoever knows Stockmann knows Jonas Lie. And, save for its mistress, the house of Lie is as the house of Stockmann, too.

By request of the editor of *Samtiden*, Jonas Lie himself gives in the same number the portrait of his helpmate, and an intensely interesting portrayal of her exquisitely womanly character and intellectual gifts. They are of the same age, were betrothed at nineteen, married at six-and-twenty, and have lived for three-and-thirty years an ideal life of love and sympathy together.

WHAT HE OWES TO HIS WIFE.

Like Stuart Mill, he ascribes all that is best in his writings to his wife:—

With the exception of "Nordfjordhesten," "Slagter-Tobias," and a few Adventures, I do not know the book in which she has not been my trusted guide as regards style and, so to speak, my fellow-worker through every chapter, erasing all extravagance, desiring this or that to be written and, under necessity, even writing it herself. It has passed through her sieve; from an artistic point of view my creative powers were undeveloped, and I depended rather on mere chance than on keen and certain sight. That my sea-novels received solid shape is owing to her more intense and developed artist-feeling and clearer artist-eye. The plot of "The Pilot and his Wife" I had from her . . . She might well have had her name on the title-pages of my books as my collaborateur. It was, however, not the thing for a "Frue" of our times to take her rightful place in publicity—her unswerving taste was to content herself with her own consciousness that she was her husband's spiritual equal. . . . But, now that we are entering on our sixtieth year, it seems to me it is time I told that, in all that it is finest and best I have written, she has her part.

HOW "KVAERN-KALLEN" CAME TO BE WRITTEN.

Among the many vividly interesting articles in this Lie-number is one by Erik Lie, telling how his father came to write "Kvaern-kallen." It was in the month of November. They had just arrived at Rome, and had homed themselves at 52, Via di Capo le Case. Grey, dirty, sleet-weather, cheating and vexations of all sorts, had combined to render the first impression particularly disappointing. "Inside the house," says Lie, "we were plagued by fleas—not such little miserable country fleas as we know here in Norway—no, great, fat, shining beasts of prey that grunted like little pigs when one dragged them by the ears to the washbasin. And not one or two or ten, but regiments . . . But, worse than fleas and beggars and drivers, was an old witch of a servant, named Lovisa Sorentina. She was a genuine Roman hag, with one solitary fang in her gums, and hands like claws. She was lazy beyond all measure, and so slow in everything that we had at last to have our boots cleaned by a street shoeblack." Well, to cut the story short, and forego the temptation to give the whole of it in Erik Lie's own fascinatingly vivid style, this charming old lady, who was a pitiless thief and a confirmed drunkard into the bargain, one lucky day fell

downstairs and disabled herself, and the overjoyed Lie instantly seized the opportunity to get rid of her.

A FURIOUS HAG.

But the old witch got life in her then, and, on hearing that she was discharged, flew up at them like a fury, and hurled a Niagara of round fat curses over their heads. She stormed and thundered, not in ordinary fashion, but in majestic Italian, with eyes agleam and her claws in such swift motion that her fierce gesticulations could only be rivalled by the flood of abuse and menace that gushed and foamed and hissed from her lips. She was magnificent in her rage. Her attitude, her gestures were splendid as those of some glorious tragedy-queen; and, long after the door had been locked upon her, her guttural lashing invective rose from the stairway like some awful decree of damnation. Jonas Lie was deeply and almost morbidly impressed.

It was a night some time later that he was roused from sleep by a strange, horrible song. He rose and looked out of the window. It was two o'clock, and the wineshop over the way had long been closed. But, in the middle of the dark, deserted street stood a solitary being with a turned-down felt hat and a pair of long arms fiercely gesticulating up at the sky. And this being was singing in a rusty giant-voice, raw with wine—was "screaming his heart's-blood into his mouth," wildly and more wildly yet, horribly, terribly, and more and more satanically in the still night. Jonas Lie listened with all his senses, fascinated; there was a gigantic majesty over the man. He was almost on the point of waking his wife, but refrained. The lamps in the street had been extinguished—no soul was about save this creature, whose wild song bellowed forth hate.

THE WITCH'S PROXY.

He had been sent by that old witch of a servant to confirm her curses, and Jonas Lie was to be put to death, pierced, tormented, burnt—hau, hau, hau!—scoured, broken limb from limb; his people cursed to the ten thousandth generation, and evil given for good through all eternity; he was to be flayed alive and, in the biggest kettle of hell-fire, boiled in burning oil—hau! hau! hau!—the kettle boils! the kettle boils! the kettle boils! Jonas Lie paled where he stood. It might be a forewarning of death, this! Ten minutes more of blood-curdling curses, and then the mystic being vanished like a shadow round the corner, and peace reigned once more. The morrow came, and the next, and yet another, and Jonas Lie lived on. The days flew by in merriment—now an evening spent with Arne Garborg, now an evening with the artist Ross, and so on. "Winter-passed as through a sieve, and our nine months' stay in Rome was marked only by stronger and stronger flea-bites!" But on the night before their departure, lo! the peaceful slumber of Jonas Lie was once more broken by the weird song of curses, and there in the deserted street stood that mystical ally of the witch, with colossal scorn and menace in his throat! But this time triumph mingled with the abuse and threat—triumph that the foreigner was leaving, was leaving the place—going far over the mountains to the people whose blood is green, and whose God is Satan! Branded like a slave, he was fleeing from Italy's sunshine, and the Romans would see him no more before their eyes—would see him no more—would see him no more—ho! ho! ho! ha! ha! ha!

The next morning the Lies left Rome, and travelled homewards, and some two months afterwards there grew out of the witch's curse and other Roman reminiscences the story called "Kvaern-kallen."

THE ITALIANS OF TO-DAY.

AS SKETCHED BY A FRENCH ARTIST.

IN recent numbers of the *Revue des Deux Mondes* M. René Bazin has published three interesting articles on "The Italians of To-day." They are very eloquently written; but so many fine descriptions of Rome and the Campagna exist in literature, that the practical details of architecture and husbandry contained in its pages are best worth specifying.

ROME.

Rome is in reality quite a small town, and during the last twenty years it has been struggling in the grip of an alien civilisation. Its population has nearly doubled since 1870; for it had then 226,000 inhabitants, and now can boast of nearly 400,000. Out of four people walking in a Roman street, barely half are Romans. And to house this surplus of strangers, the old city has been pierced as by dividing knives, an attempt being made to construct new streets on a regular plan, of which the chief example is the long handsome Via Nazionale, which possesses undeniable beauty, but might just as well be a thoroughfare in Turin or Milan. Baron Haussmann was in Rome when the Italians became masters of the city, and the trace of his transforming hands is still plainly to be seen. The fever of speculation which seized upon the Roman nobles, and made them play into the hands of building firms, and the devastating ruin which fell upon the spiders as well as upon the flies, has become matter of history. Old travellers who remember the Rome of their youth wail over the desecration, and say that a unique result of ages has been destroyed for the creation of a handsome town like any other town, that the new houses are blindingly white or unpleasantly yellow, and the pity of it is, that innumerable buildings are left unfinished, the openings walled up with boards, and sometimes literally inhabited by squatters. In some instances fine frescoes adorn the walls of half-built buildings, but the dire fate of commercial failure fell upon the masters and men, and a washerwoman may be seen carrying her pile of linen up the unfinished stairs. M. Bazin tells us that the army of 50,000 workmen, contractors, artisans and speculators put to flight by the crisis are gone, and there is no sign of their return.

THE CAMPAGNA.

Leaving Rome, which must ever possess the Coliseum and the Vatican, the seven Basilicas, the rushing fountains of the past, and whose new streets must be endured with resignation, M. Bazin bids us take our stand with him on the steps of St. John Lateran and look across the Campagna. The Agro, or vast land surrounding Rome on every side, is full of tormenting questions and the subject of most contradictory statements. Enterprising husbandmen of all ranks try their hands on it, but it is full of fever, and in the old Roman literature we find lamentations over the malaria which might have been written yesterday, and amidst the ruins of ancient suburban houses of the larger sort are votive stones to the great goddess Fever. What the Popes did, what the Italian Government has done or tried to do, and the story of the immense emigration of Italians to foreign countries, notably to South America, leaving this great and almost uncultivated desert at their very gates,

is told very powerfully and picturesquely by M. Bazin. While the rural Italians are leaving their native land, the mountaineers of the Abruzzi are being brought down an hordes to work on the great estates. These poor people receive the smallest pay; they are contracted for as if they were all but slaves. M. Bazin's article is full of feelings of picturesque description. Rome enthroned in its Campagna is the most striking and poetical place in the world; but there appears to be a spell upon all attempts to make it a satisfactory home for modern civilisation. Crops there are, and herds of cattle, and men and beasts compose endless unsought pictures; but the genius of the people and place seems to refuse assimilation, and the tide of life beats up against those ancient ramparts and is worsted in the struggle.

NAPLES.

M. René Bazin's concluding article on "The Italians of To-day" deals with the South of Italy, and opens with a piteous picture of Naples. The older portions of the town, those inhabited by the poorest part of the population, were always narrow and squalid, and the piercing of new streets has much worsened their condition. As so often happens, the artificial creation of a workman's quarter has not answered; the new flats are taken by the better class of artisans, and the world of small dealers, sellers of fruit, fish and macaroni, and the hand-to-mouth classes driving small trades, or living on beggary, cannot move into a distant quarter of the city without dislocating their precarious industries. When the cholera seizes on the older streets of Naples it carries off a thousand victims daily, and M. Bazin leaves on the mind of the reader an impression that nothing effectual is being done in the way of remedy.

M. Bazin gives a terrible picture of the condition of the Neapolitan poor, who actually see day by day great palace-like houses erected, not so much in the place of, but absolutely above, the miserable hovels which represent to them home. In many cases whole families are turned out at a moment's warning when the edifice above them is advancing near completion.

THE DESERTED GARDEN OF EUROPE.

The country districts of South Italy are in an even worse plight, and nothing is left for the peasants to do but emigrate to the South American States; more than eighty thousand men went in one twelve months, yet M. Bazin observes that in Calabria he looked out from the train on more than three hundred kilometres of lonely uncultivated districts. As for the country populations, at Reggio, where bergamot scent is distilled, the workmen go to bed at five in the afternoon, rise at ten, and work all the night through, and until three the next afternoon. For these fifteen hours' hard work in the scent factories they are paid the sum of one shilling a day. Their food is naturally innocent of meat or wine; breakfast being composed of pepper-pods dipped in oil and eaten with black bread.

Whether modern Italy can ever be brought successfully into the ways and methods of the nineteenth century remains to be seen. The transition from the mediæval to the modern world has been too sudden, the country has not developed from within, all so-called improvements having been imported from without, and as yet alien to the genius of the Italian people. As is but natural from his point of view, the author of the article looks forward to a day when, discarding the Triple Alliance, Italy will awake to a better tradition, and seek both prosperity and safety by entering into amicable relations with France.

A GRAND OLD MARKSMAN.

SIR HENRY HALFORD, of Wistow Hall, Leicestershire, is styled by Mr. Harry How, in a bright "illustrated interview" in the *Strand*, as "The Grand Old Man of Shooting." Among his twenty-one prizes are "those of the Albert at Wimbledon in 1862 and the same trophy at Bisley in 1893, a record lapse of thirty-one years!" He was eight years old when he had his first gun, and last year, on his sixty-fifth birthday, "he adjourned to the field adjoining the house, which makes a capital range, and rattled off a dozen or two bull's-eyes." He is himself "a practical gunmaker."

THE COLOUR OF "THE BEST SHOOTING EYES."

"Whilst he was handling the tobacco," says the interviewer—

I noticed the difference between the shape of the right hand as compared with the left.

"Ah!" said Sir Henry, in reply to my query, "you can always tell the hand of a man who has shot much. Look at

SIR HENRY HALFORD.

that second finger—it is quite disjointed; indeed, the whole hand is turned. Then many men bear the kiss of the rifle butt on the jawbone. The eyes, too, are a guide in singling out your rifle shot. I always think that blue or grey are the best shooting eyes; that's why the Scots are so successful at the target, for apart from their thoroughness in all they undertake, there are more blue eyes amongst them. An eye with a very small pupil is a great advantage. Brown eyes seldom come in; the marked exception to this, however, is Lamb, who is as good a shot as any man, and his are chestnut brown."

Then I learnt that amongst shooting men the larger proportion of them are non-smokers. The veteran is a persistent smoker, and, practically never shoots without a pipe in his mouth. "Let me put in a plea for the pipe," he said, merrily. "I was once shooting in one of the matches for the Elcho Shield—and shooting very badly. 'Why, where's your pipe?'

somebody standing by asked. 'Light up—you'll do better.' And I did. I hadn't been smoking for some little time, but with the first few puffs my very next shot was a bull's-eye!"

"The primary necessities to make a good shot are nerve, carefulness, a calm temperament, eyesight and power of concentration. I don't think you will find any man who is not a steady liver last long at shooting. Let young volunteers remember that the student of habit and a good shot must run together."

HOW OXYGEN IS LIQUEFIED.

AN instructive "interview with Professor James Dewar," of the Royal Institution, the liquefier of oxygen and the solidifier of nitrogen and air, is contributed by Mr. H. W. J. Dam to *McClure's*, under the title of "Four Hundred Degrees below Zero." "The undiscovered North Pole" of chemistry is said to be -461° F. (-274° C.), which is regarded as "the zero of absolute temperature," and supposed by some to be "the temperature of interstellar space, the normal temperature of the universe." Professor Dewar thus described his explorations in this more than Arctic direction:—

The process of liquefying oxygen, briefly speaking, is this. Into the outer chamber of that double compressor I introduce, through a pipe, liquid nitrous oxide gas, under a pressure of about 1,400 pounds to the square inch. I then allow it to evaporate rapidly, and thus obtain a temperature around the inner chamber of -90° C. (-130° F.). Into this cooled inner chamber I introduce liquid ethylene, which is a gas at ordinary temperatures, under a pressure of 1,800 pounds to the square inch. When the inner chamber is full of ethylene, its rapid evaporation under exhaustion reduces the temperature to -145° C. (-229° F.). Running through this inner chamber is a tube containing oxygen gas under a pressure of 750 pounds to the square inch. The "critical point" of oxygen gas, that is, the point above which no amount of pressure will reduce it to a liquid, is -115° C., but this pressure, at the temperature of -145° C., is amply sufficient to cause it to liquefy rapidly. In drawing off the liquid under this pressure, I lose nine-tenths of it by evaporation.

THE MAGICAL BLUE LIQUID.

Mr. Dam was shown a bottle nearly full of fluid oxygen:—

It was one of those moments which Faraday would doubtless have regarded as solemn. To behold, for the first time, a liquid which your professors of chemistry have assured you was a gas and always would be a gas, is an experience which does not occur many times in a lifetime. After that, a sight of perpetual motion or the square of the circle would leave you calm. To know, furthermore, that this strange gas, which is the prime agent of all life, which is eight-ninths of all water, and three-fourths of the entire earth, has been laid captive by science, reduced to a form which cannot fail to shed a flood of light on any number of abstruse problems in chemistry and mechanics, excites a deeper feeling. The pale blue liquid, which is strangely lustrous, seems truly magical.

Ozone liquefied is "as dark as concentrated indigo."

"THE DEATH OF MATTER."

By evaporating this liquid, the professor is able to solidify air under pressure at -207° C. (-340° F.), and nitrogen (which becomes a white crystalline substance) at -210° C. (-346° F.):—

"As we approach the zero point of absolute temperature," said he, "we seem to be nearing what I can only call the death of matter. Pure metals undergo molecular changes which cannot yet be defined, but which entirely alter their characteristics as we know them. Tensile strength, electrical resistance, in fact, the whole character of the metal as we are acquainted with it, appears to change."

The Professor hazarded the conjecture that "the strange white and shining night clouds which have puzzled the astronomers were composed of carbonic acid gas frozen solid."

IS RHETORIC WRECKING IRELAND?

THE Fortnightly reviewer who signs himself "X," gives us this month his second pessimistic picture of "the Ireland of To-day." He entitles it "The Rhetoricians of Ireland." It is drawn with caustic vigour. "There is (he says) common-sense in Ireland, but it almost never gets a chance." It is mostly checked and choked by that "disastrous speciality—the visitation of oratory."

The rhetoricians of Ireland eat one another up at such a pace that a decade suffices for a generation . . . Each succeeding group rises, talks itself into ascendancy, and culminates either in securing office or in being broken by prison and exile, or on the wheel of public disfavour. Sundry general rules are observable, too, in the alternations. A given series of silver-tongued place-hunters will by reaction produce a crop of violent reformers . . . It is a story of talk, practically nothing but talk.

THE CHANGE UNDER PARNELL.

In this light the chief Irish movements of the last hundred and twenty years are reviewed:—

From Flood to Isaac Butt the controlling idea behind every representative Irish voice had been to produce an effect upon England and the English. Sometimes the design was to cozen or seduce, again to awe and terrify. Now the thought was to curry immediate favour, now to create a dazzling impression of wit and eloquence, now to build up that solid sort of repute which suggests a judgship.

Biggar and Parnell introduced a new era. They imbued their "young bloods" with the "spirit of scorn for English applause and of distrust for English assent." "It is, perhaps, the highest proof of Parnell's power that for six years he was able to keep this big rhetorical force under tolerable control." "The discipline was a rigorous and exacting one."

WHAT UNMUZZLED THE RHETORICIANS.

The result was deeds, not words: the conquest of the English Liberal Alliance, and the restoration of belief in Ireland as a nation. But—

The fatal trouble was that the new "union of hearts" and the old contempt for English opinion could not be brought under the same blanket. . . . This release from the tension of discipline unmuzzled the rhetoricians—and in a very short time the Irish Nationalist party had gravitated to pretty much the level of the other Irish parties that had gone before.

Messrs. Dillon and O'Brien are selected as initiators of this "reversion to type." When Parnell fell, and they were in gaol, "the practical men," the men of the "latent common-sense in the country," "held the national ship off the rocks," and got the Nationalist party into capital fighting trim. With the release of the two prisoners began—

"the triumph of the rhetoricians within the party organisation." "There is no member of this majority who has to his credit a single clause of effective legislation. Collectively they have done nothing but talk and write during their dozen years of public life." "The old taint of self-seeking has reappeared." "There are charges of corruption already in the air, and it will be a matter for surprise if, during the lifetime of the present Parliament, a formal rupture does not take place."

CAMEOS IN EPIGRAM.

Then we are presented with a series of what purport to be photographs in epigram of the Irish leaders. "Exaggeration is said to be an Irish failing; with Mr. O'Brien it is a disease." At first "he impressed his associates as a modest man and a good fellow." Then "he blossomed forth suddenly as the most tremendous egotist of anybody's acquaintance" who is yet sin-

cerely conscious of his own utter unpretentiousness. Mr. Dillon "is a narrow man, self-centred to a remarkable degree, and with an extremely small stock of ideas." Of Michael Davitt we are told—

where other men carry written the lessons gained in human contact, and acquired knowledge of their fellows, he has a blank space. He does not get on smoothly with others; he picks his co-workers badly; he gets jealous of the wrong people, and is perpetually looking for figs among the thistle-spikes.

Mr. Edward Blake, who was imported from Canada, will go back again some time at the spontaneous suggestion of an entire Irish Party . . . It was hardly worth while to go so far at this late day for an inferior imitation of Butt.

Mr. T. P. O'Connor's plans and ambitions "do not bear any appreciable relation to Ireland whatever":—

This self-constituted Directory, having gathered into its hands the reins once held in Parnell's vice-like grasp, discloses no disposition to drive anywhere. Its sole discoverable idea is to stop still and make speeches from the box-seat.

Nevertheless "X," declares "the defeat of the practical men" to be "more apparent than real."

How to Find the Money for Old Age Pensions.

MR. M. Q. HOLYOAKE reinforces in the *Humanitarian* his favourite scheme for "the taxation of pleasure," with a view to providing the funds requisite for Old Age Pensions. He proposes to lay a tax of one penny in the shilling on every ticket for admission to theatres, race meetings, and other places of amusement. He quotes a number of favourable opinions he has received, among others, from the late Lord Iddesleigh, the late Lord Addington, the Earl of Meath, the Bishop of London, Lord Compton, Mr. Herbert Gladstone, Mr. Thomas Burt, and Rev. H. Price Hughes. He urges as the advantage of such taxes that they fall on the surplus money of the people; on unproductive labour, and would hardly be felt at all.

Anthropometry and Social Reform.

ANTHROPOMETRY is a science generally connected with a method of criminal detection, but Mr. Charles Roberts, in the *Humanitarian*, applies it to social and economic questions. He points out its value for differentiating the various races of mankind; the rate of growth of children: the influence of different occupations, and of town and country life, etc. He declaims against the unfounded belief that three generations of a family cannot survive London:—

Anthropometric inquiries do indeed show that the physique of town-bred people is not so good as that of the agricultural districts surrounding them, but even to this rule London is an exception. The average stature of Londoners is five feet seven inches, only half an inch short of the average of the whole kingdom, and higher than the rural population of all the home counties, all Wales, and of ten English counties like Wilts, Bucks, and Salop, whose population is almost entirely agricultural.

The measurement of factory children in 1833, and again of the same class of children in 1873, showed that—

there was in the intervening forty years a decided gain in stature, and a whole year's increase in weight in children of corresponding ages—a child of nine years weighing as much in the later (1873), as one of ten years of age in the earlier period (1833).

The children reared in schools, founding hospitals, and similar institutions, are shown by anthropometry to be very much inferior in stature and weight to the boys of their own class, living in their own homes.

MR. FRANK LOCKWOOD.

OF "Lions in their Dens," Mr. Blathwayt chooses for this month's *Idler* Mr. Frank Lockwood, Q.C., Radical M.P. for York, whose genial skill as humourist and comic

MR. LOCKWOOD, Q.C.

artist is well known. The article is enlivened with several amusing sketches by the subject himself. Mr. Blathwayt says:—

Mr. Lockwood is a typical Yorkshireman, and that is synonymous with saying that he is a typical Englishman of the very best kind; to use a popular slang phrase which will exactly express my meaning—he's as good as they make 'em. A great, broad-shouldered fellow, standing at least six feet two in his socks, with a handsome, well-cut, clean-shaven, sunburnt face; a breezy, outspoken, generous-hearted man, full of life and energy and good-humour, and withal a keen, clever, and accomplished man. It was pleasant to note the manner in which he and his wife, who is no whit behind him in popularity, were received by high and low.

A UNIONIST IDEA OF A HOME RULE JUDGE.
(Drawn by Mr. Lockwood.)

SPECIMENS OF FORENSIC FUN.

Here are a few of the stories with which Mr. Lockwood rewarded his interviewer:—

"I was defending a man at York once, who was accused of stealing cattle, 'beasts' they call them up here. I said to a

witness, 'Now, my man, you say you saw so and so, how far can you see a beast to know it?' 'Just as far off as I am from you!' he smartly replied. You may imagine the laugh there was against me."

"A man, some years ago, was had up for stealing a horse. 'Yours is a very serious offence,' said the judge to him very sternly; 'fifty years ago it was a hanging matter.' 'Well,' replied the prisoner, with a certain logical reasonableness, 'fifty years hence it mayn't be a crime at all.' . . . The man was had up for stealing a spade. . . . The magistrate before whom the case was being tried was a stupid, but a well-meaning, conscientious old fellow as ever lived. He carefully looked up 'Archbold's Criminal Law' to find a precedent on which he could convict and punish the man. But he was unable to do so. 'I can't find anything under the word "spade,"' said he, 'although I see that a man was convicted and severely punished for stealing a shovel. You have had a very narrow escape, but you may go this time.'"

THE WORKING-MAN MAGISTRATE.

Mr. Lockwood believes that "as long as you have magistrates appointed as they are now, they ought to be selected from all classes."

As Recorder of Sheffield I have had considerable experience of magistrates, and one of the best I know is a working-man magistrate. As a rule they are the *fine fleur* of the working classes, and they are quite equal, intellectually, to the ordinary county gentlemen who sit with them on the bench."

MADAME PATTI'S PROUDEST MOMENT.

"PATTI at Craig-y-Nos" is rapturously described by Mr. Arthur Warren in the November number of *McClure's Magazine*. Mr. Warren's visit was paid during a sort of family gathering, and he tells how they all joined in singing "For She's a Jolly Good Fellow," and how even

Patti joined us in the refrains of a medley of music-hall airs, beginning with London's latest mania, "Daisy Bell, or a Bicycle Made for Two," and winding up with Chevalier's "Old Kent Road" and the "Coster's Serenade," Coburn's "Man that Broke the Bank at Monte Carlo," and the transatlantic "Daddy Wouldn't Buy me a Bow-Wow."

"SUCH A PRETTY SPEECH" FROM THE PRINCE.

With the audacity peculiar to the interviewer, Mr. Warren asked her to specify "what had been the proudest experience in her career."

"For a great and unexpected honour most gracefully tendered," said she, "I have experienced nothing that has touched me deeper than a compliment paid by the Prince of Wales and a distinguished company at a dinner given in honour of the Duke of York and the Princess May a little while before their wedding. The dinner was given by Mr. Alfred Rothschild, one of my oldest and best friends. There were many royalties present, and more dukes and duchesses than I can easily remember. During the ceremonies the Prince of Wales arose, and, to my great astonishment, proposed the health of his 'old and valued friend Madame Patti.' He made *such* a pretty speech, and in the course of it said that he had first seen and heard me in Philadelphia in 1860, when I sang in 'Martha,' and that since then his own attendance at what he was good enough to call my 'victories in the realm of song' had been among his most pleasant recollections. He recalled the fact that . . . his wife had held up little Prince George, in whose honour we were this night assembled, and bade him kiss me, so that in after life he might say that he had 'kissed the famous Madame Patti.' And then, do you know, that whole company of royalty, nobility, and men of genius rose and cheered me and drank my health."

Madame Patti, remarks her visitor, "is as absolutely unspoiled as the freshest *ingénue*."

THE PARLIAMENT OF RELIGIONS.**THE "HOLY INTOXICATION" OF A MODERN PENTECOST.**

"THE Dawn of a New Religious Era" is the title given to Dr. Paul Carus' article in the November *Forum* on the World's Parliament of Religions. After citing a number of characteristic utterances, Dr. Carus concludes that "the Parliament of Religions deserves to rank among the most noteworthy affairs of this decade":—

It is evident that from its date we shall have to begin a new era in the evolution of man's religious life. It is difficult to understand the Pentecost of Christianity which took place after the departure of Christ from His disciples. But this Parliament of Religions was analogous in many respects, and it may give us an idea of what happened at Jerusalem nearly two thousand years ago. A holy intoxication overcame the speakers as well as the audience; and no one can conceive how impressive the whole proceeding was unless he himself saw the eager faces of the people and imbibed the enthusiasm that enraptured the multitudes. The whole movement indicates the extinction of the old narrowness and the beginning of a new era of a broader and higher religious life.

Whether or not the Parliament of Religions be repeated, the fact remains that this congress at Chicago will exert a lasting influence upon the religious intelligence of mankind. It has stirred the spirits, stimulated mental growth, and given direction to man's further evolution. It is by no means an agnostic movement, for it is carried on the wings of a religious faith and positive certainty.

The official record of the Parliament of Religions will be published in this country at THE REVIEW OF REVIEWS office. It will be in two large volumes, price 20s. net.

THE BROTHERHOOD OF CHRISTIAN UNITY.**"FEDERATION OF THE WORLD BEGUN SEPTEMBER 21st."**

MR. THEODORE F. SEWARD, of East Orange, New Jersey, sends me a copy of a manifesto which the Parliament of Religions has evoked from "The Brotherhood of Christian Unity." This declares:—

The Brotherhood of Christian Unity has two aims, and leads to two results:

1. It supplies through its form of enrolment a basis upon which all who desire to follow Christ in serving God and their fellow-men, will constitute a Recognised Brotherhood in any part of the world.

2. The formula is a bond of Union for practical work in any city, town, or community. It is proposed to organise, everywhere, societies under the title of "Christian Citizens Leagues." These leagues will undertake every form of work that requires a co-operation of all the moral and spiritual forces of a community. The Brotherhood does not antagonise churches or any other existing institutions, nor does it seek to do the work already accomplished by them. It helps every good cause by developing a spirit of union and co-operation.

Various representative members of the Parliament of Religions, including Hon. Chas. E. Bonney, President of the World's Congress Auxiliary, Dr. J. H. Barrows, Chairman of the Parliament, Dr. Augusta A. Chapin, "Chairman Women's General Committee World's Parliament of Religions," and other leaders, of many Churches and races, signed the following declaration:—

Feeling it desirable to crystallise, and as far as possible to perpetuate, the remarkable spirit of unity which has characterised the World's Parliament of Religions, we hereby give our approval of the formula of the Brotherhood of Christian Unity as a suitable bond with which to begin the federation of the world upon a Christian basis. The formula is as follows:—"For the purpose of uniting with all who desire to serve God and their fellow-men under the inspiration of the life and teachings of Jesus Christ, I hereby enroll myself as a member of the Brotherhood of Christian Unity."

Mr. Seward observes that, "While the religious papers

made small mention of the event, the secular Press of America very widely announced, often with editorial comment, that the federation of the world was begun at Chicago September 21st, when this declaration was read before the Parliament of Religions."

"THE UNIVERSITIES CAMP."

AN admirable development of the "pious picnic" is the "Universities Camp for public school boys," of which the first "report and souvenir" has come to hand. The promoters recognised the obvious fact that school boys entertain rather poor notions of religion as a claimant for manly respect and reverence. They decided to do something towards rectifying this misconception by forming a camp, collecting as many public school boys as possible under canvas, providing them with their favourite sports, and bringing them throughout under Christian influences. They asked 'Varsity men, military men and others to become officers and to take each a tent under his charge. "Would it not," they reflected, "appeal strongly to the school boy's mind if men who could tell of thrilling battle-scenes spoke to them of Christianity; if a 'Varsity Blue told them of Christ?"

The scheme was successfully carried out at Rustington, near Littlehampton, in Sussex, last August. The party was seventy in number, including twelve officers, among them Major Lieberman as commandant. Canon Taylor Smith was chaplain. Dr. Gunnery reports as visitor:—

"We had every sport; boating, under the control of officers, swimming, fishing, cycling, jumping, and even football. During the whole camp we never saw anyone look discontented or unhappy, and we never heard a grumble about anything. . . . Of course the fellows talked about the services and the men who spoke at them, and I know that a deep effect was made on most, if not all. Everyone was struck by the manliness of the men who were there to tell them of Christ, and there was no attempt to stuff religion down their throats."

The secretary is Mr. Boyd Carpenter, Selwyn College, Cambridge.

THE RAILWAY REFORM ASSOCIATION.

THAT indefatigable Railway Reformer, Mr. J. H. Watson, whose agitation, a quarter of a century ago, for the adoption of uniform railway rates for parcels, is said, by his friends, to have prepared the way for the Parcels Post, has succeeded in incarnating his cause in an association, of which, fitly enough, he is honorary secretary. Here is the Society's programme:—

The Railway Reform Association exists for the public advocacy of—(1) The State purchase of railways in Great Britain and Ireland as the primary object, and in the second place to hasten on railway and postal reforms. (2) A central board of control in London for all the railways in Great Britain, and a central board of control in Dublin for all the railways in Ireland. (3) The construction of a "through central railway station" in London, whereby the whole of the different railways would be united. (4) The abolition of the present railway monopoly; that the "iron roads" should be made as "free" and accessible to the public as possible. (5) An immediate reduction in the present exorbitant charges for the conveyance of goods. (6) The establishment of third-class season tickets at reduced and uniform fares. (7) An entire re-arrangement of railway traffic; to issue Government coupons instead of the present ticket system, available on all railways at any date, and to protect the interests of members of the association. (8) To improve postal facilities by railway, and to secure a reduction in the charges for all inland letters, telegrams, &c.; to reform the tariff by parcels post, as well as by the railway companies.

The Central Office is 9, Palace Chambers, 9, Bridge Street, Westminster.

CAN MUSIC DESCRIBE SCENERY?

"How far music is capable of suggesting scenes which the composer may wish to represent, or of assisting the imagination to realise scenes which may be described by words," is the interesting question discussed by "W. H. T." in *Macmillan's*. The writer is disposed to answer in the negative.

It appears that there is a similarity between the effects of sight and of sound, but it would seem probable that, as the bodily organs of the two senses are distinct, so there are corresponding mental and spiritual faculties appropriated to each which cannot be affected by the other.

He is prepared to grant "that a conventional language could be invented, or might grow up by degrees, by means of which a great variety of ideas might be described by music;" but he is concerned with "the present state of the art." "For my own part," he says,

I do not think that the mind is capable of enjoying to the full simultaneously the beauties of sight and those of sound. . . . In contemplating such a scene as that of the Jungfrau the entire attention is absorbed, and one could not while fully taking in its loveliness, at the same time fully appreciate the finest music; and in the same way, when listening to perfect music, one's faculties are too much occupied to be capable of at the same time fully appreciating such a scene of beauty.

The inquiry ends with advice to the musician to satisfy himself with the limits naturally marked out for his art:—

Surely the most ambitious musician has scope wide enough to exercise the fullest powers of his genius and his imagination. Let him be content to leave to the painter and the poet the description of sunny lands and starlit skies, of placid lake and rugged mountain, of peaceful meadow and stormy ocean. The attempt to depict such scenes by musical sounds must fail in the present state of his art, and can only be successful in the future at the cost of genuine musical expression.

These generalizations of "W. H. T." seem to overlook differences in temperament. There are some men to whom the best music is also the mental vision of nature in its various guises. A nocturne of Chopin's affects them almost precisely as does one of Wordsworth's "Evening Voluntaries."

THE SECRET OF GREEK POETRY.

"THE Permanent Power of Greek Poetry" is traced by Professor Jebb in a recent number of the *Atlantic Monthly* to the fact that it appealed to hearers rather than to readers. Like the preacher and the orator, the early Greek poet was obliged to be in touch with his audience:—

Thus the Greek poetry of the great ago was not merely inspired by life; it was regulated by life; the instinct of the hearers was a restraint operating upon the poet, a safeguard against affectation or unreality. . . . A broad line separates that age, in respect of its poetical work, from every other. In no second instance has the world seen the most perfect art of expression joined to such direct sympathy with the living soul of the people whose mind was thus interpreted.

The true revival of a sense for Greek literature is placed by Professor Jebb at the latter part of last century. The "classic revival" was Latin rather than Greek until then. Then, however, the study of Greek art and the reaction from conventional classicism led men to the freedom and charm of the Greek intellect. "Goethe and Schiller are representatives of the new impulse."

HELLENISM AND HEBRAISM.

Passing to consider the late Matthew Arnold's famous antithesis, Professor Jebb remarks:—

Though there is a profound difference, there is no necessary antagonism, between the ideal, broadly described as Hebraic,

and the permanent, the essential parts of Hellenism. . . . In respect to Hebraism Milton illustrates this. By temperament no less than by creed, Milton was a Puritan of the higher type. . . . Yet no one familiar with the best Greek poetry can read Milton without feeling what its influence has contributed to his genius; it has helped to give him his lofty self-restraint and his serenity.

There is no inherent conflict between true Hellenism and spiritualised Hebraism, such Hebraism as has passed into Christianity. Such a notion could be entertained only where the apprehension of Hellenism itself was superficial or defective. The spirit of the highest Greek poetry, as of the best Greek art, is essentially pure; to conceive it as necessarily entangled with the baser elements of paganism is to confound the accidents with the essence. . . . So far from being adverse to those religious and ethical influences which are beyond the compass of its own gift to modern life, it is, rightly understood, in concord with them, inasmuch as it tends to elevate and to refine the human spirit by the contemplation of beauty in its noblest and purest form.

THE RED MEN'S SNAKE DANCE.

PROFESSOR H. KELLAR communicates to the *North American Review* for November a graphic study of "Magic among the Red Men." He tells of "the strong religious nature of the North American Indian, his marvellous confidence in and reliance upon the Great Spirit, whose worship is almost the same in all the great Indian families and tribes in North America." He is convinced that "few races at any time in the history of the world have been more powerfully moulded by their religious beliefs than the American Indian." The word medicine as used by the Indians means "magic, supernatural knowledge, inspiration, and the use of amulets and charms," and the medicine-man wields extraordinary power over his tribes. Sitting Bull was no war-chief—only high priest or medicine-man. After narrating how the Red men charm and capture the rattlesnake, Mr. Kellar thus vividly describes the snake-dance:—

A gigantic attendant whose face was completely hidden by his handkerchief, and whose body was hideously painted, stood at the snake cage and as each pair of braves marched past him thrust his naked arm into the cage, and jerked from it a writhing serpent which he handed to the buck. The snake dancer, reaching forward his hideously marked visage, seized the snake by its middle in his teeth. The serpent struggled wildly, and his human captor, gesticulating with both hands, joined at once in the solemn rhythmic movement in which after each had been supplied with his own particular rattlesnake the entire hundred and thirty were soon gyrating.

Upon the cliffs around them the entire Moqui nation was seated, dumb with religious awe. No sound came from that grim audience. Nor was there aught to break the horrible stillness of the place except the hissing of the serpents and the rattling of the pebbles in the shells upon the warriors' legs. The snakes themselves, although animated to the utmost with venomous life, neither struck at the men nor rattled their own tails. When once in the course of the dance a rattler sunk his fangs into the cheek of the brave next to the one who held the serpent in his teeth, he was calmly pulled away as if nothing had happened, and the brave who had been bitten continued, with perfect equanimity, his fanatic dance. At the end of some thirty minutes the snakes were thrown in a writhing mass upon the earth and sprinkled with sacred meal. The dancers divided themselves into four squads, and at a given signal each squad rushed upon the mass of serpents, each warrior grasped as many of them as he could in his two hands and bounded away at top speed, one band to the south, one to the north, one to the east, and one to the west, until they had raced a half mile over the prairie. The snakes were then turned loose, and the dancers returned, running their utmost to the butte, and, climbing up its steep sides, disappeared, one after another, in the cavernous depths of the estufa.

CRUMBS FROM THE "AUTOCRAT'S" TABLE.

REV. H. R. HAWES chats very pleasantly in the *Young Man* on his personal acquaintanceship with Dr. Oliver Wendell Holmes. He tells of three-and-a-half hours spent, during his English visit of 1888, in the "Autocrat's" company, along with Bishop Ellicott and Dr. Samuel Smiles:—

The talk wandered freely over all sorts of fields—literary and scientific and social—until it got entangled inevitably in "occultism"—ghosts, double psychic phenomena—on all which questions the Bishop keeps a singularly fair and open mind. Talking of brain-waves, Oliver Wendell Holmes went off in his best style. "I think we are all unconsciously conscious of each other's brain-waves at times; the fact is, words and even signs are a very poor sort of language compared with

calling themselves civilised, that did not know what was meant by a lecture. I have arrived at a schoolroom or hall on the night, and found it empty, and we have had to send out and whip up an audience; and so we went up and down the land, trying to get a hearing for poetry, literature, art, science, tramping on foot too when we could not get a conveyance. Well I remember arriving at a lone, forsaken place after travelling all day, and at last walking across fields in the mud to get there in time, and finding it was the wrong day. Another time the committee waited on me at the close, the attendance having been uncommonly thin, and asked me to lower my fee. Well, those were good days all the same; we were young then; and then, when you did get your fee, the joy and content of sitting in the sanded parlour of the village or town inn with your feet on the mantel-piece, and rattling the dollars in your trouser pockets, so hardly earned!"

EMERSON AT LONGFELLOW'S BIER.

A touching story of Emerson in his latest days was told by Dr. Holmes.

"After Longfellow died, he was laid in the chapel on a bier, his face was exposed, and numbers of his friends went in to take a last look. Emerson was at that time failing—his memory was almost gone—but as he had been so intimate with us for so many years, I thought I would take him into the chapel. As we were both silently contemplating our dead friend, Emerson turned to me and said, 'That is the face of a very amiable gentleman, but I don't know who it is.' This," remarked Holmes, "was very interesting, as well as very touching. It showed that, although his memory was gone, his perceptive and intuitive powers, and a certain instinctive judgment of character, all remained unimpaired to the end."

Walt Whitman, on being told this incident, did not think it sad. He said:—

Emerson's decline always seemed to me quite harmonious. This slowly sinking back into the arms of Mother Nature when one's work is done—and well done—it is like the decay and slow decrease of fruit-bearing capacity of an old apple-tree in a great orchard; at last the old tree crumbles away, and sinks naturally into the soil from whence it sprang.

HOW TO TEACH ETHICS IN SCHOOLS.

THIS very pressing problem, as presented in "high schools," is treated by Mr. John Dewey in the *Educational Review* for November. He strongly protests against the assumption

that if you can only teach a child moral rules and distinctions enough, you have somehow furthered his moral being. . . . The inculcation of moral rules is no more likely to make character than is that of astronomical formulae. . . . Ethics, rightly conceived, is the statement of human relationships in action. In any right study of ethics, then, the pupil is not studying hard and fixed rule for conduct; he is studying the ways in which men are bound together in the complex relations of their interactions.

Of the character and spirit of right ethical teaching he gives an illustration:—

Let the teacher, at the outset, ask the pupils how they would decide, if a case of seeming misery were presented to them, *whether* to relieve it and, if so, *how* to relieve. This should be done without any preliminary dwelling upon the question as a "moral" one; rather, it should be pointed out that the question is simply a practical one, and that ready-made moral considerations are to be put on one side. Above all, however, it should be made clear that the question is not what to do, but *how* to decide *what* to do.

The end of the method, then, is the formation of a *sympathetic imagination for human relations in action*; this is the ideal which is substituted for training in moral rules, or for analysis of one's sentiments and attitude in conduct. . . . Deal . . . so that in and through the special situation chosen the pupil shall have gradually brought home to him some of the *typical features of every human interaction*. These typical features are the content of ethical theory. . . .

DR. OLIVER WENDELL HOLMES.

the direct telegraphy between souls. The mistake we make is to suppose that the soul is circumscribed and imprisoned by the body. Now the truth is, I believe, I extend a good way outside my body; well, I should say at least three or four feet all round, and so do you, and it is our extensions that meet. Before words pass or we shake hands, our souls have exchanged impressions, and they never lie; not but what looks count for something."

PIONEERS OF CULTURE ON THE STUMP.

Hearing Mr. Hawes lecture at Boston, the old man gave a glimpse of the infancy of the American institution of lecturing, which sheds light on his younger days:—

"You star lecturers," he added, "who come over here now and pocket your hundreds and thousands of dollars, little know what we poor fellows, the pioneers of art and letters in America, had to go through. I assure you, when I began, and Emerson and Theodore Parker, there were places in the States

CAN SPIRITS BE PHOTOGRAPHED?

This is the question which Dr. Dean Clarke answers in the *Californian Illustrated* for November with an emphatic affirmative.

In his extensive travels as a lecturer through thirty-two of the United States, the writer has learned of many cases of spirit forms appearing, sporadically as it were, on the negatives or plates of artists who knew nothing of and believed nothing in spirit photography till such forms unaccountably appeared. In two cases of this sort, where these forms persisted in appearing against every effort to prevent, the artists, who were educated in superstitions, abandoned their business, believing that "the devil was in it," as they said.

TAKING "A SPIRIT COUSIN."

He tells how, in 1871, he visited Mr. Mumler, the famous spirit photographer of Boston:—

I requested him to allow an examination of his instruments and to be permitted to see the entire process. He consented. I had him cut a new sheet of glass for the negative, and I watched with eagle eye every motion from beginning to end. Hoping to get a picture of my mother, if any, I fixed my thought upon her as I took my seat. But just as Mumler uncapped his instrument, the name Angeline was as vividly impressed upon my mind, as though spoken audibly, three successive times. I followed Mumler into his closet and saw him develop the negative, and as soon as washed he held it up to the light and I recognised at first sight my cousin Angeline's likeness, as shown in plate.

A SPIRIT-MOTHER AND AN UNEXPECTED SPOOK.

In the following week, Dr. Clarke and a friend called again on Mr. Mumler.

We then had him cut a new sheet of glass for the negatives, and, as I had done before, we both watched critically the entire process. I sat for my picture first, and while the negative was dripping with water Mumler showed it to us, and I was overjoyed to see on it a clear likeness of my mother, who had been in spirit life about nine years.

Another sitting was taken with the hope of a more distinct picture of Dr. Clarke's mother.

When the negative was developed, much to the surprise and chagrin of the artist, but greatly to my surprise and pleasure, a picture of an Indian instead of my mother was found on it. This was as great a test to me as though my mother had appeared again; for more than a score of clairvoyants in various parts of the country had described such a spirit as one of my guardians, and for seventeen years I had felt his healing magnetism, and often had been psychologically controlled by him to speak his language. . . .

We were both familiar with the various methods by which counterfeits are produced, and took special precautions that Mumler should have no opportunity to use them if so disposed; but it is simply justice to him to say he cheerfully gave us every opportunity to detect any attempt at deception we desired.

Dr. Clarke does not merely recount these experiences; he prints along with his story what he declares to be reproductions of those photographs of himself and spirits. White shadowy forms, said to represent "Angeline," his mother, and his Indian familiar, appear in the portraits above his head. There are given in all over a dozen "photographs of ghosts."

"PHOTOGRAPHS CAN LIE."

"Photography as evidence" is, however, subjected to a vigorous and humorous criticism by Mr. E. A. Jelf in the *Idler*. He starts from Mr. Gladstone's allegation in 1890 concerning men being shadowed by the Irish constabulary. "That stands upon evidence, because it has been made the subject of a photograph." Mr. Jelf straightway proceeds to reduce this argument *ad absurdum* by producing photographs showing Mr. Irving and

Miss Lottie Collins joining in dancing to "Ta-ra-ta-boom-de-ay;" and Mr. Gladstone at the door of a Seven Dials public-house. Nay, the same man appears in double, shooting himself, executing himself, chalking on his own back, etc. These are to prove that "photographic evidence is worthless."

At a first exposure, part of the plate may be covered up, at a second only that part exposed, with all manner of absurd combinations as the result. But one picture shows a man seeing a ghost. In this case,

the diaphanous appearance of the ghost is not much harder to explain; the lady who sits for the ghost retires before the exposure is complete, but the rest of the picture is allowed its full time, and thus comes out in a normal way. Hence the contrast between the ghost and the bodily man.

THE MANUFACTURE OF "ANTIQUITIES."

Much curious information is contained in Sir John Evans' article in *Longman's* on the "Forgery of Antiquities." "Both counterfeits and forgeries," he says, "abound in every department of archaeology." "The fabrication of lapidary inscriptions began some four centuries ago." The number and verisimilitude of the forgeries in the first half of this century were so great as to reduce considerably the value of genuine antique gems. "It is probable that more than half of the 'old' Dresden china now exposed for sale is counterfeit." The forgery of ancient carved ivories has developed "two distinct schools"—one in Southern France, the other near Cologne.

TAKING THEM A DRIVE TO IMPROVE THEIR COMPLEXION.

The German Becker seems to have been the modern prince of antique coiners:—

He engraved dies for upwards of 300 types of coins, principally Roman, and as most of these were struck in gold—a metal that does not change in appearance with time—he realised large sums from unwary collectors. . . . How to take off the appearance of novelty from the freshly-struck coins was a question of difficult solution. He solved it thus—he had a small box constructed, which he partly filled with iron filings, and screwed to the springs of his carriage, and in this box he placed his newly-struck coins, and then, as he expressed it, "took his old gentlemen a drive" on the road between Frankfurt and Offenbach. The coins came out of the box, still fresh, but with the too glaring bloom of youth judiciously toned down.

The most frequent coin forgeries are those cast from genuine originals. "Wherever excavations are carried on . . . when coins are inquired for they are sure to be produced."

THE ART OF "PREHISTORIC" PRODUCTION.

Even "prehistoric antiquities" are manufactured. The making of "palæolithic implements" "takes rank as one of the fine arts" in the valley of the Somme and in the neighbourhood of London. So with neolithic implements. "Modern flint axes and arrow-heads are not so easily distinguishable from the ancient." A certain artificer of this craft, nicknamed "Jack Flint," "when from their abundance his forgeries lost their sale," "earned a somewhat honest penny" by publicly exposing his tricks of trade. Objects of the Bronze period are also obligingly prepared.

The writer concludes with the consoling reflection that "great as may be the forger's skill, not one of his frauds in a thousand escape detection," and that the existence of fraud sharpens and tests archaeological discernment.

IN PRAISE OF FOOTBALL.

MR. HELY HUTCHINSON ALMOND, head master of Loretto, writes with much enthusiasm, in the *Nineteenth Century*, on "Football as a Moral Agent." Commenting on the extraordinary popularity of the game, he remarks that, in the course of a single year, more than £1,000,000 is paid in salaries to associate professional players in England, and more than £5,000,000 spent in gate-money by the public. He deprecates the impression that it is a dangerous sport, declaring that it is less dangerous than hunting, and infinitely less dangerous than absence from open air exercise.

Its mere existence and the practical lessons which it teaches, are worth all the books that have been written on youthful purity. I would not care to face the responsibility of conducting a school were there not rooted in it, as, I hope, an imperishable tradition, an enthusiastic love of football.

It also promotes courage, to which the modern spirit is not favourable, and "the duty of keeping oneself in vigorous health."

He admits, however, that the craze for football requires guidance, and advocates putting a stop to the luxurious dinners which follow big matches. He deprecates the fact that most of the leading northern clubs do not rear their players, but buy them. Amateur players are practically excluded; the money element is far too prominent; professionalism is injurious, and that to the professional as well as to the amateur. He also pleads that the grand old Rugby game be preserved from becoming a mere by-word for money-grubbing tricks and sensational displays.

CARDINAL VAUGHAN ON THE SOCIAL PROBLEM.

"A Key to the Social Problem" is offered in the *Humanitarian* by Cardinal Vaughan. He follows his great predecessor in objecting to the term Socialism and Christian Socialism.

In the wide sense (he supposes) the Social Problem means, how to make all classes who compose modern society, happy and content. In the narrow sense it means how to bring contentment and happiness to the working classes—especially to that multitude among them which is badly housed, badly fed, and subjected to trials and privations from which their richer brethren are comparatively exempt.

He deplores the prevalence of what he describes as Socialistic disease, and traces its genesis:—

First, to the bad example and to the false principles which have been deliberately adopted and advocated by many in the responsible classes; and, secondly, to want of thought, want of care, and want of heart for the poor and the wage-earning class; and, lastly, to the inefficiency or neglect of religious teaching among the working classes.

He objects to describe the difficulty as a mere stomachic question. He enumerates the fundamental principles which comprise the legitimate demands of the working classes, and points to the true solution of the problem. (1) The sacramental character of marriage, and the sanctity of home life, including the right and duty of parents to educate their children in their own faith. (2) The two great orders of government, the civil and religious; independent, yet in harmony. (3) The nobility of labour, including the rights and duties of labourer and master. Among the rest, a proper number of feast and rest days; (4) the Christian brotherhood of men, and consequent restraint on unlimited individualism and destructive competition, also harmony between capital and labour; (5) the adoration and imitation of one divine Model, Jesus Christ. The religious key to the problem is, therefore, Love and Truth.

EVOLUTION AND THE CHRISTIAN CREED.

There is something pathetic about the continued effort of the human mind to think its faith in the terms of the latest fashion of speculative thought, an effort not the less remarkable in view of the fact that the faith remains while the fashion disappears. In the *Contemporary Review* another attempt to construe "Man in the Light of Evolution" is made by Madame E. Marie Caillard. She objects to the idea of a two-fold origin, or a special creation of man. It is impossible, she holds, to trace the boundary line between matter and spirit. Matter in all its forms is the expression of spirit—spirit, the informing life of the universe. The soul of man is thus "not an exemplification of a new life, but a different and a higher manifestation of the same life." The spiritual essence of our nature has been developing through our despised animal progenitors; but to man, and man only, is it possible to enter into conscious relations with the Source of his existence.

Madame Caillard explains the Fall as the yielding of the barely evolved and feeble conscious will of man to the stronger and long-settled appetites and animal propensities; but this must have been followed by the complete stoppage of the progress of evolution but for the Redemption. That man might further develop, it was necessary to strengthen the higher faculties, and to procure their co-operation. The goal to his evolution must be revealed to him in the Image of God. Hence these ages of preparation for the manifestation of this perfect Type. It is equally in accord with the principles of evolution that countless ages more should be required for the general realisation of that ideal—the conformation of Christian life to the life of Christ.

The goal of man's evolution, the perfect type of manhood, is Christ. He exists and has always existed potentially in the race and in the individual, equally before as after His visible Incarnation, equally in the millions of those who do not, as in the far fewer millions of those who do, bear His name. In the strictest sense of the words He is the life of man, and that in a far deeper and more intimate sense than He can be said to be the life of the rest of the universe.

How Princess Louise did the Ironing.

In the *Woman at Home* Miss Katharine Lee gives a gossiping sketch of Princess Louise, as daughter and bride, sculptor and painter, as well as Royal personage. She tells an incident of the Princess's sojourn in Canada, for which she is unable to cite the authority, but which she thinks

is worth repeating as an instance of that total absence of "fine ladyism" which is, in its bad sense, so noticeably absent among our Royal ladies. It seems that one day the Princess was walking without any attendants near her, when she came to a cottage. The only person visible was an old woman busily ironing one of her husband's shirts. The Princess was thirsty after her walk, and stopping at the cottage door asked the old woman if she would kindly get her a glass of water. The busy old woman somewhat shortly refused to do so. "The spring was at a little distance," she said, "and she was busy ironing her old man's shirt, for he was going with her to see the Queen's child on the morrow."

The Princess, no doubt with a secret-thrill of amusement said that she would iron the shirt if the old lady would fetch her the water. The compromise was quickly agreed on. The old woman went to the spring and the Princess did the ironing. . . . When the old woman returned, the shirt was handed over to her. Needless to say, it was nicely ironed. . . . exchange for the glass of water the recent laundry woman informed the astonished old woman that she was the "Queen child." The startled old woman took the shirt, declaring that her old man should never wear it, but that she would keep for ever as a memento of the "Queen's child."

THE REVIEWS REVIEWED.

THE NINETEENTH CENTURY.

FIFTEEN articles, for the most part bright, instructive, suggestive, and brief, make the *Nineteenth Century* stand out this month superior to the influences which seem to beset the fag-end of the magazine year. Mr. Michael Davitt leads off by tearing up what he calls "Fabian Fustian." Mr. A. C. Swinburne's "Recollections of Professor Jowett" do not give us the Master again quite as vividly as the work of many a humbler and more Boswellian writer. He describes him on his literary and æsthetic sides. Dr. Jowett was, he tells us, "perhaps the last of the Old Whigs." He greatly admired Dickens, and would have ranked him above Tennyson and Carlyle. Of Carlyle he spoke with distaste and severity, as a preacher of tyranny and apologist of cruelty. Voltaire elicited expressions of dainty distaste. He delighted in Scott. His favourite Shakespearian play was "The Merry Wives of Windsor." He showed his general admiration of Browning's genius along with a comparative depreciation of Browning's works.

The Marchese F. Nobili-Vitelleschi describes the Italian Senate in the first of a series of articles on "Upper Houses in Modern States." In Italy, the appointment of an unlimited number of life-senators is reserved to the king. But the royal prerogative of appointment is limited to twenty-one categories of persons past the age of forty. It is only among these that the king can choose his senators.

The writer suggests that this method of selection from categories should be carried out by electoral colleges in each class.

Dr. H. P. Dunn tells "What London people die of" in an article crammed full of fact and thought. London, he shows, is increasing in healthiness; once, in 1831, its mortality fell below that of England as a whole. The most startling fact he brings out is that the death-rate for diseases of the nervous system in London is almost the lowest among all registration districts. The wear and tear of city life lead one to expect quite the opposite result.

M. Yves Guyot, late French Minister, laments as an Individualist over "Socialism in France," that whereas it was once a movement for liberty, it now might be defined "The intervention of the State in contracts of labour always directed against the employer and to the exclusive profit of the labourer," to result in "the seizure by the State of the whole economic activity of the country and the forcing of every man fit to work into the ranks of State functionaries."

Professor St. George Mivart, who bows to the Papal decree entering in the Index his articles on Hell, explains that he could never think of joining any other communion—certainly not the Anglican; but also points out that works may be put on the Index for any of six specified reasons—which include inopportune or indiscretion—only one being the presence of grave error. Mr. Brett's story of "The Queen and her First Prime Minister" is beautifully told. He feels it difficult to over-estimate the value to the Empire of Lord Melbourne's four years' guidance of the girl-Queen.

Mr. W. B. Steveni recounts the singular diplomatic relations between "Queen Elizabeth and Ivan the Terrible" and their successors. Russia seems to have been specially eager to form an English alliance. The execution of Charles I. so incensed the Tsar that he straightway expelled all English merchants from Russia.

Mr. Theodore Bent traces "the origin of the Mashonaland ruins" to builders well versed in geometry and studiously observant of the heavens, probably of Semitic race and Arabian stock. Rev. Edward Miller, under the ironic heading "Confessions of a Village Tyrant," retails his social service as village parson. Mr. H. D. Traill discusses "the anonymous critic," and decides in favour of keeping him anonymous. Mr. W. Laird Clowes describes the fortifications and accommodation of Toulon and tabulates the strength of the French fleet, to show that in the Mediterranean France is both stronger and readier than we. Mr. W. F. Lord tells the tale of our possession of Tangiers under the title "A Wedding Gift to England in 1662." Head-master Almond glorifies "football as a moral agent," and Rev. J. Diggle replies to Mr. Lyulph Stanley on the policy of the London School Board.

THE FORTNIGHTLY REVIEW.

In common with most of the December magazines the *Fortnightly* falls rather below the average. It contains much interesting matter, but hardly any article of the first rank. Mr. Lilly's curious invective against popular notions of "Self-government," "Nauticus's" instructive essay on "History and Sea Power," Canon Barnett's methods with "the Unemployed," and "X."s satire on "the Rhetoricians" of "the Ireland of to-day," have received notice elsewhere. Mr. A. R. Wallace continues his discussion of the Ice Age and its work, and maintains, against the notion of "earth movements of various kinds," Sir A. Ramsay's theory of the ice-erosion of the valley lakes of highly glaciated regions. A dialogue by the late Francis Adams canvasses the idea of "a hunt for happiness" as the law of life.

LETTERS OF KEATS.

Mr. A. Forbes Sieveking contributes "some unedited letters of Keats," addressed to two sisters named Jeffreys, the son of one of whom made them over to Mr. Robert Archer. Mr. Sieveking thinks that now for the first time the family at Teignmouth, with whom Keats corresponded, and about whose names he was very reticent, can be identified with these Jeffreys. In one letter Keats coins a convenient word, where he says, "Many interesting speeches have been demosthenized." A passage in another letter recalls Browning's "What porridge had John Keats?"

One of the great reasons that the English have produced the finest writers in the world is, that the English world has ill-treated them during their lives and fostered them after their deaths. They have in general been trampled aside into the bye-paths of life and seen the festerings of Society.

MAORI SOCIALISM.

Mr. Fred. J. Moss describes "A South Sea Island and its People":—

In all their islands each Maori has some share in the common possessions, and personal want in the midst of public plenty is unknown. . . . Famine may possibly come, but cannot starve one without starving all. Children bring with them no care, being provided for as soon as born. Work is made a pleasure, and the poorest breathes as pure an air and is nearly as well fed and clothed as the ariki whom he reverently obeys. . . . There is not a lunatic, a gaol, nor a consciously degraded person. The sovereign and the chiefs are in touch with the people, and the people are in touch with one another. The Maori, in short, is a good deal of a Socialist.

Mr. Moss suggests the formation of a Society to inquire into the unseen biological causes of Maori decay.

THE NEW REVIEW.

THE *New Review* contains several timely and attractive articles. Mr. Macdonald's "Problem of the Unemployed" is noticed elsewhere. Lady Knightley, of Fawsley, enumerates, in a most businesslike catalogue, the following "New Employments for Educated Women"—giving lectures and teaching to County Council Classes; carving; as sanitary inspectors—a class which ought to increase and include in their purview workhouses also; horticulture, as learned at Swanley, Kent; as librarians—a calling likely to be overcrowded; as University Extension Lady Lecturers; house decoration; plan tracing; wood engraving; painting on glass; dispensing; as trained nurses in workhouse infirmaries; as lady nurses for children of the upper classes; secretarial work; care of insane patients; and rent collectors or managers under Miss Octavia Hill's scheme. Mr. Frederick Boyle bewails "The Decay of Beauty," and traces it to the artificially secured survival of the unfit, the "swaddling" of almost the entire body in woollens, the disuse of the bath, and other causes. Mdlle. Blaze de Bury gives a most interesting account of Charcot, as physician, professor, in his relations to hypnotism, and as head of the modern neuropathic school. Apparently a sceptic, he believes strongly in the personal faith of the patient in his doctor, adviser, and ultimate cure.

Professor Max Müller contributes a beautifully picturesque sketch of "Constantinople in 1893." He wonders why so many people go to Switzerland and Rome, when a few days more would bring them into an entirely new world, and into a climate in some seasons almost perfect. He has been much impressed with the Turks:—

Whatever may have been said of the "Sick Man," there is many a sign that the Turk has recovered, and that he will prove a tough morsel to whomever wishes to swallow him. The pure Turk is strong and steady, and determined to fight to the bitter end before he surrenders what for over four hundred years he has called his own.

He remarks upon the absence of open vice in the streets.

"The Indictment of Dives" is Mr. W. S. Lilly's epitome of Socialism. Of the thousand volumes written by Socialists—

All bring the same charge, substantially, against Dives—that he is a thief; that is the head and front of his offending; their first count in the indictment against him. "Property is theft." Is this true?

Not of private property in the abstract, he replies "The philosophical justification of private property is that it is necessary for the explication of personality in this work-a-day world." But as to property in the concrete, Mr. Lilly fears the charge is too true.

Mr. Atherley Jones' "Liberalism and Social Reforms: a Warning," puts "this plain, simple question" to the Liberal party, and insists on an answer:

Do they mean to follow in the old lines of *laissez-faire*—*laissez-aller*, or to recognise, and endeavour to carry into effect, that the working classes are henceforth to be the administrators of the wealth they produce?

He finds portentous indications that the Liberal party under its present leaders is not prepared to respond to this half articulate demand of labour. Mr. Arthur Symonds sketches frankly but sympathetically the mixed character of Paul Verlaine. Mr. Marsham Adams, investigating "The Mystery of Ancient Egypt," finds that

The path of illumination which is conveyed by description in the Ritual is described masonically in the Grand Pyramid; and each form illustrates and interpenetrates the other.

THE NATIONAL REVIEW.

THE December number rises distinctly above the general high level of this Review. Lord George Hamilton's admirable article, "Is Our Sea Power to be Maintained?" is noticed elsewhere. Mr. Leslie Stephen's study on Matthew Arnold is a feast of fat things. He attributes to Arnold's poetry "the quality, if not of inevitableness, of adhesiveness." The "Scholar Gipsy" is selected as his masterpiece.

The function which he took for himself was to be a thorn in the side of the Philistine: to pierce the animal's thick hide with taunts, delicate but barbed; to invent nicknames which might reveal to the creature his own absurdity: to fasten upon expressions characteristic of the blatant arrogance and complacent ineffable self-conceit of the vulgar John Bull, and repeat them till even Bull might be induced to blush.

Mr. Alfred Austin takes us once more into the "Garden that I Love," and ushers us thence with a poetic farewell.

The O'Connor Don reminds his Unionist readers of "The Unsolved Irish Problem." The Home Rule Bill, whatever may have been its shortcomings, has been read a third time. It has been passed by the Democratic branch of the Legislature of the United Kingdom. It is idle even for the most extreme Unionist to shut his eyes to these facts. The step taken can scarcely be retraced, and some form of what is called self-government for Ireland will haunt whatever Ministry may be in power.

What, then, must be done? Independence is out of the question; Federation must certainly not begin with Ireland. The thing to do is to hold the Imperial Parliament every three years in Dublin, in Edinburgh, and in London. Let there be also a royal residence in Ireland. This rotation of location would meet the needs of the case. Mr. Moreton Frewen treats of "Silver in the 53rd Congress" in an article which deserves fuller notice than can be given to it here. Mr. R. S. Gundry tells the story of "The Lady of Pootoo"—the goddess Kwon-yin—the singular Chinese counterpart to the Holy Virgin.

Rev. Dr. Story approaches the subject of "The Kirk and Presbyterian Union" from the standpoint of one who loves the auld kirk very much, but whose zeal for Union is rather tepid. "In order to unite with the Established Church the Dissenters would have to surrender nothing. The U. P.'s would still retain, in unimpaired vitality, both the theory and the practice of Voluntaryism." The Free Church would simply revert to her vaunted "disruption principles," which include Establishment. The Church, on the other hand, in accepting Disestablishment would make an enormous surrender.

Even were the sentiment of Union predominantly strong in the Established Church, we could hardly expect it to gratify itself at such a sacrifice. But, in point of fact, that sentiment is one which evokes little enthusiasm among Churchmen.

Rev. Canon Hayman, D.D., discusses "The Voluntary Schools Crisis" in language more vigorous than convincing. He begins by describing Mr. Acland as the "modern successor" of Julian the Apostate, "the demagogue-tyrant of a department, [who] is profiting by the august precedent, and destroying religion by destroying religious schools. That universal Board Schools mean the extinction of vital religion from education is as certain as symptoms of tendency can make any statement concerning human society.

He is deeply moved by the "official silence" of Anglican dignitaries at this crisis, and concludes by asking, "Will not the verdict of posterity be that the English Church in the crisis of her destiny counted many excellent bishops, but lacked an episcopate?"

THE CONTEMPORARY REVIEW.

THE December number contains many solid articles, but none perhaps of the most striking kind. "The Government and Labour" by Mr. H. W. Massingham, "The Economy of High Wages" by Mr. J. A. Hobson, the "Strasburg Commemoration," "Man in the Light of Evolution" by Emma Marie Caillard, Mr. Andrew Lang's discrimination between "Superstition and Fact," and Mr. Herbert Spencer's rejoinder to Professor Weismann have been noticed elsewhere. Mrs. Crawford gives an interesting sketch of "MacMahon and his Forbearers." Professor Max Müller has been aroused by "a most alarming bomb shell" thrown by Mr. James Darmesteter, who assigns the Gathas, the oldest portion of the "Zend-Avesta" to the first century A.D., whereas the generally adopted date is from 2000 to 1500 B.C. He admits that from a strictly historical point of view it would be difficult to resist Mr. Darmesteter's criticism, but he brings forward strong philological arguments in support of the traditional date. Mr. Rendel Harris takes occasion from the recently discovered Diatessaron of Tatian to show that Bishop Lightfoot, whose defence of the Johannine authorship created a general revolution of opinion in its favour, has understated, rather than over-stated, his case.

Dr. Anthony Traill treats of the compulsory purchase of land in Ireland. He complains of the way in which the seller is now harassed by costs of proofs of title. He urges more freedom in the creation of perpetuities by the fining down of rents.

LORD COLERIDGE AND THE POET BROWNING.

Lord Coleridge discusses the time-honoured distinction between education and instruction, describing education as the drawing out of the powers of the mind. He urges that technical instruction, however valuable, requires, in order to heighten its value, more general culture. The authors which he would recommend for special study stand in this order—Shakespeare, Milton, Wordsworth, Gray, and Wolfe. He omits Tennyson; Browning he also omits, because, though admiring him, he has not always understood him. He tells how the poet used to send his volumes.

Soon after one had thus been given me, he asked me how I liked it. I replied that what I could understand I heartily admired, and that parts of it, I thought, ought to be immortal; but that as to much of it I really could not tell whether I admired it or no, as I could not understand it. "Ah, well," he said, "if a reader of *your* calibre understands ten per cent. of what I write I think *he* ought to be content."

THE DEGRADATION OF THE LITTLE TOE.

The controversy which has been proceeding in the *Contemporary* as to the possibility of the transmission of acquired character, in which Mr. Herbert Spencer has taken the affirmative, and Professor Weismann the negative side, is continued this month in "a rejoinder" by the synthetic philosopher. Much of the article is fully intelligible only to biologists, but it opens with a reference to the curious and much debated degradation of the human little toe. It was in the first instance supposed that the progressive disappearance of this digit was due to the inherited and accumulated effects of boot-pressure. Professor Weismann had pointed out that the same fusion of the phalanges was found among people who go bare-foot, and in Egyptian mummies. Mr. Spencer rejoins by carrying the explanation further back. He points out how the change from arboreal habits to terrestrial habits, have led to the development of the great toe as being nearer the line of direction. The

inner digits have increased by use, while the outer digits have decreased by disuse.

BLACK-COATS ON THE WARPETH.

Mr. John Darfield does not understand why so much noise has been made about the parish charities which are claimed for the disposal of the new parish councils. He shows that "in the country at large £400,000 a year spread over fifty-two counties is all that is touchable by the Bill." "This gives an average of about £77,000 per county." He laments—

the waste of energy that has taken place in the whole army of black-coats going on the warpath for such a twopenny-halfpenny matter as this clause turns out to be. It is the more striking, because, while the 13th clause gave to the Parish Council so very little, the definition of ecclesiastical charity stamped as Church property what had never been the Church's before.

A SCANDINAVIAN REVIEW OF REVIEWS.

Kringsjaa is a little Norwegian illustrated fortnightly of some pretensions, published at Christiania by Messrs. Huseby and Company, and edited by Herr H. Tambs Lyche. It contains translations of the most notable articles in the English and Continental magazines, and is therefore bound to be of great interest, while its original contributions and its editorials are themselves bright and keen. The illustrations, however, can hardly be said to improve the magazine. A note on the back of the wrapper draws the reader's attention to the fact that *Kringsjaa* was already in possession of such and such articles before the REVIEW OF REVIEWS had managed to "scrape the same together" and appear before its Scandinavian subscribers. As *Kringsjaa* is a fortnightly and has the advantage of us by two weeks, this little note—unless indeed it be a defence against an anticipated accusation of plagiarism—is a trifle unjust.

No. 4 (15) has a well-written, somewhat pessimistic little article entitled "Men," from which we learn that in Europe the reins of political government are in the hands of merely *commonplace men*, Gladstone excepted; and, in the whole history of the world, a nobler figure than the man now striving to repair his mistakes of the past and do Ireland justice has seldom been seen. *Commonplace men* are of no use to the State in times like these; therefore France is in a chaos and its politics are dissolved in personalities. Germany has pensioned off its one great statesman—the only one fit to be the ruler of a great empire through the quicksands of the times—and now it is being governed—"no, it is not being governed at all; it is simply *drifting*." The same chaos is in Italy. In Spain, indeed, the Premier might do good work, but he is not allowed to have his way. And so it is in England alone, says *Kringsjaa*, that we see a statesman daring enough to grapple with one of the questions that have absorbed his country's strength and hindered its development, and resolute in his endeavour to solve the problem and make room for other things. The gist of this article on "Men" is, in fact, simply that, in the whole field of politics, there is only one man, in the highest sense of the word, and that is Gladstone, who would be conspicuous as a man and a leader in any case. And—"Gladstone is *growing*." (C)

Poet Lore.

Poet Lore and *Shakespeareana* are the only magazines devoted to pure literature, but while the latter is devoted to Shakespeare-worship entirely, *Poet Lore* promotes the study of Browning and Shakespeare in particular, and comparative literature and criticism in general.

THE REVUE DES DEUX MONDES.

THE *Revue des Deux Mondes* for the month of November opens with an historic article from an historic pen: a chapter of the history of the Princes de Condé, by Henri d'Orleans, Duc d'Aumale, their successor at Chantilly. This palace, almost totally destroyed at the Revolution, has been rebuilt in all its splendour, enriched with priceless memorials of the history of the Condés of France, and will fall into the possession of the French Academy on the death of its aged possessor, by virtue of his irrevocable deed of gift. The chapter printed in the *Revue* refers to intricate negotiations between Mazarin, Minister of the young King, Louis XIV., and the Crown of Spain, with which Condé (M. le Prince), cousin and rival of Louis, was involved. The quarrel is matter of common history; not so the intention of King Louis to get hold of Chantilly by confiscation. He went there, found himself *fort bien*—"extremely comfortable"—and said to his courtiers that he should include the palace in the treaty. The Duchess de Châtillon writes to Condé that she "hopes not to lose him as a neighbour." M. le Prince replies angrily that he should take the confiscation as an "awful affront." "It is quite false," says he, "that the King ever had a passion for the place. His Majesty never would halt there to see *him*, and if they made Louis go there it was purposely done to vex him,—Condé." "It is the only spot where I can go while I am out of court favour, and as I see no early chance of being restored to that, the least I can claim is a pleasant place in which to pass the time of waiting." Fortunately Chantilly escaped confiscation; the young King contented himself with St. Germain and Versailles, then a hunting-box of Francis I. How Louis made it into the great palace he who runs can read; but the Sun King and his descendants have vanished, while the Duc d'Aumale still is at Chantilly writing the history of his race and on the best of terms with the French Republic.

Spelling Reform by M. Michel Breat, also of the Institute, touches on a very pretty quarrel in the French press, wherein the arguments *pro* and *con* seem to have been tossed about like shuttlecocks. Neither foreign students of French, brought up upon the older literature, nor the natives of conquered Tonquin, can be appealed to in favour of phonetic spelling. The cultivated student buys and treasures up old editions of the French classics, and enjoys the antique appearance of *roy* and *foy*. "What venerable editions do we not see cherished across our frontiers," remarks M. Michel Breat; and the aged Latin language survives in churches and universities and courts of law, beside her own modern daughters. He opines that, if France wrote phonetically, and with any great modifications of the old spelling, her enemies would take it as a proof that she was crumbling to pieces. The complicated English language, which in orthography is, scientifically speaking, the worst of sinners, has been practically taught on all points of the globe to two hundred millions of men.

The last edition of the dictionary of the French Academy was revised in 1835, since when, "if we consider all the tributary themes which poetry, the drama, politics, science and popular slang have brought into the French language in sixty years, it is obvious that something more than a re-edited reprint is required."

Language is a puny creature; it can hardly be lopped of its natural developments to more advantage than a biped or a quadruped could be lopped of its limbs because they are not perfectly straight.

The account of the maritime laboratories in Italy and France is full of interest. The great building in Naples was erected through the indefatigable efforts of a young German Doctor, Herr Anton Dohon, who twenty-five years ago wrung a reluctant permission from the Italian authorities. France has similar establishments at Roscoff and Banyule-sur-Mer.

Monsieur Beaulieu prefixes to his very serious article on "Co-operators" the title of several works in French and English, placing at the head of his list "Three Phases of Co-operation in the West," by the American writer, Amos G. Warner. Here and there we pick out a fact in the long and rather long-winded pages. For instance, *à propos* of Parisian commerce, intending visitors to the gay city should note that public opinion greatly exaggerates the difference between wholesale and retail prices in wine and sugar, but that in medical drugs and butchers' meat the difference is "colossal." Again, in Belgium the Socialists and the Catholics have each started co-operative movements, while in America, Mr. Warner only finds himself able to cite as really successful those founded by the Mormons, which partake of a religious character. From that to the Army and Navy Stores the way is long. But M. Charles Dide discusses our co-operative stores and also the Rochdale Mills, with knowledge. The more profound co-operative ideas seem to demand for their realisation that touch of religious enthusiasm which cannot be summoned up at will in the service of economic science.

The second number of the *Revue des Deux Mondes* boasts of no special feature. M. Schure, under the title of "Eastern Sanctuaries," begins what promises to be a light and amusing account of a Frenchman's travels in the East. Cairo, her bazaars and mosques are well described; as is also his experience in what may be styled a dancing hell, to which he was taken by an aged Rabbi.

M. Edmond Planchet's paper, "On the Shores of the Mekong," is a vigorous pleading for the Colonial Empire of France. It goes without saying that he begins with reprobating the English outcry against the French proceeding in Siam, but the pith of the article is summed up in the last half page. The Mekong is one of six great rivers which pouring down from the spurs of the Himalayas traverse China, Tonkin, Laos, and Burmah. The Mekong is more than 3,000 miles in length, and comes through Cochinchina, and the French occupation of Siam has brought them nearer to the English, who wish to utilise the great stream after it has passed out of China proper. So, at least, declares M. Planchet. He thus concludes a paper of much interest:—"So far as we are concerned, if for the last twenty years there has existed emulation between the French and the English in finding the best road into China by the Western Frontier, we must nevertheless leave off struggling if our capitalists will not help our Government to reconstruct the colonial empire imagined by Duplex in the last century. Perhaps the terrible disaster of the Panama Canal will render it difficult to get much help. Our actual situation in Indian China is however excellent, and we must keep it uninjured until the time comes when our moneyed men shall have forgotten this fear of foreign enterprise, and seek higher interest for their savings than that of the French funds, which no longer meets the increasing expenses of life in France." This seems to open a dangerous vista of Eastern speculations to the thrifty, prudent French peasant, on whose patient earnings the savings of the moneyed men must ultimately depend.

THE REVUE DES REVUES.

How well THE REVIEW OF REVIEWS idea has "caught on" is evidenced by the success of the *Revue des Revues*, which was founded in April, 1890, by Mr. Ernest W. Smith, with a view to doing for the French what its English prototype does for the English-speaking world. In 1891, Mr. Smith was succeeded by M. Jean Finot, and under his able editorship the *Revue* has steadily improved. Several new features have been introduced, noteworthy being a selection of the caricatures of the month and

M. JEAN FINOT.

original articles on a variety of topics. Of the latter the best have been the series in the present year on the Literary Movement in Europe, in which each country has been dealt with by a native writer. Among its contributors the *Revue* thus numbers George Barlow, Herbert Spencer, Björnsterne Björnson, Emilio Castelar, Count Tols'oy, Professor Ferrero, Professor Lombroso, and many other eminent men of letters of different nationalities.

With the New Year the *Revue des Revues* will be doubled in size, that is to say, it will appear twice a month, while the price will be as before. As its sub-title, the *Revue* will have *Revue de l'Europe et d'Amérique* to indicate its extended scope; the old features will be retained; more original articles will be given, and notices of new novels, etc., will be introduced.

THE NOUVELLE REVUE.

In addition to M. Engerand's interesting account of mediæval watering-places, noticed elsewhere, the first number of the *Nouvelle Revue* makes a feature of old-world men and places. M. Perrens, of the French Institute, describes eloquently the life of a sixteenth century apostle of tolerance. The man thus styled was none other than Sebastian Castellion, the author of the celebrated dialogues which, published in 1542, became one of the literary successes of the century. Castellion, a Swiss by nationality, has been styled by one of his critics "the Protestant Fénelon." When the black death burst out in Geneva, he remained in the town, although the pastors fled from the hospitals, and did his best to help the people. But notwithstanding the many proofs of moral and physical bravery which he gave to both his friends and enemies, M. Perrens' hero was publicly condemned by Calvin. With him it seems he only differed on two trifling points, of which the most important was as to what had been the precise spirit in which Solomon had written the Canticle of Canticles. Renan once declared that Castellion was the first to recognise the true character of these writings. Be that as it may, his quarrel with Calvin practically exiled him from Geneva, and he lived a quiet, retired life at Bâle with his wife and family, translating the Bible into Latin and French, and writing constantly in favour of tolerance and universal charity. But Calvin still continued to actively persecute "that infamous pest," "that dog." At last, worn out by

the incessant struggle, Castellion was just preparing to go to take refuge in Poland when death surprised him on the 29th September, 1563, when he was only forty-eight years of age. Although none of his followers at Bâle had dared to defend him during his lifetime for fear of irritating Calvin, his death put the whole town, and especially the University, into mourning.

In the same number M. de Lassus begins what promises to be a remarkable addition to the social history of France, namely a series of articles on the famous Hôtel de Bourgogne, and the origin of the Comédie Française. The Hôtel de Bourgogne, we are told, went through some curious phases, having been built in the reign of St. Louis by the King's brother, the Comte d'Artois, and some centuries passed before the Hôtel de Bourgogne became in any way associated with the theatre. The first plays acted there were Passion plays, which were acted for the benefit of a troupe who styled themselves Brothers of the Passion; but they soon had to make place for King Louis XIII.'s comedians, and it was there that ultimately the famous Italian company really taught the dramatic art to their French *confrères*.

M. G. W. discusses exhaustively the new military law, voted on the 15th of last July by the Reichstag, and attempts to prove that France should follow closely her traditional enemy in military improvement.

M. Diamanti gives a delightful picture of Russian Turkestan and the Trans-Carpathian Railway, or rather that extension of it which penetrates into Turkestan. This Russian possession, by its geographical position, touches on China, Bokhara, and the north of Afghanistan, and is in itself a land where will soon be established coal, tin, copper, gold, silver and lead mines, and should form an unexpected and much-needed addition to the wealth of Russia as a nation. If all that M. Diamanti says is true, Turkestan should form a valuable outlet for the Russian emigrant, for the land, he declares, could easily be made marvellously fertile by means of a system of canalisation, and even now the cotton-growers of Turkestan are amassing year by year enormous wealth.

The second number of the *Nouvelle Revue* contains an interesting article on Princess Anne, the wife of Henry I. and third daughter of Iaroslav, the mediæval Tzar, who has been styled the Russian Charlemagne. To this lady fell the distinction of being the first and last Russian Queen of France; the marriage is said to have taken place some time between the years 1045 and 1051. No portrait exists of this gentle "Roynne Anne," but it is recorded that when the bride made her entry into Paris, she wore the then national Russian costume, a red cloth gown, with a coat to match, with cloth of gold sleeves, red morocco boots, and a cap of blue fox fur, whilst round her neck was a splendid pearl necklace.

M. Delacroix continues his curious series of articles on "The Witchcraft Trials of the Seventeenth Century," and here deals with love-philtres and potions, among other curious facts recalling that Madame de Montespan constantly received the aid of witches in keeping Louis XIV.'s love; on one occasion she gave a sorcerer fifty louis for a love potion. The most efficacious love powders, we are told, were composed of the ashes of a toad, those gathered at the cremation of a child, added to small pieces of a consecrated host. A certain Chamberlain, a Breton, drove quite a trade in wax figures of Love or Death. M. Delacroix declares that hundreds of children were sacrificed in unholy rites at various times, and that as late as the beginning of the eighteenth century.

THE NORTH AMERICAN REVIEW.

VARIETY, rather than eminence of interest, marks the November number of this review. The amount of matter possessing a chiefly Transatlantic value is a little greater than usual. Two Senators discourse of "the struggle in the Senate." Governor Flower, of New York State, asking "How to Improve our Roads," argues against "national roads," "State roads," "town roads," and pronounces in favour of "county roads," laid out at county expense. Mr. Erastus Wiman pleads for the free admission of "eggs, as representing all other articles of food," from Canada into the United States. Mr. Lyman's "Ten Years of Civil Service Reform," Mr. Pinkerton's "Highwaymen of the Railroad," Professor H. Kellar's "Magic Among the Red Men," M. de Ghait's "Revision of the Belgian Constitution," and the Marquise de San Carlos' "Parisienne," are noticed elsewhere.

THE SPANISH WOMAN.

Miss Eva Canel describes the lot of "the Spanish Woman" somewhat optimistically. She recalls that some nobles still place before their titles, when signing their names, the initial letter of their wife's name, and exclaims: "Could higher consideration or greater chivalry be asked?"

In Spain there are banking houses that do business under the name of a woman, as there are women doctors serving in the hospitals of the State, and women writers and women journalists, and women doctors in the sciences, and women bachelors in arts, in philosophy, and in letters; and, above all, we have notable women pedagogues, who have raised very high the standard of instruction in Spanish schools. . . . If this be not sufficient, there are the women composers of music, the women painters, and the women sculptors of Spain—a brilliant constellation. . . . And be it remembered that woman in our country has the liberty to choose a husband and to marry the man whom her heart has chosen even without her parents' consent—to such an extent do the Spanish laws favour women.

HOW TO TRY CRIMINAL LUNATICS.

Treating of the "Social relations of the Insane," Dr. H. S. Williams presses for "a slight modification" in the trial of prisoners for whom the plea of insanity is advanced. The courts, he thinks, err "on the side of undue harshness towards the congenital criminal and the inebriate," and his proposal is one that has cogency on this side of the Atlantic also:—

Nothing more is necessary than to waive the question of the defendant's mental condition during the trial by jury, admitting only evidence as to guilt or innocence of the alleged crime as in ordinary trials. If on this evidence the man is convicted, let the court then appoint a commission to inquire into his sanity. Such a commission, acting with due deliberation after the heat of legal controversy has no further sway, would surely stand a far better chance of deciding justly whether the offender were insane or not than could be done in the mystifying legal atmosphere of the ordinary court room. According to the decision of this commission, the criminal would be sent to the ordinary prison or to the asylum for criminals.

THE WELSH VOTE IN THE UNITED STATES.

Mr. John E. Owens discusses the, to him, surprising fact that the Welsh population of the United States, numbering one and a quarter million, have hitherto voted almost solidly Republican. He attributes this fact to the mistaken idea that the British Liberal party, which advocates Home Rule and low tariff duties, is represented by the American Republican, and not the Democratic party, in spite of the historic devotion of the latter to local autonomy and tariff reform. The last Presidential campaign, however, saw many Welshmen

casting Democratic votes; and since the transfer of the Welsh vote would secure the States of Pennsylvania, Ohio, Wisconsin, and New York for the Democrats, Mr. Owens begs party managers to dissipate the ignorance of Welsh electors.

OTHER ARTICLES.

Mr. W. H. Mallock reiterates and reinforces the argument that the manager or inventor is the producer of the additional wealth which his management or invention enables a given number of labourers to turn out, over and above the quantity which the same number would have produced without his aid. Miss Bessie B. Croffut describes under the title of "A Tempting Theory in Practice," the state of the Five Civilised Nations in Indian Territory. She finds a refutation of Mr. Henry George's theory in the fact that "although every adult man is the possessor of from 500 to 1,000 acres of arable land wherever he may choose to select it, yet four out of five of these same men prefer to work by the month for little more than their board and clothes." Mr. John Raymond announces "the Decline of Ecclesiasticism," and remarks, as "one of the most striking and significant signs of the age," "the spectacle of an unbelieving world teaching a believing Church the true principles of her religion." For everywhere reformers of every school are crying out, "Preach the Sermon on the Mount and exemplify it." The Church has gone wrong by preaching to an age of action, only the lessons of hope and patience learned in the ages when she suffered persecution. Mr. Raymond predicts a world-wide revival of religion—"of faith in God and love for man, when the brightest dreams of universal brotherhood shall be realised," but expects it to come "in spite of, rather than through the Church."

THE ARENA.

AFTER having dipped for a few months below the average, the *Arena* for November rises above it. Characteristically more "viewy" than factful, the number contains much that is stimulating and entertaining. Rabbi Schindler's "Thoughts in an Orphan Asylum," Mrs. Scammon's "Knowledge the Preserver of Purity," Mr. Powell's "Study of Thomas Paine," Henry Wood's "Medical Slavery through Legislation," and the articles on "The Bacon-Shakespeare Case," are noticed elsewhere. Dr. Cram insists that the "money power" or capitalistic monopoly should be excluded, as the "slave power," which is but one branch of it, was excluded, by amendment of the Constitution of the United States. A very attractive programme for 1894 is announced.

GERALD MASSEY AS POET AND BORDERLANDER.

The editor, Mr. B. O. Flower, writes with great enthusiasm of Gerald Massey, whom he thus appraises:—

He is one of the most graceful and charming lyric poets England has given the world. He is also a seer and philosopher, a mystic and scientific student, a prophet and reformer, while all his work reflects simplicity and purity of life inspired by his high ethical code and lofty faith. For years he has experienced remarkable psychic phenomena within his own home circle. To him have been given tests and evidences which have convinced him beyond all peradventure of doubt that his loved ones who have passed from view are neither in the ground nor in some far-off Heavenly City of the Christian, nor yet in the state of Devachan of the Buddhist, but are around about him in his daily life. He has had proof palpable and of such a reason-compelling character as to leave no doubt in his mind that his dear ones live, love, and move onward. . . . There is little doubt but that Gerald Massey would have become one of England's most famous lyric poets, had he chosen to confine his gifts to subjects pleasing to wealth and conventionalism.

THE FORUM.

THE November number is an exceptionally rich lode. It is stored with treasures of fact and of the thought that shapes the facts of the future. It deepens the impression that in the *Forum* we have one of the very foremost and most valuable periodicals in the world. The most important articles are specially noticed elsewhere. The discussion on "Southern Sentiment and Mob-Law" is continued by the Hon. L. E. Bleckley, Chief Justice of Georgia, who declares "Negro Outrage no Excuse for Lynching," and by Mr. Walter H. Page, who sees in these lynchings "the last hold of the Southern bully." Mr. Page testifies that chastity among the negroes, almost unknown in the time of slavery, has shown as rapid an improvement since emancipation as any wise moralist could expect. He urges upon leading citizens, newspaper editors, churches and caucuses in the South to build up local sentiment and to brand lynching with public horror. General Adam Badeau contributes an interesting sketch of "Hamilton Fish: the Old School and the New." He insists that the Geneva Arbitration was the work of Secretary Fish more than of any other. He gives a very taking account of the stately aristocratic manners of Mr. and Mrs. Fish, of Mrs. Fish's "never allowing a visit to go unreturned, although she received thousands, and once got out of her carriage to find her democratic caller at the wash-tub," and of her persuading her husband against his will into accepting the Secretaryship.

THE AMERICAN SENATE.

"The Decline of the Senate" is discussed in two articles—one, somewhat belated, by Professor von Holst, thundering for a campaign of public meetings to compel the Senate to act on the Silver Question; the other, less impassioned but more weighty, by a writer unnamed, on "The Senate in the Light of History," which concludes that—

The truth of the matter is that at every period in our history we have had the kind of Senate that we deserved to have. When politics was a more dignified profession, we had the best men in the nation in the Senate. When it was pugnacious, we had great fighters in the Senate. Now that it has become in many parts of the Union an ignoble profession, we have a larger proportion of commonplace men and an element of positively ignoble men—men whom it is a shame to honour. It were idle to blame Senators themselves for the change, since it is the people that are to blame.

We put politics on a lower level than our fathers put it. With them it was easily the noblest of the professions. Now it is neglected. . . . We regard politics as a kind of service that we employ men to do who have an aptitude for inducing us to employ them, or men of another class who can afford to live on small salaries.

THE *Ludgate Mont* for some months now has been giving an excellent series of articles on Boys' Schools, Volunteer Corps, Famous Regiments, etc. For those who want very light literature, the *Butterfly* and the *Bohemian* may be recommended.

Sylvia's Journal, which has been quite transformed under Mrs. Graham R. Tomson's editorship, began a new volume in November. The December part forms a special Christmas number, but it is a mistake to page it separately, so that it cannot take its proper place in the volume, when it has to do duty for the December part. It contains an interesting article on Christmas Carols by Mrs. Conyns Carr, suggestions for Church Decorations, a sketch of Mr. F. H. Cowen, besides stories, etc., the whole number being well got up and excellently illustrated.

SOME ILLUSTRATED MAGAZINES.

Harper's.

STORIES of all sorts and sizes form the bulk of "Harper's Christmas Number." Mr. T. P. O'Connor's account of the House of Commons is noticed elsewhere. Howard Pyle, under the title of "A Soldier of Fortune," tells again the story of the notorious Colonel Blood, whose deeds seem more befitting the pages of a sensational romance than sober history—a peaceful country apothecary by day, a fierce and turbulent Fifth Monarchy man by night; at one time kidnapping the Duke of Ormonde, at another unsuccessfully attempting to steal the Crown Jewels; then King's favourite to the dissolute Charles, speedily followed by loss of Court favour, financial ruin, and a friendless death. This month's fiction is peculiarly American, but all good. "How Love Came" is a sacred poem of considerable merit by Alice Sewell, in style like the older carols:—

The night was darker than ever before
(So dark is sin),
When the Great Love came to the stable door
And entered in,
And laid Himself in the breath of kine
And the warmth of hay,
And whispered to the Star to shine,
And to break, the Day.

The Century.

THE *Century* has a group of finely discriminating articles by a trio of writers on Rembrandt and Jan Steen, illustrated by well-chosen engravings of Rembrandt's paintings, and by Steen's "Eve of St. Nicholas." Wallace Wood links together studies by Gérôme Laurens, Puvion de Chavannes, Leighton, and others. The Memoirs and Letters of Edwin Booth are concluded. A brief biography of Berlioz epitomises the tragedy of the musician's life—the tardy recognition of his divine gift. The late Phillips Brooks' Christmas sermon is full of the large charity of a Christly soul. Another brief posthumous paper is by Russell Lowell, on "The Five Indispensable Authors"—Homer, Dante, Cervantes, Goethe, Shakespeare.

McClure's Magazine.

THE November number opens with a portrait of Mr. Frank R. Stockton, and Miss Thomas, the poetess, "dialogue" with him is very daintily decorated with drawings of his house by Mr. H. L. Brown. The "human documents" for the month are portraits of A. Conan Doyle, R. E. Peary, the Arctic explorer, Camille Flammarion, and F. Hopkinson Smith, engineer, artist, and writer. A good portrait of President Cleveland sets off Mr. E. Jay Edwards' investigation in the President's "personal force," which he finds to consist in "character" whose essence is "the courage of truth." Dr. Wm. Wright tells the story, as he had it at first hand, of what his tutor, Rev. W. McAllister, had seen and gleaned of the Brontës in North Ireland—the strange uncles and aunts of the famous writers. The hypnotic experiments of Dr. Luys and their marvellous results are described by Mr. R. H. Sherard, and illustrated by photographs more realistic than pleasing. "Patti at Craig-y-Nos" and "Four Hundred Degrees below Zero"—an interview with Professor Dewar on liquefied oxygen—both profusely illustrated, are noticed elsewhere, and go to make up a very attractive number.

The Pall Mall Magazine.

THE Christmas number of the *Pall Mall Magazine* is a generous shillingsworth. Bret Harte tells a ghost story of California, and Mr. Astor succeeds in making a very realistic ghost story on the basis of Thiers' "History of Napoleon's Campaigns." The hero is carried in dreams to the snow-fields of Austerlitz and goes through the famous fight by the side of the Czar, is shot by Cossacks and awakes—to die of aneurism, the doctors say; of Russian bullets, he says. Two coloured pictures are beautifully produced. Rudyard Kipling sings of "Bobs." Would the compliment to Lord Roberts be any the less if the language were not quite so redolent of the Old Kent Road? Here is one verse:—

What 'e does not know o' war,
Gen'ral Bobs,
You can ast the shop next door—
Can't they, Bobs?
Oh, 'e's little, but he's wise;
'E's a terror for 'is size,
An'—'e—does—not—advertise—
Do yer, Bobs?

The English Illustrated.

MR. H. W. MASSINGHAM contributes a peculiarly fresh and delightful "Impression of Venice." The illustrations of the article are very pleasing, but the alternation of sepia and blue in the tinting of most of the pictures in the number is trying to the eyes. Mr. Robert Bair propounds in story form this gruesome query—If a husband is mortally wounded and lies helpless, stricken for death, but yet likely to linger till the time-limit for murder trial in America expires, and if his wife, to ensure the hanging of his assailant, smothers the spark of life against her own bosom,—who then is the murderer? There are some dainty illustrations of Herrick's love-songs, and a liberal supply of good fiction by Barry Pain, Max Pemberton, John Strange Winter, and others.

The Strand.

THE *Strand* is chiefly noticeable this month for the description of the Royal Marriage from an Oriental point of view. The writer is the Moulvie Rafiuddin Ahmad, who, as the Queen's Hindustani teacher, has had special opportunities for observation and comment. He has been permitted to reproduce in facsimile the Queen's letter to the nation after the wedding. The article which is profusely illustrated compares our English Royal Marriage ceremonies with those of Eastern potentates. The chapter on "Ears" is concluded, with again a remarkably eclectic selection of illustrations. The Princess of Wales, Ellen Terry, Antoinette Sterling, Sir Frederick Leighton, Lord Randolph Churchill, Mr. Spurgeon, and several novelists lend their ears to the subject. The interview with Sir Henry Halford is elsewhere noticed.

The Idler.

MR. JEROME K. JEROME will stir the sympathies of most authors and would-be authors with his story of "My First Book." Who that writes does not know too keenly the wide disparity between the creation in his brain and that which sees the light on paper? and few are the writers who have not gone through more or less of the weary hunt for a publisher, with its inevitable disappointment and heart-sickening delays. Pity 'tis that while the disappointment and trial come to the many, to the very few comes such success as Mr. Jerome has attained. A capital sketch of the author and editor

forms the frontispiece. The sketch of Mr. Frank Lockwood, Q.C., and the article on "Photography as Evidence," are elsewhere noted.

The Californian.

PERHAPS the most generally interesting article in a specially good number is that upon the cliff-dwellers of America. Last year a scientific expedition was sent out from New York to survey the district where the States of Arizona, Colorado and Utah, and New Mexico join. The party made many important discoveries, and brought back a large store of "finds" in the shape of pottery, weapons, matting, food, and skeletons. Here and there picture-writings and signs on the rockface were found in great plenty:—

The occurrence of the Swastika cross, however, was regarded as the most important discovery made in that group of pictographs. This cross is a Mexican and Central American symbol, and its presence at this distant point would seem to indicate that the inhabitants of the cliffs were conversant to some extent with the religious rites of the nations in the south.

Father Junipero Serra is the subject of a reverently admiring article. "More than any one else of the eighteenth century, he stamped his impress upon the record of Californian history, and fully deserves an honourable place among the illustrious names of the makers of America." Through toil and dangers innumerable, in spite of mortal sickness and disappointments, his missionary zeal spurred him on to a wonderful career among the Mexicans. Irrigation in California bids fair, according to Mr. William Lawson, to solve the problems of agriculture and fruit-culture in that district. "Spirit Photography" is elsewhere noticed, as also "Football in the West."

The Review of the Churches.

THE robust conception of Reunion which the *Review* maintains leads it to introduce topics of difference between the Churches of a kind so "burning" as quite to startle old-fashioned ideas. The two subjects which promoters of good feeling between Anglican and Nonconformist have generally considered "taboo" are Disestablishment and the "religious difficulty" in educational politics. But Dr. Lunn has had the Disestablishment controversy ventilated in his pages long ago; and this month he boldly opens a Round Table Conference on Religious Teaching in Board Schools, with Mr. Athelstan Riley as first contributor! Mr. Riley makes a singularly strong appeal to non-Unitarian Nonconformists to support him in his contention that the Incarnation is not a "sectarian" doctrine. "Logically," he supposes, "undenominationalism may be defined as the residuum of the Christian religion when everything that anybody can possibly object to has been taken out of it"! Archdeacon Farrar contributes a prose-elegy on the late Master of Balliol, which sums up in somewhat vague generalities Dr. Jowett's theological position. Dr. Lunn introduces this month a new feature in a series of sketches of "Philanthropists at Work." The first three groups selected are those connected with Toynbee Hall, the Society for the Assistance of Ladies in Reduced Circumstances, and the Liberator Relief Fund. Mr. Carlik sketch of Mr. Tom Mann's religious history is noticed elsewhere.

THE *Young Gentlewoman* begins a second volume in December, with some new features and general improvements.

THE WASTED WEALTH OF KING DEMOS.

THE NORTHAMPTON "GOOD SAMARITAN SOCIETY."

THE movement for utilising the police and for securing their co-operation with other philanthropic bodies is steadily making headway. It has now reached Northampton.

On Tuesday evening, Sept. 19th, a meeting was held in the Old Council Chamber of that town, in response to an invitation issued by the Mayor, Mr. Henry Martin, suggesting the desirability of establishing in Northampton "a society similar to that which is doing such excellent work in the city of Edinburgh, for helping the suffering and neglected children of our streets, and cognate objects." The Mayor, who presided, read a letter from Mr. M. P. Manfield, M.P., warmly approving the objects of the meeting. He thought such a society as was proposed would be a great good; and if the police could be looked upon as the children's friends, as they really were, a very great deal of good could be done. There were cases where parents could not clothe their children; the society was intended to help them, give them the power to clothe them, and then, if they failed in their duty as parents, to bring them before the magistrates.

Mr. F. G. Adnitt explained the objects of the proposed society. He had had this kind of work on his mind, he said, for some years; but it was not until quite recently—after reading "The Wasted Wealth of King Demos," in *THE REVIEW OF REVIEWS*—that he could see his way to forming a committee to carry out what evidently was needed. He communicated with the able and capable Chief Constable of Northampton, who at once sympathised with the object, and agreed that a society might be started on similar lines in Northampton. They did not intend in any way to pauperise the people; they intended to appeal for left-off clothing, and lend out garments. The clothing would still remain the property of the society; every article would be marked, so that it could not be either sold or pawned. They proposed to work through the police force, and to lend clothing in those cases certified by the police as being necessitous. In every large town there was a stratum of society entirely untouched by either church or chapel, Salvation Army, or School Board. The children could not be sent to the schools, and it was most desirable that they should be saved from being criminals. That was the object of the proposed society, which would work in harmony with the local Society for the Prevention of Cruelty to Children. Other branches of useful work would, he thought, grow out of it, such as a truants' school, or soup kitchen in the winter. Four or five interested in the movement met last week and prepared a draft scheme.

OBJECTS AND METHODS.

They proposed to call the society "The Northampton Good Samaritan Society."

Its objects were:—(1) To assist in relieving the wants of the suffering children of our poorer classes; (2) To collect and arrange for the distribution of cast-off clothing for poor children and impoverished adults, in genuinely necessitous cases; (3) To co-operate with the police in the carrying out of the provisions of the Protection and Prevention of Cruelty to Children Act.

Its methods were:—(1) By securing the co-operation of the Borough police, who will be asked to assist the Society by (a) Inquiries as to necessitous cases; (b) Arranging for the assistance of pawnbrokers and second-hand clothes dealers to prevent the improper disposal of the clothing and otherwise; (c) Maintaining continuous observation so as to ensure that the children for whom clothing is supplied really have the benefit of it; (2) By loaning, instead of giving, the clothing provided, and then only in cases certified by the police, to the necessitous. Each article loaned to be impressed with the stamp of the society; this, with other precautions, acting as a fairly effectual check to the improper disposal of the clothing.

It was proposed to appoint at that meeting a deputation to wait upon the Watch Committee to obtain their sanction and support.

In the course of the discussion Father Stanley said he sympathised most cordially. He was very pleased to see that they were going to work on amicable lines, and religious questions were to be left out so that all could work unanimously with the one idea of helping those who needed helping.—The Chief Constable, Mr. Mardlin, said that he was thoroughly convinced that such an association would very materially strengthen the hands of the police. It was not intended that the police should be relieving officers, but that every inquiry should be made and every care taken before anything was done in the way of relief. He produced a photograph of five children in a house in Northampton with absolutely no furniture; poor miserable beings who would be useful members of society if properly looked after.—Mr. Adnitt said it was proposed to have officers who should have absolute discretionary power in regard to the loan of furniture and the gift of food. Of the society which was created by a unanimous vote, the following officers were appointed:—President, the Mayor of the Borough for the time being; treasurer, Mr. F. G. Adnitt; secretary, the Chief Constable.—Mr. Mardlin said if he had the consent of the Watch Committee he should be glad to do what he could, at any rate for the start.

TESTIMONY OF THE CHIEF CONSTABLE.

The Chief Constable writes to me:—"There is every reason to believe that I shall command the unanimous and hearty co-operation of every member of the force in carrying out this work, which I have undertaken to direct and supervise for twelve months. I have reason to believe from the experience already gained that if such a system were universally adopted juvenile crime and depravity would be reduced to a minimum in all large towns. I consider this the most feasible method to adopt to prevent crime, which is one of the first duties inculcated upon the mind of every member as he joins the service."

LATER DEVELOPMENTS.

On November 27th a meeting was held under the presidency of the Mayor and including representatives of most of the leading religious and public bodies, when progress was reported.

The co-operation of the Police had been approved by the Watch Committee, a storehouse had been secured beside the Police Station, and already the work of the Society was begun.

REPORTS FROM HELPERS.

MANCHESTER.

THE Manchester Social Questions Union sends in a report of their General Purposes Committee. It has considered a draft memorial, proposed by the Conditions of the Home Life Committee to the Parks Committee of the Manchester and Salford Corporation, in reference to the adornment of public places and thoroughfares with shrubs. The encouragement of home gardening was considered, as were also the recommendations of the Ladies' Health Society. Petitions were adopted from the Temperance Committee to the House of Commons in support of the Bill of the hon. member for Leeds, to prohibit the sale of intoxicants by licensed victuallers to habitual drunkards, and praying for the insertion in the next Licensing Bill of a clause providing for the appointment of inspectors solely responsible to the Imperial Government. Local business was also attended to, and resolutions passed of importance to the cause of temperance. The hon. secretaries were instructed to arrange with the Lord Bishop of Manchester, President of the Union, for the holding of the first annual meeting about the middle of November. A resolution also was carried that an important sub-committee be appointed to act in prospect of municipal elections, so as to secure the election of such candidates as would be most likely to support the objects of the Social Questions Union.

RADCLIFF AND DISTRICT.

One of the hon. secretaries of the Social Questions Union (who is also one of my Helpers) reports that they have got most of the leading religious and social workers in the town on one or more of their committees. These are six in number, and deal with Temperance, Gambling, Social Purity, Education and Recreation, Labour, and Conditions of Home Life.

BRADFORD.

A Social Reform Union has recently been formed in Bradford. One of its committees are very wisely going specially to study the question of the employment of children in factories as half-timers, with the view of forming a healthier public opinion on the subject.

SHEFFIELD.

Sheffield has just formed a Social Questions League, the objects of which are to promote temperance, social morality, and other practical work for the general well-being of the people. They have set out a goodly list of temperance and social work with which to start.

ROCHDALE.

The first annual report of the Rochdale Social Questions Union registers much good work done and much more contemplated. The Housing of the Poor Committee have carried out the house-to-house visitation of a section of the town, and called the attention of the municipal authorities to the insanitary and other objectionable conditions in which many poor families lived. "As a result an official inspection has been made of the neighbourhoods indicated; most of the cellar dwellings have been ordered to be closed; and all the Lodging-houses have been more or less renovated and cleaned through. A decided change for the better has taken place in some dwellings." If the Town Council cannot be induced to take action forthwith to erect a Model Lodging-house, the Union declares itself bound to devise some other means to meet the need. The Police Court Mission has been taken over by the Union and made the care of a special committee. About one-

third of the persons brought before the magistrates for drunkenness have been induced to sign the pledge. The Temperance and Recreation Committees combined to form a Temporary Labour Bureau and Meeting Room for the unemployed last winter. The Smoke Nuisance Committee have collected information as to its abatement in other towns, and engaged an expert to take observations of mill chimneys in Rochdale. These observations were published, laid before the municipal authorities, challenged, tested, and confirmed. Observations have now been taken every week for the past month and have been published. They show that a great improvement has taken place. The membership has numbered 109; the subscriptions amount to £40.

How to Punish the Drunkard.

A THOROUGHGOING defence of the moderate use of alcohol, which he extols as a food, is contributed to the *Humanitarian* by Sir Dyce Duckworth, M.D. He urges that little be taken; that it be good of its kind, and that it be taken at meals. To prevent misuse, he would penalise the supply of alcohol to any non-adult, and he urges that drunkenness should be punished by some legally enforced personal stigma; by the infliction of corporal punishment, and by disfranchisement on the second conviction.

What Becomes of Old Governesses?

A FRIEND of mine at Cambridge writes to me to suggest that any of our helpers, or any philanthropic lady or gentleman or members of Boards of Guardians, who are disposed to throw a little light upon one of the most obscure phases of English social life, would be doing good service if they were to undertake a careful inquiry in the workhouse or union, as to how many of the inmates have been engaged, in their earlier days in teaching other people's children, or in doing work more or less connected with teaching. "Heaven only knows," she writes, "what becomes of poor governesses when they reach middle life! If they are not in the workhouses, where are they? Workhouse masters, matrons, or clerks to Boards of Guardians might, without much difficulty, draw up a very valuable return as to the percentage of women in workhouses over fifty years of age who have not only themselves been educated, but have been engaged in educating others." My own impression is that this solution of the mystery will not stand the test of examination. So far as my experience goes—which I admit is not very extensive—the number of old governesses in workhouses is very small. Still, as our correspondent presses the point, I shall be very glad of more definite information on the subject.

MR. EDWARD FLOWER, Secretary of the Recreative Evening School Association, sends his latest pamphlet, "The New Code, and How to Use It"—a perfect *multum in parvo* on the subject.

Atalanta for December appears as a double number. Mr. Edwin Oliver has an article on "Haddon Hall"; Mr. Benjamin Taylor contributes another on rings, under the title of "The Golden Circle"; and Mr. R. Farquharson Sharp continues his short sketches of Wagner's "Der Ring des Nibelungen." Last month he wrote about "Das Rheingold;" this time he has "Die Walküre" for his subject. The articles are all well illustrated.

POETRY IN THE PERIODICALS.

THE death of Mrs. Frances Wynne, according to the pathetic narrative of her sister poetess, Mrs. Hinkson (Katharine Tynan), in *Longman's* for November, took place on August 9, "the night that London was visited by the great thunder-torm," just six days after the birth of her boy. "When her child was born, and she heard it was a son, her cup of happiness was full, for she had desired a boy; she passed away in the full light of that new-found joy, sinking peacefully in an exhaustion that had no pain." Mr. Andrew Lang writes in the same magazine of "the charm of Mrs. Wynne's natural happy melodies, flowing like a well beside the waste," and these verses of hers, which he now publishes, beautifully illustrate his criticism:—

RAIN MAGIC.

Is this the selfsame town that we wakened to this morning,
Where the heavy fog hung low and the lamps burned vague and red;
Or has it vanished quite, and, without a word of warning,
Has some city of our dreams risen silently instead?
For every dingy street is a fair and gleaming river,
And every narrow court is a shining waterway;
And rippled shafts of light glisten everywhere a-quiver,
Here a splash of ruddy gold, there a sudden silver ray.
There are burnished golden bars where were lengths of rusty railing;
There are serried silver slopes where the roofs rose gaunt and high;
And a red and purple cloud down the windy west is sailing,
And a brave moon struggles pale up a wind-swept space of sky.

THE November *Century* publishes a poem of eighty lines, which Emerson wrote—

"TO LOWELL ON HIS FORTIETH BIRTHDAY."

"Strength for the hour," was the fortune the muse

"sung for him." The "man of marrow, man of mark," was—

Too well gifted to have found
Yet his opulence's bound;
Most at home in mounting fun,
Broadest joke, and luckiest pun;
Masking in the mantling tones

Of his rich, laughing voice,
In speeding troops of social joys,
And in volleys of well-nirth,—

but should there come days of stress and sorrow, "a time and tide too exigent, when the old mounds are torn and rent"—

Then the pleasant band will know
To put this frolic mask behind him,
Like an old summer cloak,

And in sky-born mail to bind him,
And single-handed cope with Time,
And parry and deal the thunder-stroke.

Emerson here showed himself veritably a fore-seer.

A TENNYSON BUST FOR POETS' CORNER.

THE photographic reproduction of a bust of the late Lord Tennyson as he was in 1857, which we give here, is from a piece of work executed by Mr. Thomas Woolner, R.A., for Mr. Charles Jenner, of Edinburgh. Mr. Jenner, whose name was and is almost a household word in Edinburgh, was a very great admirer of the Laureate, whose intimate friendship he possessed for many years.

As a proof of his enthusiastic admiration, he commissioned Mr. Woolner to execute this bust, which just before his death a short while ago he presented to Lady Tennyson, in order that it might be placed by the poet's grave in Westminster Abbey. The bust is now being exhibited at the Edinburgh Industrial Museum, but it will very shortly be removed to London.

THERE is nothing of extraordinary interest in the *Magazine of Art* or the *Art Journal*. In both the illustrations greatly enhance the interest of the letterpress.

BUST OF LORD TENNYSON, BY THOMAS WOOLNER, R.A.

THE BATTERSEA POLYTECHNIC INSTITUTE.

A PEOPLE'S UNIVERSITY FOR SOUTH-WEST LONDON.

MAKE a map of London—one that shows the principal streets and chief railway lines—and look at the area which lies south of the river. The “silver streaming Thames” runs as softly to-day as it did when Spenser wrote his “Prothalamion”; but how different are its banks to what they were in the “spacious times of great Elizabeth.” Then they were

“... painted all with variable flowers,
And all the meads adorn'd with dainty gems
Fit to deck maidens' bowers,
And crown their paramours.”

In the present year of grace they are marked by wharves, docks, piers, landing-stages, warehouses, railway stations, and all else that is essential to the commerce of the greatest city of the greatest Empire in the world. This is as true of the south bank of the river at, or in the neighbourhood of, Battersea, as of the better known portions near London Bridge, Wapping, Rotherhithe, Ratcliff or Shadwell. And the land lying south of the river at Battersea—how changed the picture which it presents upon the map to-day from that which one may see in (say) Rocque's map of London, published in 1745! In place of the half dozen or more of heaths and commons which then existed, and of fields innumerable, we discern a labyrinthine network of streets, together with railway and tramway systems as perplexing as may be found anywhere upon the habitable globe. For South-west London, as it is called, has almost as crowded a

population as that of the East-end. And this population, it may be observed, is for the most part exclusively English.

It has, we believe, been estimated that the three parishes of Battersea, Clapham, and Wandsworth contain considerably more than a hundred and fifty thousand people within their borders. The heads of families in these parishes are mainly skilled artizans, clerks, or labourers. They constitute, beyond all question, a very important community—one whose powers for good and for evil in this vast metropolis are very considerable. What has been done to educate them? What measures have been taken to train them to use worthily the powers which they possess? What steps have been taken to make them better workmen, worthier citizens, happier men? Practically, no steps have been taken: in truth, nothing has so far been done.

Very different has been the fortune of the East-end of London. Enthusiastic young graduates have from time to time gone thither to lecture to the people concerning Greek tragedy, the philosophy of Plato, the painters of the Renaissance, or the poetry of Dante: a popular novelist has discovered that Whitechapel, Bow, and Stepney have the most romantic associations, and has made their people live for us by the never-failing magic of his sympathetic pen. To that novelist is due an institution which, whatever its success may have been or may be, was boldly conceived, and (at the beginning) rich in promise

BATTERSEA POLYTECHNIC.

for the future. The East-end possesses a People's Palace; but south of the river, in the thickly-populated districts of Battersea, Clapham, and Wandsworth, where there live folks as deserving as any that are to be found east of Aldgate, there is not—or, rather, there has not been up to the present—any institution of the kind in existence.

They are now about to change all that. There was formed some time ago a body termed the South London Polytechnics Committee, which body, under the presidency of Mr. Evan Spicer, set to work to do for South London what Mr. Walter Besant and certain charitable corporations had done for the East-end. Two years ago or more that Committee dissolved, leaving its work to be continued by the governing body of the Battersea Poly-

technic Institute. Similarly, the governing body of the Battersea Polytechnic made up their minds to provide workshops for various trades, as well as physical and chemical laboratories, photographic-rooms, art-rooms, music-rooms, and numerous class-rooms and lecture halls, and to arrange for instruction in Technology (including art applicable to plumbing, carpentry, bricklaying, pattern-making, mechanical and electrical engineering, and chemical trades); in science generally, according to the regulations of the Science and Art Department; in art (including wood-carving and metal chasing); in music, in commercial subjects, and in subjects specially interesting to women. The governing body determined, moreover, to give accommodation for social work, for clubs and

MR. EDWIN TATE.

ALDERMAN EVAN SPICER.

technic Institute, which included in its membership several well-known gentlemen nominated by the Committee of the South London Polytechnic Institutes, by the governing body of the City Parochial Charities Trust, by the London County Council, by the London School Board, and by "co-optation." This governing body at once began to form an Institute which should provide technical and scientific education "with reference to the requirements of the district." Mr. Walter Besant's "school" in the original Palace of Delight, it may be remembered, "consisted of a great number of quite small rooms, fitted with desks, tables, and whatever else might be necessary. Some of these rooms were called music-rooms, and were intended for instruction and practice on different instruments. Others were for painting, drawing, sculpture, modelling, wood-carving, leather-work, brass-work, embroidery, lace-work, and all manner of

social rooms, to provide two gymnasia, refreshment and reading rooms, and to build a swimming bath and a great hall.

This was a large order—one which obviously necessitated a very respectable credit-balance at the Institute's bankers. Vain would have been the untutored eloquence and the far-reaching influence of a John Burns, vain also the wide experience of a Mr. Henry Cunynghame, without money enough to build and support the Institute that had been planned. An appeal to the public for £60,000 had accordingly to be made; and in response to that appeal more than £50,000 had been obtained before the close of the autumn of 1891. At present some £3000 are required to complete the scheme, and to secure the handsome endowment of £2500 a year which the Charity Commissioners have promised towards the permanent support of the Institute. If that sum of £3000 be not

forthcoming, the annual subsidy from the Commissioners will only amount to £1500. For this reason the governing body earnestly appeal to those who are interested in the social and educational welfare of the people to assist them in carrying out to its "fullest extent" the Scheme which was prepared with so much care, and in erecting an Institute which in its design and construction shall make complete provision for the social and educational wants of the vast population of South and South-west London.

With a view to making this same "complete provision for the social and educational wants," etc., the governing body, some two or three years ago, acquired from Mr. Plunket, then Her Majesty's Commissioner of Works, as a site for the Institute, a piece of land of about two and a quarter acres in extent, formerly the property of the Albert Palace Association, whose luckless and deserted structure stands hard by the new building. Having thus got a site, as well as a cool fifty thousand, the committee looked around for an architect and builder who should between them construct the lordly edifice which they desired to put up. The architect whom they selected was Mr. E. W. Mountford, a Fellow of the Royal Institute of British Architects; while the builders whose tender turned out to be the lowest were Messrs. Holloway Brothers, a local firm held in high repute in Battersea and in the neighbourhood. As the money in hand was not sufficient to carry out in its entirety the scheme proposed by Mr. Mountford, it was decided by the governing body to defer the erection of certain portions of the building, and thus bring the scheme within the means available. The raising of the Great Hall, and of sundry other structures, was therefore postponed for the time being. The Institute itself was, however, immediately begun, and is to-day on the way of being an accomplished fact.

Those who have had occasion to ride along the Battersea Park Road in a tram-car—cabs are few and far between in that vicinity—cannot fail to have noticed the imposing structure in brick and freestone that has gradually grown up near the Albert Palace. It consists, as far as the ground-floor is concerned, of two blocks of buildings placed parallel to the Battersea Park Road, the front block occupying the whole southern side, and the back the whole of the northern side of the site. Shorter blocks at right angles to these form connecting links with each

THE ENTRANCE HALL

extremity and in the centre, by which connections two spacious quadrangles are formed. Three large corridors suffice for the whole of the ground-floor: the south, which is ten feet wide, runs the whole length (some 300 feet) of the front block; the north does the same for the rear block, while another corridor running north and south connects the two centrally.

Let us suppose for a moment that we are coming into the Institute by way of the chief entrance facing the Battersea Park Road. A spacious hall rising through two floors first attracts attention. The south corridor crosses at the back of this hall, and is here joined by the central staircase rising from the point of junction. To the right of the entrance is to be found the administrative department—the secretary's office, the clerk's office, and the room set apart for the principal. At the left are numerous social rooms—a reading-room, and a common-room in which men who are members will be permitted to play draughts, bagatelle, etc., as well as to continue other pursuits of an equally harmless and edifying character. On this same floor are also gymnasias for both men and women, refreshment-rooms, and lavatories. A swimming bath will be constructed here in due course, and a large hall for meetings, concerts, and the like ere long be built. At the back of the edifice and on the ground floor are the boiler-room, the engine and dynamo room, and the engineers' workshop. For, be it noted, the Battersea

THE GREAT HALL.

Polytechnic intends above all things to consider the claims of those who are desirous of becoming engineers, especially electrical engineers. The authorities, therefore, deemed it advisable that the Institute should be lighted by electricity, and acting upon the suggestion of Professor Garnett, of the Durham College of Science, fitted up compound engines capable of giving 100 h.p., the exhaust steam of which will be utilised for heating the building. The engine-room will moreover be fitted with a smaller engine, and with two dynamos and accumulators capable of supplying current enough to run 700 lights.

The whole of the first floor of the front block will be occupied by class-rooms. Here things many and marvellous will be taught by day and in the evening; here sweet music will from time to time be discoursed (in rooms with double doors and with walls of extra thickness and special impenetrability to sound); here women students and members will have their class, club, and reading-rooms; here also will be drawing and electrical schools. On the second floor will be found a dozen or more of rooms for the use of those who are studying art and the science of chemistry. Laboratories and lecture theatres, studios (lighted from the north) and rooms for modelling, metal-chasing, wood-carving, and photography, occupy for the most part the available space at the top of the building.

With regard to the outside of the edifice, one may without any appreciable shock to one's artistic instincts admit that the architect has striven, not unsuccessfully, to bring some beauty of form and of colour under the daily observation of the persons who from time to time use or pass by it. The style of the building is modern—"nineteenth-century renaissance" Mr. Mountford calls it. The walls are built of red Suffolk brick and Bath stone, while the roofs are covered with red Broseley tiles. The chief ornamental features are ten statues representing Architecture, Sculpture, Painting, and Engraving, (these four are in the west gable); Poetry and Music (these fill the two central gables); and Chemistry, Electricity, Mathematics, and Engineering (these adorn the east gable). The central hall is the only ornamented part of the interior of the building. This has an enriched plaster ceiling and a glass mosaic floor made in Battersea.

Such, briefly described, is the structure which the Prince of Wales is to declare open before the beginning of the coming year. What do the quarter of a million of inhabitants who, we are assured, swarm in South-west London propose to do with it? "The experience of

existing institutes shows clearly"—we are quoting from the official report for 1892—"that the people will eagerly avail themselves of the benefits afforded by these Polytechnics." We trust that they may do so in Battersea and the surrounding district. Judged from the point of view of Applied Science and of Technology, the arrangements that are being made leave little to be desired. There will be a Day School, which will be opened on the 8th of next month, at which a boy will have an opportunity of acquiring a thoroughly sound and useful knowledge of applied science, while his general education will not be neglected. He will, for example, be trained in mathematics, and he will be taught French, English,

and drawing. The complete school course for day pupils will extend over the period of three years. The evening classes are intended, of course, to cover a considerably wider range of subjects, and are bound to be popular in a district which contains so many large firms of engineers, founders, chemists, candle and match manufacturers, and builders. There are, moreover, to be special Saturday classes for teachers (men and women), each of which will be devoted to a lecture and to practical work in the laboratories, workrooms, and workshops.

The teaching staff which has been engaged would seem to be a very adequate one. The principal of the Institute (who, by the way, is alone responsible to the Governing Body) is Mr. Sidney H. Wells, a Whitworth Scholar, who was trained at Maudslay's, and who subsequently taught Engineering at Dulwich College and at the Yorkshire College, Leeds. Mr. Wells's assistants are Dr. Sumner, Mr. S. H. Davies, B.Sc., and Mr. W. E. Walker. Mr. W. G. Thomas, formerly Head Master of the St. Thomas Charterhouse School of Art, will be in charge of the Art Department, and Dr. Ralph

MR. SIDNEY H. WELLS (PRINCIPAL).

Dunstan in charge of that devoted to Music.

But what of the Sunday? Is this huge pile of buildings to remain absolutely unutilised for purposes of social enlightenment and edification on the one day in the week when people are freest to profit by them? Possibly the Governors may have plans to prevent such a waste of the wealth of King Demos. A decision out of regard to denominational susceptibilities to make no use of the class-rooms on Sunday would be a poor compliment to religion. There can surely be no objection, on ground of "the religious difficulty," to employing some, at least, of the rooms for educational as distinguished from proselytising work on a Sunday. It is agreed on all hands that one great want of the times is ethical teaching. Working men especially are eager to learn the

ethical obligations belonging to their industrial, civic, and political life. Is there any better day than Sunday for instruction in morals? or is there any reason why Battersea Polytechnic should not aim at becoming for one day in the week, at least, a people's Ethical University? In place of the neutral exclusive policy which sectarian jealousies have enforced in the past, a policy inclusive of the chief types of moral education might be tried with no little hope of success. There is room enough in that magnificent suite of class-rooms for every variety of ethical teaching which has any serious claim to be heard.

There ought certainly to be little difficulty in arranging, by way of tentative commencement, for courses of Sunday afternoon lectures on Christian Sociology, or the Christian laws of social life, dealing in succession with the home, the civic, the national, and the international state, the spheres of industry and exchange, the pursuits of science and of art. Some Anglican body, such as the Christian Social Union, might, perhaps, arrange one such course. Some body occupying an analogous position among Nonconformist churches might give a second, if indeed Nonconformist and Anglican might not co-operate in the comparatively neutral realm of Christian ethics. Subsequent courses might be given by Comtist, Spencerian, and other teachers. Precautions against frivolous or immoral, or obtrusively polemical teaching could easily be taken by the Governors. Lecturers could readily be given to understand that exposition, not controversy, was required, but otherwise they must be left perfectly free. And there can be little doubt that even the least Church-minded among our artisans would be glad to know from competent teachers how social relationships and responsibilities are interpreted by Christian ethics. The cost of the proposed series of lectures need not be great. If the funds at the disposal of the Governors do not yet admit of the outlay, the Christian and other ethical societies referred to might find means to carry out the idea. Were it once successfully realised in Battersea, said to be the largest institution of the kind in London, the Governors would soon have the pleasure of seeing their precedent of a People's Ethical University widely followed.

Is Race-prejudice a Protestant Instinct?

In an earnest exhortation to the readers of the *Catholic World* for November, to ameliorate "The Negro Race: their Condition Present and Future," the Very Rev. J. R. Slattery states that "Protestantism may in part be held responsible for the irreligion and immorality of the negro." He argues that:—

The widely-spread race prejudice, as powerful in the North as in the South, though shared by Catholics as well as by others, is truly a Protestant instinct. . . . From the baptism of Clovis, when the haughty Gaul despised the Goth fully as much as ever our Southern whites despised the blacks, to the crowning of Charlemagne as the common head of an undivided people, only the same period of time elapsed as that between the introduction of slavery into our territory and the present day. Yet it was long enough for the Catholic Church to blend the master and slave into one, and to make the new race the custodian of the ancient and the beginner of modern civilisation. Nor was it different with Goths and Romans in Italy, with Normans and Saxons in Great Britain. Even in our day and in our own hemisphere, whatever misery afflicts Spanish America, the Catholic instinct of human equality has delivered it from race antagonisms. There is no negro problem in Catholic South America.

Reunion Canvass in St. Louis.

DR. MONRO GIBSON, in the sketch of "The World's Sunday-School Convention in St. Louis," which he contributes to the *Sunday at Home*, recounts how one of the speakers told

of the way in which the Sunday-school superintendents and teachers of St. Louis, organised into an Evangelical Christian Union, have planned and executed a canvass of the city, the object of which is to reach every family, and, as far as possible, every individual, for the purpose especially of inviting to some convenient church and Sunday-school all who have drifted away from, or have never enjoyed, Christian fellowship and instruction. The whole city had been moved by it, and the thoroughness with which the work is done may be inferred from the fact that in the second year of the canvass they were able to report the visiting at their homes of as many as three hundred thousand people, and the gathering in of many wanderers to the different churches.

"The only parallel," remarks Dr. Gibson, "I know to this,"

is the house-to-house visitation of the town of Bradford (on the initiation, however, not of the Sunday-school teachers, but of the Nonconformist ministers), which, strange to say, was commenced at the very same time quite independently, as if the Spirit were moving hearts in the east and in the west with the same impulse, and leading them to the same results. I found the St. Louis people quite in ignorance of the work at Bradford, and it is probable that the Bradford workers have known as little of the St. Louis enterprise . . .

The movement in both places is exceedingly hopeful, especially as showing the possibility of Christian union, not only on neutral lines, but in the direct and specific work of the Church.

A Civic Centre in the Far West.

THE *Century* describes what it calls "an interesting experiment in municipal reform," which was carried out a year or more ago in a Western city of about 7000 inhabitants:—

There was a feeling among many of its citizens that the interests of the city would be promoted, and the public welfare enhanced, if the community as a whole could be brought to take a lively interest in the conduct of its affairs. In others words, they set themselves about the task of fostering public spirit and local pride. For this purpose they formed an association consisting of the ministers of such churches as could be induced to join the movement, and a certain number of prominent citizens representing all religious and political creeds. This association adopted as its constitution the following brief declaration of purposes:—

"The object of this association shall be the promotion of municipal affairs in this city. It shall foster and encourage a good moral tone, uphold correct business principles, promote hygiene, and also interest itself in proper methods of education. It shall encourage the execution of the laws, uphold the officials in the performance of their duties, and recommend and urge the passage of such other ordinances, rules, and regulations as may be of public benefit."

Committees were appointed on several branches of municipal administration, with directions to collect and collate accurate information pertaining to the different departments, and to report to the association with such recommendations as they saw fit; all such reports and recommendations to be laid before public meetings, which were to be called from time to time for their consideration. The newspapers of all parties have sustained the movement from the outset, and its career promised to be one of great usefulness.

GIFT LITERATURE.

A GUIDE TO THE CHRISTMAS BOOKS OF 1893.

WHAT shall we give our children, our brothers, our sisters, our friends? Every year this question recurs, and every year if only one is lucky enough to know one's way about the bookshops, the question becomes easier to answer. But then few people are lucky enough or wise enough to have this knowledge, and there is no confusion greater than that to be found in a bookseller's shop a week or so before Christmas. Every one is turning over the same batch of books, and with the babel of tongues and the variety of wares the unhappy purchaser is rent almost asunder. It is then with the intention of assisting as far as possible our readers to make their choice out of the new books of the season that we this year, as in preceding years, give a brief survey of what is best in the gift literature of the moment. There are many, of course, who—and perhaps very wisely—ignore the new books, and simply fall back on the old ones for presents: to such we would suggest that this is pre-eminently an age of new editions, and that the last two or three years have seen the publication of re-issues of the old writers in forms that would make the hands of the old book-lovers itch with envy. There is, for instance, that very sumptuous edition of Sir Walter Scott that Mr. J. C. Nimmo is producing under the editorship of Mr. Andrew Lang. The romances, with one or two exceptions, cover two volumes, the price for the two being but twelve shillings net. Then, for those who do not care for Sir Walter's "Big Bow-Wow strain" there is Messrs. J. M. Dent and Co.'s charming little edition of Miss Austen—at half-a-crown a volume—or the similar editions of the Brontës, Miss Edgeworth, Love Peacock, and Miss Burney. Here is a choice for the lovers of what is old! Or, if it is for boys you want a book of the past, you can start them on Alexandre Dumas with "The Three Musketeers" in that new edition which for the first time has made the master of Athos, Porthos, Aramis, and D'Artagnan outwardly attractive to English readers. Here again the publishers are Messrs. J. M. Dent and Co., the price for the two volumes being seven shillings.

But, after all, it is children that have our first thought: for there is an embarrassment of riches. Mr. Jacobs' "More English Fairy Tales" we noticed last month, but there still remains a big pile of absolutely important additions to nursery literature—to say nothing of heaps upon heaps of toy-books.

RIVAL HANS ANDERSENS.

Last month we said, incidentally, that if any nursery writer showed signs of being elbowed out by modern competitors it was Hans Andersen. And before our words had appeared we received two new editions, each so charming that the only difficulty is to praise one without appearing to cast a slight upon the other. Luckily the volumes make their appeal to children of somewhat different ages. There is no girl, or boy either for the matter of that, of twelve and over who will not welcome with delight the edition which has been newly translated by Dr. Oskar Sommer.* It is in two volumes, which are sold separately; and each volume contains a plenitude of pictures by a new illustrator, Mr. Arthur J. Gaskin, who is very successful in a somewhat mannered. One of the smallest we reproduce here. Technically, both outwardly and inwardly the books are a delight: excellent rough paper, good clear print, and a cover attractive, sober, and serviceable make these volumes the books of the season for those nurseries which have not already a trustworthy Hans Andersen. Fancy, eight hundred pages of as good fairy tales as were ever written—"Little Claus and Big Claus," "The Snow Queen," "The Ice Maiden," "The Tinder Box," "The Goloshes of Fortune," "The Steadfast Tin Soldier"—why, one reads them all again with a lump (of delight) in one's throat! The other edition† is suitable for children of less years. The translation—a new one, too, by Mr. R. Nisbet Bain, who also contributes a short introduction—is quite as excellent, and the type is larger, while the sixty-five illustrations, by Mr. J. R. Weguelin, are perfectly charming: we are only

debarred from reproducing one or two by their size. The cover of the edition is a thing of joy; indeed, the book is a sumptuous one altogether, and the little children who get it will be happy for weeks. Andersen has never before been adequately translated, and now we have two editions admirable in every way.

FROM "THE ARABIAN NIGHTS."

This book is designed *virginibus puerisque*, says Miss Dixon of her excellent collection of "Fairy Tales from

"I SHALL RIDE FORTH INTO THE WORLD," SAID THE ELDEST BROTHER.

(From "Stories and Fairy Tales.")

* "Stories and Fairy Tales." By Hans Christian Andersen. George Allen and Unwin, 6s. each.

† "The Little Mermaid and other Stories." By Hans Christian Andersen. Lawrence and Bullen. 12s. 6d.

the Arabian Nights,"* and we gather from the words "First Series" on the bastard title the welcome news that there is "more to follow." The stories in their new

THEY SAW AN OFFICER AND TWO SOLDIERS.

(From "The True Story Book.")

form—they are but slightly abridged, as a matter of fact, from Galland's text of 1821—read very well, and their dress (with the exception of singularly tasteless end-papers) is particularly appropriate and attractive. An interesting fact, too, is disclosed by this book: Mr. J. D. Batten, whose illustrations to Mr. Jacobs' fairy series have won him fame in every English-speaking nursery, is even more successful in large designs reproduced by some process which gives the appearance of etching, and which allows of light and shade, than in his less ambitious black and white sketches. The frontispiece of the Sultan's Daughter contending with the Genie, for instance, is a masterpiece of decorative and illustrative design, while the picture of Sindbad's Ship pursued by the Roc is full of terror, and of the right sort of imagination. Here certainly is one of the best children's books of the year.

MR. ANDREW LANG'S ANNUAL.

Mr. Andrew Lang must take care or his name will be better known in the nursery than it is in the study. Every year now we look forward to a new book issued under his ægis, and never are we disappointed in its quality. This year, however, he has deserted fairyland for the moment, and has taken his children-readers into the realms of truth—if there can be greater truth than there is to be found in Grimm and Andersen. But his "True Story Book"† is such good reading, so interesting, and so exciting, that children will soon forget the disappointment with which he pictures the receiving "a volume full of adventures, which actually happened to real people!" Mr. Lang is delightfully catholic in his choice of subjects. Adventures among Red

Indians, Casanova's escape, Prince Charlie's escape, the Spartan Three Hundred at Thermopylæ, Kaspar Hauser, the two great University Cricket Matches of 1870 and 1875, Cæsar Borgia's escape, the tale of Isandhlwana and Rorke's Drift—the last stirringly told by Mr. Rider Haggard—and the Conquest of Montezuma's Empire are among the subjects. And for fear that a child "may fear that he is being taught under a specious pretence of diversion," the stories have been well mixed up, "so that no clear and consecutive view of history can possibly be obtained from them." To the story of the conquest of Mexico, Mr. Lang, believing it to be "the best true story in the world, the most unlikely, and the most romantic," has wisely given nearly a third of the whole book. And a rattling, stirring, exciting book of adventures it makes—as good a book of its sort as we ever expect to see. It is profusely and very well illustrated, too, as our readers can see from the pictures we reproduce. No children, we make bold to say, but will forgive Mr. Lang, when once they see the "True Story Book," for not giving them more fairy tales; but they will be joyfully expectant of the fulfilment of the promise made in the last verse of the dedication:—

For Fairyland's the land of joy,
And this the land of pain,
So back to Fairyland, my boy,
We'll journey once again!

MR. LANG'S OWN FAIRY STORY.

But, after all, we find that Mr. Lang has not deserted fairyland. He has made a fairy tale of his own, and at this he is certainly no novice. "Princess Nobody," the tale which he spun round "Dick" Doyle's

THE ZULU MARKSMANSHIP WAS POOR.

(From "The True Story Book.")

illustrations, seems as spontaneous and to the manner born as any of the old legends, while "Prince Prigio" had merits not a few. It is to "Prince Prigio" that he

* "Fairy Tales from the Arabian Nights." Edited by E. Dixon. J. M. Dent and Co. 7s. 6d. net.

† "The True Story Book." Edited by Andrew Lang. Longmans. 6s.

has now essayed to produce a sequel in "Prince Ricardo of Pantouflia";* and a very delightful story it is. Prince Ricardo is a young man who would never mind his books, but was always after a giant, or a dragon, or a magician, whom, as he was equipped with a magic carpet, seven-leagued boots, a sword of sharpness, and a cap of darkness, he never failed to conquer. Then there is a charming princess whom Prince Ricardo rescued, and who could "turn herself into anything—a mouse, a fly, a lion, a wheelbarrow, a church!"—at a moment's notice. These certainly are materials enough for a good fairy tale, and when Mr. Lang makes his hero go through all sorts of wonderful adventures, including an attempt to set Prince Charlie on the throne of England, his children readers, we find, become quite enthusiastic. Ricardo's father objects to his constant use of these magic powers, and to teach him self-reliance deprives him of them. Consequently Ricardo gets into a scrape, to liberate him from which, King Prigio has to make a journey to the Moon on a flying horse, and another journey to Manoa in Peru, Sir Walter Raleigh's City of the Sun. Mr. Lang is nothing if not modern and allusive: he brings in the game of golf and crystal-gazing, and one of his characters emulates Buckingham's behaviour when D'Artagnan came after the queen's necklace in "The Three Musketeers." Mr. Gordon Browne's many illustrations are very much in keeping with the story.

TWO MORE FAIRY BOOKS.

If those children who have been born in the last ten years are only half lucky, they will have got together quite a little library of books of fairy tales. We wonder whether they will give Sir George Douglas's "Scottish Fairy and Folk Tales"† a place. Scotch children are serious, we suppose, and they may take kindly to Sir George's scientific preface (an address delivered at the Royal Institution), and his very numerous footnotes and references; but in English nurseries, although Mr. James Torrance's twelve illustrations will find lots of favour, the Scotch dialect will prove an insuperable difficulty. Somehow the book seems a mistake; it is neither fish, flesh, nor good red herring. Certainly it wears no scientific aspect, but the language, even when Sir George writes in English, is far too involved and complicated for children to follow it with ease. Here is the making of a good book; next

Christmas it had better be produced. Another fairy book, and this time a good one, is "The Winged Wolf and Other Fairy Tales"‡ collected by a gentleman who calls himself Ha Sheen Kaf. The illustrations, which, if only fair, are very numerous, are by Mr. Arthur Layard, and the print is very large. The stories come from various sources—five are from Russia, one is Abyssinian, three seem English, and one is Eastern; all, however, are interesting—which is the chief thing to be considered. If you have Hans Andersen and Grimm, and have exhausted Mr. Lang and Mr. Jacobs, you might do worse than get "The Winged Wolf" for your children: it is sure of appreciation.

"FOR VERY LITTLE CHILDREN."

"A nursery story for very little children," Mrs. Molesworth calls her new book; but her circle of readers, we hope, will not be confined to the nursery. Certainly it is to children five, six, or seven years old that "Mary" will most of all appeal, but it is impossible for even the most hardened reader of sensation novels to read the story without being attracted and delighted by the exquisite air of artlessness, of spontaneous sympathy with children, which pervades its every page. Mary is one of the sweetest figures in child fiction; she is worthy to take place beside the same author's "Her Baby"—which is high praise indeed, and to occupy the same nursery as Mr. Carroll's Alice. Her naive, delighted remarks upon her

new sister; her solicitude for her mother's health; her baby-dignity: all these are characteristics which one feels that Mrs. Molesworth has studied from the life. It is a picture of English home-life drawn with real sympathy and knowledge, and will but confirm the general opinion that Mrs. Molesworth has, in her own sphere of writing, no rival. In its terra-cotta cover the book has a very pleasing appearance; but Mr. L. Leslie Brooke has not made the most of his opportunities in his illustrations. Another new book by Mrs. Molesworth is "The Thirteen Little Black Pigs and Other Stories" (S.P.C.K., 2s. 6d.), which is very pleasingly illustrated in black and white and in colours by Mr. W. J. Morgan. Another capital book for children, and one which is cheaper than Mrs. Molesworth's, is Leslie Laing's "Queen of the Daffodils: a Story of High School Life,"‡ from which the illustration on this page is taken. It is a good story, for Leslie Laing seems to have

MOLLIE SHOWS DIANA HER DOLLS.

‡ "Queen of the Daffodils: a Story of High School Life." By Leslie Laing. Blackie. 2s.

got at the hearts of children, and her little characters live and are not mere puppets. The incident illustrated, for instance, is told with real skill: the little child with her dolls is natural, and how seldom can this be said? Although cheap, "Queen of the Daffodils" has a really charming cover, and its illustrations are fully up to the average. Another book that may be mentioned in the same connection is the Hon. Eva Knatchbull-Hugessen's "A Hit and a Miss,"* the latest volume of that pretty series, the Dainty Books (of which another volume is Miss Mabel Wotton's "Mannerless Monkey"). There is no cant about the book, which is honest and healthy, and makes the reader almost wish to have participated in the very reprehensible episode of the jackdaw's eggs therein narrated. The book contains two stories: the second explains why neither Meg nor the "Passé Défini" girl won M. Heron's French prize; both being illustrated by Mr. Leslie Brooke.

MR. STANLEY'S GLEANINGS FOR CHILDREN.

It became the nightly custom when Mr. Stanley was ploughing his way through the heart of Africa in 1875, to gather round the camp-fire and entertain one another with stories. Black narrators were by no means scarce—they were suitably rewarded according to their merit—and sometimes when "a real aborigine of the interior" undertook to tell a tale of the old days the result was both new and startling. For seventeen years Mr. Stanley collected the choicest and most curious of these stories, and the result is now before us in a book† of very singular interest—especially to children, who will find these wonder tales of Africa something different from what they have been accustomed. It is probable that "My Dark Companions and Their Strange Stories" has a considerable ethnographical and folk-lore value beyond their interest as children's stories; but it is as the latter we must here consider them. Every tale in the book is very readable, and all are profusely and well illustrated by Mr. Walter Buckley.

OTHER GOOD CHILDREN'S BOOKS.

The exigencies of space compel us to pass over the following books which we had selected for special praise in a somewhat more perfunctory way than we had intended. It can be said, however, that each one of them is really good, and can be bought for any nursery and for any reasonable child with a certainty of its finding the utmost appreciation. To begin with, Mr. P. S. Newell's "Topsy and Turrys" (Unwin, 5s.) is as excellent a specimen of the coloured picture-book as has appeared this year. Produced in a particularly tasteful manner, its peculiarity is that each of its quaint and curious pictures is so drawn that it tells a story, whether it is looked at upside down or not. There is nothing elaborate about the pictures; they have the artlessness of Mr. Lear's little plates, and the nonsense rhymes that accompany them resemble Mr. Lear's not a little. There is hearty laughter in the book. Another picture-book of a similar class but of different type is "Select Fables from La Fontaine" (S.P.C.K., 6s.), illustrated very delightfully by M. B. de Mouvel. The rhymed renderings of the Fables are very successful. "A Book of Pictured Carols" (George Allen, 5s.) is produced under the direction of Mr. Arthur J. Gaskin, one of whose illustrations to Hans Andersen is on page 662. All the best known carols are here, delightfully printed with clever decorative designs by members of the Birmingham Art

School. It is a thoroughly artistic book. "The Princess Heliotrope; or, Peter Stummel and the Magic Cherries" (Unwin, 3s. 6d.), is a fairy story of some length, with thirty-four attractive illustrations. "Nursery Lyrics" (Bliss, Sands, and Foster, 3s. 6d.) is a collection of verses for children by Mrs. Richard Strachy, illustrated by Mr. G. P. Jacomb Hood. A novel point about this book is that spaces are left on the cover for the insertion of the initials of the owner, Mr. Hood having designed a set for the purpose, which can be cut off and affixed. But he has not allowed for the two initials being similar! Miss Dolly Radford's "Songs for Somebody" (Nutt, 3s. 6d.), with its design by Miss Gertrude Bradley, is a very charming book. Miss Radford has the true gift of children's poetry, and her book is so cheap that it ought to sell largely. It is a book for very little children. On the eve of our going to press Mrs. Hodgson Burnett's new book, "The One I Knew Best of All" (Warne, 6s.), was sent us. It is uniform with her "Little Lord Fauntleroy," is illustrated by Mr. R. Birch, and is, we gather, founded on Mrs. Burnett's reminiscences of her own childhood. Dr. Gordon Stables' "Sable and White: the Autobiography of a Show Dog" (Jarrold, 3s. 6d.), will interest children who are fond of animals. We must protest, however, against some very harrowing vivisection pages, which cannot do children any good. Mr. Harrison Weir's illustrations are excellent. A very cheap book, with coloured illustrations, is Miss Helen M. Burnside's fanciful "A Day with the Sea Urchins" (Warne, 1s. 6d.). It contains, with other letterpress, a number of songs set to music. Mr. Alfred H. Miles's "Fifty-two Stories for Children" (Hutchinson, 5s.) belongs to a series deservedly well known; and, finally, a good story for Irish children, or for children who know nothing about Ireland, is Miss Ethel Penrose's "Clear as the Noonday" (Jarrold, 3s. 6d.). It is an Irish story, very well illustrated.

SOME GOOD TOY-BOOKS.

Toy-books are so very numerous and so very cheap that they are always difficult to notice. However, you will do well to ask to see Messrs. Dean and Son's publications. They issue "Struwelpeter, Junior," and "The Modern Struwelpeter," "Clown Land," and "Railway A B C," and a bigger book entitled "Fun and Frolic for Children." Any of these you will be safe in ordering. Or you might do worse than send five shillings to Messrs. Jarrold and Sons for a selection of their new toy-books; in which case ask them to include "A Child's Dream of a Visit to London" and "The Brave Tin Soldier." Messrs. Farquharson, Roberts and Phillips can boast that their coloured books are produced entirely in England. They are very successful, especially "Aladdin's Wonderful Lamp," "From Pole to Pole," and "Dorothy's Dream." It is good to see books of this class without the legend, "Printed in Germany."

A STORY OF WONDER.

The success of the year, where boys' books are concerned, has fallen neither to Mr. Henty, to Mr. Fenn, to Mr. Leighton, nor to Dr. Stables, but to a writer whose name we do not remember to have seen before. With such gifts as are possessed by the authors we have mentioned it is comparatively easy to spin a stirring and satisfactory story out of the old materials; but Mr. Pemberton, in his "Iron Pirate,"** has done far more than this: his imagination has been at work, and he has discovered a plot, a motive, which, for sheer wonder and ingenuity, is

* "A Hit and a Miss." By the Hon. Eva Knatchbull-Hugessen. A. D. Innes. 2s. 6s.

† "My Dark Companions and their Strange Stories." By Henry M. Stanley, D.C.L. Sampson Low. 7s. 6d.

** "The Iron Pirate." By Max Pemberton. Cassell. 6s.

would be difficult to excel. In some ways he is reminiscent of M. Jules Verne. Does not Captain Black, the pirate himself, remind the reader of the captain in that other romance of abnormal maritime adventure, "Twenty Thousand Leagues under the Sea"? The iron pirate of the title is a war-ship of the present day, fitted with a magnificent armoury, and with new inventions which enable it to make thirty knots an hour and to dispense almost entirely with the necessity for coaling.

Says Captain Black, the intellect whose untiring energy and great wealth enabled this dream of a moment to become a reality: "They said at home that piracy was played out, but I asked myself, 'How's that? Give me a ship big enough, and under certain conditions I'll sweep the Atlantic!'" And sweep the Atlantic he did, retiring, when the hue and cry became too great, to a hidden harbour in Greenland, whence after a time he would swoop down again upon the steamship routes and attack Cunarder and White Star Liner, removing all their wealth of specie and precious stones and sinking them with all their passengers and crew. The enormous speed of the ship enabled her to elude pursuit; but there could be but one end to such audacity, and the oil upon which he depended for his engines having given out, the iron pirate is at last surrounded by the war-ships which the terrified European powers have sent to rid the sea of so dangerous a scourge. Two cruisers are disabled and sunk before at last Captain Black has to blow up his own ship.

The idea, it can be seen from this brief, inadequate account, is capable of infinite interest, and, on the whole, Mr. Pemberton has well availed himself of its possibilities; but his characterisation is of the weakest, and there is more than one point in the story where the critical reader would wish that he had been a little more careful in the grouping and arrangement of his incidents. It was necessary, perhaps, in the interests of morality, that the hero of the story should not have been himself one of the pirates; but the whole idea of the hunting down is but little successful, and only tentatively

dramatic. However, we have to thank Mr. Pemberton for an exciting story, and to hope that his next essay will be no less happy and a great deal more careful, for his powers both of description and of invention suffer much from the impression of carelessness. Mr. Gordon Brown's illustrations to the story are spirited and careful. Mr. F. T. Janes' picture of the iron pirate itself we reproduce.

STORIES OF GREEK HEROISM.

Professor Church is always interesting when he goes

back to classic times for his material, and in his new volume, "Pictures from Greek Life and Story,"* he has his foot on somewhat foreign ground of history than in its companion volume, the "Pictures from Roman Life and Story." But his chapters lose nothing of interest from owing less to imagination. Some of the famous tales from Herodotus; the ever fresh story of how the Greeks defeated, single-handed, the greatest monarchy of the age; striking scenes from the greatness and the fall of Athens; a view of the splendour of holy Delos, as it has been revealed to us by the spade; the impressive scene of Socrates' death: these things make up an entrancing volume of stories, and in the telling of them Mr. Church's hand has forgotten none of its cunning. The illustrations are not good enough for their company.

BY THE AUTHOR OF "IN A CANADIAN CANOE."

The success of Mr. Barry Pain has been almost phenomenal; not thirty months ago his name was quite unknown, and now

he has a reputation almost as great as any young writer of his generation. His latest book is almost a new departure for him. He had written short stories of school-life before, but this is his first serious attempt at a boys' story—his first attempt at a long story, too. Certainly "Graeme and Cyril"† deserves all the commendation that has been showered upon it. A more healthy and a more natural story of school we cannot

* "Pictures from Greek Life and Story." By the Rev. A. J. Church. Hutchinson. 5s.

† "Graeme and Cyril." By Barry Pain. Hodder and Stoughton. 6s.

(From the "Iron Pirate.")

remember having seen since "Tom Brown's Schooldays," and this is high praise indeed. Mr. Pain seems to know his boys; his characters live, and he tells his story, which is full of very lively interest, in a brisk, unaffected way that boys will be much pleased with. Mr. Gordon Browne illustrates the book.

TWO STORIES BY MR. HENTY.

Last month we noticed what we thought the best of the three stories Mr. Henty has put forth this autumn. The two that remain, however, are very good, and show a deservedly popular author almost at his finest. "Through the Sikh War" is a tale of the conquest of the Punjab, and deals with the prolonged struggle which the British had to carry on before they could make sure of maintaining their ascendancy in India. Of course Mr. Henty's hero—he has the good luck to have an uncle the Governor, under a native Prince, of a State in the Punjab—goes through the thick of all the fighting and covers himself with honours, and equally of course Mr. Henty succeeds in imparting in an exceedingly unobtrusive and inoffensive way a deal of historical information in the course of his narrative. "Through the Sikh War" has twelve illustrations by Mr. Hal Hurst, and an excellent map of the country with which it deals. Mr. Henty's other book—a shilling cheaper, as usual—is "A Jacobite Exile,"† and narrates the adventures of a young English lad, whose father, denounced as a Royalist and a plotter against the Elector, has to flee England, taking his son with him. They make their way to Sweden; there the son enters the foreign legion under Charles XII. of Sweden, and sees a deal of fighting against the Russians and Poles.

THE NEW JULES VERNE.

To consider the new boys' books of the season without noticing M. Jules Verne's annual story seems almost sacrilege. However, we only received "The Castle of the Carpathians"‡ on the eve of going to press, so we are unable to say more than that the illustrations, as numerous as ever, point to no loosing of power in M. Verne's invention. Indeed, some of the weirdest pictures suggest that he has gone even further into the wonderful than is his wont, and has essayed the frankly supernatural. Or what else does the picture of the man shrinking back affrighted from the horrid shapes of huge air dragons, who are circling round the peaked castle, portend? In the same way we have been unable to do more than glance at Mr. Pierre Maël's "Under the Sea to the North Pole" (Sampson Low, 6s.). Certainly the illustrations are very enticing. Other boys' books, which are certainly good, and which, if space allowed, we should be glad to notice at greater length, are Mr. Hume Nisbet's "Valdmer the Viking: a Romance of the Eleventh Century by Sea and Land" (Hutchinson, 3s. 6d.);

Mr. J. Hain Friswell's illustrated essays in popular biography, "Footsteps to Fame: a Book to Open Other Books" (John Hogg, 3s. 6d.); "The Story of Napoleon Bonaparte" (Chambers, 1s.), and Mr. Robert Chambers's "Story of the Life of Sir Walter Scott" (Chambers, 1s.)—both admirably written biographies. The majority of Messrs. W. and R. Chambers's books, however, reached us too late for notice. A book of adventure above the average in ability and excitement—it tells the story of a search for buried treasure—is Mr. John Blount-delle-Burton's "The Desert Ship" (Hutchinson, 5s.); while Dr. Gordon Stables' "Westward with Columbus" (Blackie, 5s.), which has Columbus himself for hero, and "Just like Jack" (Hodder and Stoughton, 5s.), are to be commended, although it may be questioned whether Dr. Stables does not write too much. Mr. Robert Leighton's two books, "In the Grip of the Algerine" (Sunday School Union, 3s. 6d.), and "The Wreck of the *Golden Fleece*" (Blackie, 5s.), are well conceived and written. Messrs.

MR. G. A. HENTY.

(From a photograph by the Stereoscopic Company.)

Blackie also publish a new edition of Mr. Manville Fenn's story of Cornish nets and mines, "Menhardoc," at 3s.; and Messrs. S. W. Partridge and Co. publish a new story by him, "Steve Young; or, The Voyage of the *Hvalros* to Icy Seas," at 5s. And finally, we can commend Mr. H. C. Adams' "In the Fifteens: a Tale of the First Jacobite Insurrection" (Hodder and Stoughton, 5s.); Mr. J. Fitzgerald Oxley's "Fergus Mac-tavish" (Hodder and Stoughton, 5s.), which would make an admirable Sunday-school prize, would Mr. Oxley only correct his notion of humour (p. 65); Mr. F. M. Holmes's "Raff's Rancho: a Story of Adventure among Cow-boys and Indians" (Blackie, 2s.); and the new edition of Mr. R. M. Ballantyne's "Eagle Cliff" (S. W. Partridge and Co., 2s. 6d.). All these books are very well illustrated—which reminds us that Messrs. Blackie have just reissued their excellent editions of "Robinson Crusoe" and "Gulliver's Travels" at three shillings each. Each of these books contains over a hundred illustrations by Mr. Gordon Browne.

TWO GOOD GIRLS' BOOKS.

Among girls' books the success of the year has fallen, we think, to Mr. George Norway, whose "True Cornish Maid" is really an admirable piece of work. With its scene laid at Crantock, within two miles of Newquay, on the north coast of Cornwall, the book is full of vivid and accurate local colour; it contains, too, some very clever character studies. Mr. Norway seems to know the Cornish folk thoroughly, and his picture of the moral struggle between brother and sister gains much in interest from being laid in so picturesque a country. The period of the story is about a century ago, and naturally smuggling plays no unimportant part. The illustrations to the volume are by Mr. J. Finnemor. Also very good, in its way—a totally different way—is Miss Fanny E. Newberry's "Impress of a Gentlewoman," which is sufficiently clever to dispense with the addition of

* "Through the Sikh War." By G. A. Henty. Blackie. 6s.

† "A Jacobite Exile." By G. A. Henty. Blackie. 5s.

‡ "The Castle of the Carpathians." By Jules Verne. Sampson Low. 6s.

† "The Impress of a Gentlewoman." By Fanny E. Newberry. Hutchinson.

THE FIRST PRIMROSE.
(From "Our Village.")

interest gained by the fact that to it fell the prize offered for competition by an American publisher, and that, having met with a great success there, it is now, by arrangement, reproduced from American plates. It is a story more of character than of incident, for it all turns upon the influence which one womanly woman has upon the rough inhabitants of a township in the Far West. The book is well illustrated. Another girls' story that we can recommend is Miss Maggie Maclean's "Romance of Skye" (Oliphant, 5s.).

ANNUAL VOLUMES.

To us it has always seemed that the way to get the most value for your money in the way of a Christmas gift book, was to get one of the annual volumes of the magazines. Thus, for instance, the volume of the *Magazine of Art* (Cassell, 18s.), with its splendid engravings of well-known pictures, and interesting letterpress—this year it includes twelve "Carols of the Year," by Mr. Swinburne—makes quite a magnificent present. Rather cheaper are those admirable miscellanies of good healthy reading, the *Sunday Magazine* and *Good Words* (Isbister, 7s. 6d. each), while the volume of *Cassell's Family Magazine* (Cassell, 9s.) contains enough reading to last most people for a year, and has almost a picture to every page. The *Leisure Hour* and the *Sunday at Home* (R. T. S., 7s. 6d. each) should also find many purchasers: each volume contains about a dozen times as much as an ordinary six shilling story. The volumes of two girls' magazines both make excellent and imposing gift-books: *Atalanta* (5A Paternoster Row, 8s.) contains, for instance, the whole of Mr. Stevenson's last story "Catriona;" while *Sylvia's Journal*, which takes the name of "Sylvia's Annual" (Ward and Lock, 7s. 6d.), contains more interesting matter of actual, up-to-date kind than any other journal of its kind. Miss May Kendall's story, "White Poppies," is here, and Mr. Anning Bell's clever illustrations. Then there is a good series of "Chats with Celebrities," instruction in needlework, "Toilet Talks," a series of "Peeps into a French Kitchen," and a collection of critical papers by Miss Katharine Tynan on "Tennyson's Heroines." Certainly, under the editorship of Mrs. Graham R. Tomson, *Sylvia's Journal* appeals to a very wide class. The "Girl's Own Annual" and the "Boy's Own Annual" (R. T. S., 7s. 6d. each) come last, but they are far from being the least interesting. Both contain many admirable serials and illustrations, and shorter stories and articles galore. M. Jules Verne's new story, for instance, is all in the "Boys' Own Annual."

GIFT BOOKS FOR GROWN-UPS.

We have left ourselves so little space that it will be necessary to confine our selection of books suitable for presents for grown-up people to the very best. Certainly each of the following may be ordered with a certainty of it being admirably suited to

its purpose; the production of tasteful books of this class has become an art, and the books we mention are the best specimens of it. First and foremost, of course, comes Miss Mitford's "Our Village,"* in the Cranford Series, uniform with the editions of "The Vicar of Wakefield" and "Cranford" of the last two years. It is a beautiful volume, Mr. Hugh Thomson's illustrations—two of the smaller of which we reproduce—being as delicate and clever as ever, and Mrs. Thackeray Ritchie's (Miss Thackeray) introduction being a very interesting and careful piece of writing. Miss Mitford is too little read nowadays: it is to be hoped that this delightful reprint will bring back her popularity. Another volume of the same series is Thomas Hood's "Humorous Poems," also published by Messrs. Macmillan. Here the illustrations are by Mr. Charles E. Brock, whose work will even bear comparison with Mr. Thomson's. The different characters are admirably represented. The critical preface is by Canon Ainger, who is sensibly brief and very interesting.

BY MR. AUSTIN DOBSON.

Delightful is also the word to apply to the new edition of Mr. Dobson's "Proverbs in Porcelain,"† illustrated with singular success by Mr. J. Bernard Partridge. "I confess that I felt some misgiving whether these miniature studies, so frail in structure, would lend themselves readily to pictorial embodiment," says Mr. Dobson.

PEACEFUL EVENING.
(From "Our Village.")

For this certainly there was no necessity: Mr. Partridge's illustrations are thoroughly in keeping with the atmosphere of Mr. Dobson's verse. Together they make a book that cannot be excelled for sheer delight among the books of the season.

* "Our Village." By Mary Russell Mitford. Macmillan. 6s.
† "Proverbs in Porcelain." By Austin Dobson. Kegan Paul.

OTHER NEW BOOKS OF THE MONTH.

MICHEL, ÉMILE. *Rembrandt: His Life, His Work, and His Time.* (Heinemann.) Two volumes. Folio. Cloth. Pp. xxiv. 320, 294. £2 2s. net.

Here surely is the finest art book that has appeared for many a year—certainly it is the noblest and most sumptuous work, from the technical point of view, that the present twelve months has seen; and for those who can afford the price asked (a very small one, all things considered) it will doubtless be the gift-book of the year. Every one who knows anything at all about art knows that M. Michel is the great authority upon Rembrandt, "that pictorial artist," as Mr. Frederick Wedmore says in his brief editorial preface, "whom all schools of criticism unite to honour"; and it should be matter for general artistic congratulation that a publisher has been found to produce upon a scale so worthy and so magnificent a translation of his great work on the subject he has made his own. Sixty-seven full-page plates of Rembrandt's most important pictures, reproduced by a special and very successful process, and printed on plate paper, are distributed through the two volumes, together with two hundred and fifty smaller, but not less careful, illustrations in the text. Certainly the plates are the finest examples of mechanical reproduction that we have ever seen. One is glad to see that M. Michel's co-operation with Mr. Heinemann and Mr. Wedmore in the production of this very important work enabled a large number of corrections to be made which were not in the French edition, which is, we are told by the way, not a little inferior to the English edition in illustrations. Miss Florence Simmonds is the very capable translator, and she, Mr. Heinemann, and Mr. Wedmore deserve the heartiest congratulations upon the issue of their task. It is a book which no large library should be without.

MAXWELL, SIR HERBERT, BART., M.P. *Life and Times of the Right Honourable William Henry Smith, M.P.* (Blackwood.) Two volumes. 8vo. Cloth. Pp. 360, 374. 25s.

The political reader who comes to these handsome volumes in the hope that they will shed new light upon the political history of the last few years will be disappointed. Here we have but the commonplaces of political knowledge: Sir Herbert Maxwell has no new thing to tell his readers that they could not have known before; but for all this lack of the sensational elements that so often make exciting a political biography, the book is one of intense interest. Smith's was a career not particularly eventful; it had no violent experiences; but it was a life thoroughly English and typical—a life given over to business and to duty. He was born in 1825, in the house in the Strand which was the forerunner of the huge undertaking that now bears his name. Early taken into partnership by his father, he had to work harder than most people work nowadays, and then, no doubt, he laid the habits of concentration and attention which served him in such good stead in the extraordinarily heavy duties of the last few years of his life. "For several years it was Smith's practice to rise each week-day at four in the morning, swallow a cup of coffee, and drive to the Strand office, by five a.m. People still in the business (1854) can remember how he was then the central figure in the paper-sorting office, with coat off, shirt sleeves rolled back, and hands and arms deeply dyed with printers' ink off the wet sheets." The whole story of the rise and gradual development of the firm of W. H. Smith and Son is told in a very picturesque and interesting manner.

O'BRIEN, R. BARRY. *The Autobiography of Theobald Wolfe Tone, 1763—1798.* (T. Fisher Unwin.) Two volumes. 4to. Cloth. Pp. xxxi. 321, 431. 32s.

A reprint of Wolfe Tone's *Journal* from the edition which his son published in Washington in 1826, and which has long been very difficult to procure, has always been a great desideratum in Irish political biography. In spite of the Duke of Wellington's saying that "he was an extraordinary man, and his history was the most curious history of those times," it cannot be denied that the name and fame of this great and formidable Irish rebel have fallen upon evil days. The story of a man who might have had so profound an influence upon the history of the Empire cannot but be interesting to all classes of readers, and these two portly volumes should secure a wide public. "Was there hope of success?" asks Mr. O'Brien, in his admirable and unduly short introduction, of Tone's attempt to sever Ireland from England. And he answers his question: "There can be no doubt of the fact. Mr. Froude and Mr. Goldwin Smith answer it in the affirmative. Had Grouchy (the French general) been equal to the situation; had he yielded to the importunities of Tone and landed at Bantry Bay in December, 1796, Ireland would have then been lost to Britain." But apart from its historical value, these journals for exciting and absorbing interest would be difficult to excel. Tone was a constant adventurer, and no chapter of his life but is more sensational than the average novel. The volumes contain many fine portraits, and a facsimile of one of Wolfe Tone's letters written to his father in 1798.

GALE, NORMAN. *Orchard Songs.* (Elkin Mathews and John Lane.) Fcap. 8vo. Cloth. Pp. 112. 5s. net.

"No more," said Mr. Norman Gale over a year ago in the last lines of the first series of his "Country Muse," "will I, made musical, salute the Spring," and he proceeded in the same poem to proclaim his intention of daring—

— the steep that bounds the plain;
Teaching my soul its duty, stern and tender,
Singing the truth that only comes through pain."

One looked, therefore, with some interest for more ambitious poems from his pen. The second series of "A Country Muse" had the qualities of the first, and now comes "Orchard Songs," and still we find Mr. Gale singing of "living fluff," of "sweetheart captures of the waist," of "Mary's white," and all the other beauties of country-side and country maid he knows so well to translate into verse. But, although it were churlish to take Mr. Gale too much at his word, and to quarrel at the sameness of his subjects, yet it cannot be denied that "Orchard Songs" shows no improvement upon "A Country Muse." There seems a tendency to crystallisation of style and epithet which detracts not a little from the pleasing spontaneity of his earlier lyrics. However, to readers who have not founded too great hopes upon the promise of Mr. Gale's first books, the volume will be a pleasing one: here and there, as in "Dawn and Dark," "The Nightingale," and "Cicely Bathing," we have him at his most melodious; in other poems he has essayed metres somewhat sharp and less musical. His "Hannibal, Sagunto Capto, Loquitur," is his most ambitious effort, and, on the whole, it is successful; "A Defence (Written on being Charged with Undue Frankness)" also deserves notice.

BIOGRAPHY.

ESPINASSE, FRANCIS. Literary Recollections and Sketches. (Hodder and Stoughton.) 8vo. Cloth. Pp. 426. 12s.

This book is based upon a series of articles, signed *E*, which have been appearing in the *Bookman* since its commencement in 1891; but the matter has been revised and very considerably added to, while two new articles, "Literary Journalism" (in which Mr. Espinasse contributes largely to what is known of the history of various great publishing houses of the present day), and "Later Edinburgh Memories" (which includes reminiscences of Alexander Smith, John Stuart Mill, the Blackwoods, George Elliot, and Thackeray) now appear for the first time. The other chapters are entitled: "Some Early Reminiscences" (two of Burns' heroines, Sir Walter Scott, Campbell, Lord Jeffrey, and Wordsworth figure here), "The British Museum Library Fifty Years Ago, and After," "Concerning the Organization of Literature," "The Carlyles and a Segment of the Circle: Recollections and Reflections," "George Henry Lewis and George Eliot," "James Haunay and His Friends," "Leigh Hunt and His Second Journal," "Manchester Memories: Edwin Waugh," "Lord Beaconsfield and His Minor Biographers." To find a more interesting or a more valuable volume of literary recollections, one would have to go back not months but years. But it reflects discredit upon author or publisher that the book should have been allowed to go forth to the public without an index.

LE FANU, W. R. Seventy Years of Irish Life, being Anecdotes and Reminiscences. (Edward Arnold.) 8vo. Cloth. Pp. 306. 16s.

A very entertaining and amusing book, whose value will be much enhanced to many readers by the fact that Mr. Le Fanu includes many reminiscences and anecdotes of his brother, Sheridan Le Fanu, the novelist, of whose life no account has hitherto appeared. Among the eminent men with whom the author was acquainted, and of whom he tells stories and anecdotes, were Thackeray, O'Connell, Sir William Maxwell, and Anthony Trollope. "In politics," he says, "I have never taken any part—I have tried, I hope successfully, to keep clear of them in what I have written." The book contains portraits of the author and of his brother, but no index!

Recollections of Life and Work, being the Autobiography of Louisa Twining. (Edward Arnold.) 8vo. Cloth. Pp. 291. 15s.

An exceedingly entertaining volume of recollections extending over a period of fifty years. Born in 1820, Miss Twining spent her life in the service of her sex and of the race, taking part in most of the great social movements of the time, of the growth and origin of which she has recorded many valuable and interesting facts. She lived, in fact, in the great world, and her pages bristle with great names—the names of actors, singers, divines, statesmen, and schoolmasters.

ESSAYS, CRITICISMS AND BELES-LETTRES.

KNIGHT, JOSEPH. Theatrical Notes. (Lawrence and Bullen.) 8vo. Cloth. Pp. 321. 6s.

In England, where dramatic criticism has never assumed the literary importance which it has had in Paris, there is but little modern dramatic literature of value. It is possible, however, that the improvement in the literary tone of our stage may make it more and more the fashion to reprint that portion of current dramatic criticism which will be of permanent historical value. Mr. Walkley has done so with the best effect in his delightful "Playhouse Impressions," now Mr. Joseph Knight, always one of the most learned and reliable of our critics, has reprinted from the *Athenæum* his contributions upon the stage between the years 1874 and 1879, and Mr. William Archer is said to be contemplating the reprinting of his *World* articles. Mr. Knight's volume "does not aim at supplying a full chronicle of the London stage during the period which it covers, notices of very many pieces of ephemeral nature or interest having been excised." In a short introduction, Mr. Knight traces some of the more general influences which were at work in the years of which his book treats. The volume contains an admirable portrait of Mr. Knight, and a good index; and it should be added that if success crowns the present volume, a second will appear linking "the dramas of Byron, Willis and Albery with Mr. Pinero, Mr. Henry Arthur Jones, and Mr. Grundy."

LYNCH, E. M. The Boy-God, Troublesome and Vengeful. (T. Fisher Unwin.) Crown 8vo. Half parchment. Pp. 176. 5s. Illustrated.

The scene of this book is Camelot College, a seminary for young women. One of the mistresses and four of her pupils get up a discussion, a sort of debate, on Love; the general opinion being that it is a futile waste of time, and that the "philandering instinct" must be discountenanced and gradually eradicated. This discussion takes up the whole book, and makes in parts exceedingly witty and entertaining reading, the characters of the different girls being very cleverly brought out. The term ends, and the girls leave school, vowing never to give way to the effeminate passion they have so strongly condemned. And, of course, the boy-god, Cupid, immediately takes revenge for the slight that they have put upon him, for the two girls who most strenuously denied his claims to forbearance both become engaged within twelve months of the debate at which they had spoken with such determination. It is a clever fantasy, cleverly worked out, sparkling and original.

WALLACE, WILLIAM. Scotland Yesterday: Some Old Friends. (Hodder and Stoughton.) Crown 8vo. Cloth. Pp. 240. 6s.

An attempt, by a series of sketches founded on papers which Mr. Wallace contributed some time ago to the *Glasgow Herald*, "to reproduce life behind the scenes—life as it was lived yesterday, in the first instance, in a typical village in the east of Scotland; in the second, in a typical county town in the

west." The dominating note of the village was character, and here Mr. Wallace has chosen such subjects as "The Poacher," "The Fisherman," "The Village-Hampton," "The Prize Pupil"; good-natured worldliness was the note of the town, and here Mr. Wallace has selected for treatment "The Knowing Politician," "The Clergyman of all Work," "The Old Lady of Quality," "The Popular Target," "The Bibulous Satirist," and similar typical figures.

FICTION.

ALLEN, GRANT. An Army Doctor's Romance. (Raphael Tuck and Sons.) Paper Covers. 1s. Illustrated.

A tale of love, of cross-purposes, and of an incident in the Matibele war, which, according to Mr. Grant Allen, breaks out again in the spring of next year. It is an unimportant piece of work, which Mr. Grant Allen's admirers will do well to ignore.

ARNOLD, ETHEL M. Platonics: A Study. (Osgood.) Fcap. 8vo. Cloth. Pp. 128.

There is a deal of cleverness in this little book, but not of the cleverness which appeals to the general public. Miss Arnold has not only told a story, but she has made an artistic attempt, and very fair success has crowned her efforts. The characters, perhaps, are a little choked with analysis, but they are honestly wrought, and the whole book suggests, if it does not carry, conviction. In its title, "Platonics" is unhappy and incorrect, but it is a book to be read by all who are watching the latest tentative developments of English fiction.

BARRETT, FRANK. The Woman of the Iron Bracelets. (Chaffo and Windus.) Three volumes. 31s. 6d.

Mr. Barrett produces book after book with such surprising celerity that it is not to be wondered at that he has at last missed fire. In truth, his new novel makes but poor reading: its plot would make a good short story, but spun out to three-volume length it becomes quite uninteresting—and it seems to show signs that Mr. Barrett found it somewhat uninteresting writing. The woman with the iron bracelets is wrongfully accused of murder, is arrested, but escapes in a railway accident, the three volumes being mainly taken up with the hopes and the fears of the somewhat fatuous old gentleman who writes the book (this habit of Mr. Barrett's of telling his story through the personality of some tedious character is becoming very tiresome) for her safety. And when the last chapter is reached, we find that after all she had been acquitted of the murder a day or two after the railway accident, in which the police had thought she had perished! The villain of the book, by the way, works all his evils by the aid of animal magnetism and hypnotism.

BATSON, MRS. STEPHEN. Such a Lord is Love: a Woman's Heart Tragedy. (A. D. Innes.) Two volumes. 21s.

Mrs. Batson, who now stands confessed as the author of that very promising novel "Dark: a Tale of the Down County," has not improved upon her first essay in fiction. Here is a very commonplace story, told without redeeming qualities to make it interesting. The book commences with a marriage, and ends with a reconciliation between an injured husband and a penitent wife, the "tragedy" of the title being in the fact that, despite the reconciliation, the wife can never thoroughly forgive or trust her husband. As a picture of country life the story has a certain interest, but it is rambling, and the characters have little to commend them.

BLACKMORE, R. D. Clara Vaughan and Alice Lorraine. (Sampson Low.) Crown 8vo. Cloth. 2s. 6d. each.

The latest volumes of the cheap re-issue of Mr. Blackmore's novels which Messrs. Sampson Low are publishing at monthly intervals. In the same series, following other works by the same authors, they have also published Mr. William Black's "Strange Adventures of a House Boat," Mr. W. Clark Russell's "Ocean Freeland," and Dr. George MacDonald's "Vicar's Daughter," this last, being the first of its author's books to appear in the series, contains as frontispiece an excellent colotype portrait of Dr. MacDonald. There is no cheaper or better looking library of modern fiction.

CHERBULIEZ, VICTOR. The Tutor's Secret. (Edward Arnold.) Crown 8vo. Cloth. Pp. 343. 6s.

A translation by Mr. Paul Derechhoff of Cherbuliez' "Le Secret du Précepteur."

CHESNEY, GENERAL SIR GEORGE, K.C.B., M.P. The Lesters; or, A Capitalist's Labour. (Smith and Elder.) Three volumes. 31s. 6d.

Sir George Chesney has been well known as a thoughtful and forcible writer ever since the appearance of his little pamphlet, "The Battle of Dorking," and "The Lesters" will add to his reputation. As a novel, it is interesting and sometimes exciting; but it would be even more so if it were pruned of a few at least of the digressions which Sir George allows himself, and which interfere not a little with the progress of the story.

DUMAS, ALEXANDRE. The Three Musketeers. (J. M. Dent and Co.) Two volumes. Crown 8vo. Cloth. Pp. 428, 418. 7s. 6d.

Very curiously, despite the great popularity which the romances of Dumas have always had in this country, there has never been an adequate or trustworthy English edition. He has been enthusiastically praised by Thackeray, by Mr. Andrew Lang, by Mr. W. E. Henley, by Mr. Saintsbury, and yet we have had to wait for a good translation until America has seen fit to send us one. The fact, however, that the present re-issue of Dumas' novels is printed (and admirably printed by the way) in America, should in no way interfere with its sale in England: its cover is English and has that great tastefulness

which one associates with Messrs. J. M. Dent and Co.'s publications, and the reproduction of historical portraits as illustrations leaves nothing to be desired, although similar praise cannot be given to the imaginative pictures. Previous editions of this and other romances by Dumas which have appeared in England have been somewhat abridged: in the present edition, which is to be in forty-eight volumes, and is to contain five stories never before translated, all this matter has been restored, the translation scrupulously following the author's own text. Indeed, the story now reads admirably, and bears no mark of its American origin. Here, in fact, is the edition of Dumas—the definitive one, unless some English writer of eminence essays the huge task of translation. Successing stories will appear at monthly intervals.

EGERTON, GEORGE. *Keynotes*. (Elkin Mathews and John Lane.) Crown 8vo. Cloth. Pp. 184. 3s. 6d. net.

Some woman has put her soul into this book. That it is not the work of a man, every page clearly shows; not one of its six stories but proclaims the feminine observer, a woman's experience. Sometimes, indeed, "George Egerton" flashes a light so penetrating, so pitiless, upon her women characters, that the reader has almost a sensation of participation in a betrayal of her sex, a disloyal, an unfair unweaving of their minds. It is an admirably written book, too, and a daring, for it has hardly a situation but has those peculiarities from which it has been said this English writer of fiction shrinks abashed. And yet it is delicate, and very literary work; the very ravings of *delirium tremens* become artful under "George Egerton's" treatment. The first story is not the best. In fact, with its repellence, and its insistence on the irrelevant, it is not easily comprehensible; but every line of the book gives the impression that here some woman has crystallised her life's drama, has written down her soul upon the page.

FAWCETT, E. DOUGLAS. *Hartmann the Anarchist; or, The Doom of the Great City*. (Edward Arnold.) Crown 8vo. Cloth. Pp. 214. 3s. 6d.

A reprint, with the original illustrations by Mr. Fred. T. Jane, of the sensational story of modern London which has recently been running through the *English Illustrated Magazine*, and which from time to time has been noticed in the REVIEW OF REVIEWS.

HARLAND, HENRY. *Mademoiselle Miss*. (Heinemann.) Crown 8vo. Cloth. Pp. 192. 3s. 6d.

Murger's "*La Vie de Bohème*" is a book almost forgotten, so that Mr. Harland's two incursions into the same life of Paris to-day will come as a novel experience to most of his readers. It is not effifying, this glimpse into a world which, luckily for everyone concerned, is fast falling away; but Mr. Harland has treated his subjects with real feeling and delicacy, and none but the very young and inexperienced are likely to be attracted by the life which he depicts. Two only out of the five stories deal with Parisian student-life. "The Prodigal Father" is a distinctly amusing study of modern society, and "A Light Sovereign" has something both in subject and treatment of the brightness which one associates with Mr. Stevenson's "New Arabian Nights." In "A Sleeveless Errand," Mr. Harland has a more commonplace and serious theme, and here he is most commonplace; but on the whole it may be said that "*Mademoiselle Miss*" is a distinctly entertaining volume, well written, with a distinct literary flavour, and that it is the best work that its author has yet produced.

HOCKING, SILAS K. *One in Charity*. (Warne.) Crown 8vo. Cloth. Pp. 470. 3s. 6d. Illustrated by Mr. Gordon Browne.

KERNAHAN, COULSON. *A Book of Strange Sins*. (Ward and Lock.) Crown 8vo. Cloth. Pp. 195.

Readers of Mr. Coulson Kernahan's powerful "Dead Man's Diary" will turn to his second book with keenly-whetted anticipation, nor will they be disappointed. "A Book of Strange Sins" has many faults; (its apparently catch-penny title is one of them), but it is a strong book, a book which one reads with a sense of the writer's sincerity and moral purpose. Two of its stories, "The Lonely God" and "The Garden of God," fantasies rather in the manner of Miss Schreiner's "Dreams," are out of place, and are not particularly successful, for with these two exceptions each story is "a study of some form of crime or sin." Anticipating the accusation of sensationalism, Mr. Kernahan denies that he has dwelt unduly upon the details of any crime or sin. "It is not," he says, "the sordid particulars of crime and sin which I have tried to lay bare in these pages, but the influence of these crimes; and also upon the men and women who commit them. It is the secrets of souls and not of sins into which I have attempted to look." One of the stories, "A Literary Gent," is as realistic and terrible a study of dipsomania and its mental and physical effects as we have read; here, perhaps, Mr. Kernahan is at his best. In the matter of style he is uneven; sometimes he is forcible and picturesque, at others he sinks to the merest commonplaces of pedestrianism.

LYON, GILBERTA, M. F. *For Good or Evil*. (Gay and Bird.) Two volumes. 21s.

MCCARTHY, JUSTIN, M.P. *Red Diamonds*. (Chatto and Windus.) Three volumes. 31s. 6d.

This is a book full of adventure, excitement, and variety. Mr. M. McCarthy's well-known versatility has enabled him to see life in many aspects, and he has epitomised much of his experience in the Voyagers' Club in St. James's Street, where the much-travelled and adventurous characters of this book chiefly congregate. The diamonds carry on the tradition of literature of this order, and become the occasion of many dark deeds. Ratt Gunny, one of the participants in the wealth of diamonds, the traveller *roué*, the aristocrat, the man with a past and with a future, is a character of real interest. The mysterious French fencing-master, also, with his double personality is well

conceived and well-drawn. The scene on the rotten wharf on the river, with the deadly struggle between the two men, is only one among the many stirring features of this exciting book. Especially does Mr. McCarthy know how to conjure up for us London, the cosmopolitan centre of Empire, and his descriptions of Chelsea and the river are well done. Definitely a book to read.

MOLLOY, FITZGERALD. *An Excellent Kuava*. (Hutchinson.) Three volumes. 31s. 6d.

This is a really interesting detective story, not slovenly, as so often is work of its class, but carefully worked out and readable right through its three volumes. When the Paris mail comes into the station at Victoria, an otherwise empty carriage is found to have a newspaper spread between the seats, one corner carefully tucked under the cushions. "Hi! Jack, call a policeman," shouted the porter. "What's the matter?" "Matter! why, murder's the matter, or I'm much mistaken." The interest of the plot centres round a famous detective and a lady artist—who takes her coffee out of an Eastern service of amber and gold!

MOORE, FRANK FRANKFORT. *Daireen*. (Hutchinson.) Crown 8vo. Cloth. Pp. 372. 6s.

This new edition of a work originally published in two volumes by Messrs. Smith, Elder and Co. acquires a national interest from the fact that Mr. Moore has gained for himself, since its first appearance, by the very great merit of his "*I Forbid the Banus*," a foremost place among the rising novelists of the day.

MURRAY, DAVID CHRISTIE. *A Wasted Crime*. (Chatto and Windus.) Two volumes. 21s.

There is no line of padding in this book, no incident, no reflection, which does not lead up to its tragic end. It is a tale of a useless murder—a murder committed by a woman in order to secure for herself the title and fortune which, if her husband's father lived, would, she feared, be willed elsewhere. The chapter in which both Robert Autley and his father both lie at death's door—and it is a question which shall die first—is one of the most powerful that Mr. Christie Murray has ever written. She succumbs to a moment's temptation, administers an over-draught to her father-in-law, only to learn directly he is dead that her husband's life is safe, and that, had she lingered but a few minutes, the temptation and necessity for her crime would have vanished. Only the doctor could know what she had done, and he chose to consign her rather to a life of remorse than to the felon's dock. Her final act of suicide was the only fit ending to a very strong and readable novel.

PICKERING, PERCIVAL. *A Life Awry*. (Bliss, Sands, and Foster.) Three volumes. 31s. 6d.

Browning's line, "What need to strive with a life awry?" is the source of Mr. Pickering's title, and it well suggests the contents of his book. A man returning after a long absence to the girl whom he loves, hoping to win her as his wife, finds that a neglected accident has transformed her from a straight beautiful girl into a cripple and an invalid! His love changes almost to dislike, and the story turns upon this little cripple's hopeless, helpless affection, which at last drives her to despair and suicide.

ROWAN, HAMILTON. *The Story of Sylvia*. (Ward and Lock.) Crown 8vo. Cloth. Pp. 350. 3s. 6d. With frontispiece by Mr. W. S. Stacey.

SPILLMANN, JOSEPH. *Die Wunderblume von Woxindon*. (Herder, Freiburg im Breisgau.) Two volumes. Paper Covers. Pp. 332 and 304. 5 Marks.

An historical novel (in German) founded on the last year of Mary Stuart's life, and the story of the wonderful shrub at Woxindon, which is related in Mr. J. Morris's "Troubles of Our Catholic Forefathers."

SWAN, ANNIE S. *A Bitter Debt: A Tale of the Black Country*. (Hutchinson.) Crown 8vo. Cloth. Pp. 381. 5s. Illustrated by Mr. D. Murray Smith.

HISTORY.

ASHTON, JOHN. *A History of English Lotteries now for the First Time Written*. (Leadenhall Press.) 8vo. Cloth. Pp. 359. 12s. 6d.

This book is illustrated with a large number of curious old engravings and facsimiles of lottery handbills. Mr. Ashton has traced the history of the lottery in England from 1563 to the present time.

GREEN, J. R., M.A. *A Short History of the English People*. Volume III. (Macmillan.) 4to. Cloth. Pp. 1409. 12s. net.

Under the editorship of Mr. J. R. Green and of Miss Kate Norgate, this magnificent edition of Green's "Short History" is making excellent progress. The very numerous illustrations, both in colour and in the text, are as successful as in the previous volumes, the present volume having as frontispiece a large plate of the first genuine picture of Old London Bridge, dated about 1600. This is a book that no public or school library should be without; its illustrations will be of incalculable educational value. It should be added that this edition is also appearing in monthly parts at a shilling each, net, the last part being number twenty-seven.

MISCELLANEOUS.

Cataloguing Rules. (Simpkin.) Paper Covers. Pp. 28. 6d.

A reprint of the Cataloguing Rules of the British Museum, of the Bodleian Library, and of the Library Association.

DAVIES, MRS. RUSSELL. *The Clairvoyance of Bessie Williams.* (Bliss, Sands, and Foster.) Crown 8vo. Cloth. Pp. 270. 6s. With portrait.

In many respects this volume may be considered the sequel to Miss Florence Marryat's "There is No Death," in which the experiences of Bessie Fitzgerald—whose maiden name was Bessie Williams—figure so prominently. The charm of the book lies in the simple language in which the various stories are told, and the calm belief of the writer who merely stating what she conceives to be facts, leaves deductions to her readers. Mrs. Davies finally lays great stress upon the danger of dabbling in Spiritualism, and placing oneself, so to speak, at the service of spirits of a low order.

GOUIN, FRANÇOIS. *A First Lesson in French.* (George Philip and Sons.) Crown 8vo. Cloth. Pp. 83. 2s. 6d. net.

Readers of the REVIEW OF REVIEWS have been kept well informed of the progress of the particular method of teaching languages which M. Gouin invented, and which Mr. Howard Swan and M. Victor Bétis have done so much to make popular in England. This little book is the first of a series of practical handbooks to the method, and, with its aid, both teacher and pupil will have no difficulty in thoroughly mastering both the theory and practice of the system. The translation is by Mr. Swan and M. Bétis.

HARDY, MR. W. J., F.S.A. *The Handwriting of the Kings and Queens of England.* (Religious Tract Society.) Imp. 8vo. Pp. 176. Price 10s. 6d.

Apart altogether from the curious interest which attaches to the specimens of royal calligraphy here collected and arranged, there is much of historical interest and importance which will amply reward the reader; and the sumptuous way in which the photogravures and reproductions have been executed make it a very suitable gift-book for the season. Some of the articles originally appeared in the *Leisure Hour*, but since then many interesting examples of royal penmanship have been discovered by the Deputy-Keeper of the Public Records. No royal handwriting is given in the book earlier than that of Edward the Black Prince in 1370; some of the most interesting specimens of handwriting are those of Henry VIII. and his wives, and those of Queen Elizabeth.

PHILIPS, MELVILLE (Editor). *The Making of a Newspaper.* (G. P. Putnam's Sons.) 16mo. Pp. 322. 5s.

Probably no single institution of our stirring modern life has in it more elements of a wide popular interest than journalism. "The Making of a Newspaper" consists of a series of articles, many of which appeared in *Lippincott's Magazine*, by representative American journalists, written with the vigorous freshness and directness characteristic of the craft. Nowhere else can the outside world find a more entertaining and comprehensive view of the chief phases of the wonderful newspaper work which goes on unceasingly, and is for the most part hidden from the vulgar eye. The experiences of reporter, travelling correspondent, literary editor, managing editor, and others given here are delightfully personal and full of local colour, but that rather enhances than otherwise their informational, educational value. American journalism, of course, differs largely in many respects from that with which we are familiar in this country; but our own newspapers might with advantage adopt many of the points set forth in these sprightly pages.

WALE, BURLINGTON B. *The Day of Preparation.* (Elliot Stock.) Crown 8vo. Cloth. Pp. 358. 5s.

POETRY, MUSIC AND THE DRAMA.

BELL, MACKENZIE. *Spring's Immortality and other Poems.* (Ward and Lock.) Fcap. 8vo. Cloth. Pp. 138. 3s. 6d.

What Mr. Mackenzie Bell, in his lines to Sir Walter Scott, calls "the unclouded sun of common sense," shines over every poem in this graceful little volume. Its author is not ambitious: here are no complicated measures, no exotic subjects, but the old themes of love and duty, of the beauty of nature, and of patriotism. Indeed, one or two of the poems in the "Pictures of Travel" section are, owing to the very great success with which the details of natural beauty are treated, really notable; while the religious poems breathe an atmosphere of sincerity and of devotion not a little refreshing. It is minor poetry, but it is good minor poetry.

BRETT, THE HON. MRS. *Echoes: a Musical Birthday Book.* (The Leadenhall Press.) Large quarto. Price 12s. 6d.

To have produced something new in the way of a Birthday Book is an achievement; and Mrs. Brett may be congratulated on the three hundred and sixty-five musical gems which she has selected and arranged in this large and handsome volume. Every left-hand page is a blank for two dates; every right-hand page has two pieces of instrumental music printed from clearly engraved plates. The music assigned to one's birthday may be a Largo from Haydn's Sonatas or an old English melody; it may be a Mendelssohn March or a Prelude by Chopin; a chorus from Sullivan's operas or a Lullaby by Barby. The idea is a pretty one, and the only pity seems to be the absence of an index to the whole work.

GOUNOD, CHARLES. *Requiem (Mors et Vita).* (Novello.) Paper Covers. Pp. 110. 2s. 6d.

TAYLOR, FRANKLIN (Editor). *Progressive Studies.* Books XLI. and XLIII. (Novello.) Paper Covers. Pp. 36 and 24. 1s. each.

Two additional volumes to the series of Progressive Studies for the Piano forte. Book XLI. gives studies in repetition and the tremolo, and Book XLIII. studies in part-playing.

WILDE, OSCAR. *Lady Windermere's Fan: a Play about a Good Woman.* (Elkin Mathews and John Lane.) Cloth. Pp. 132. 7s. 6d. net.

The cry for a printed, a literary drama, seems to be bearing good fruit; we have had Mr. Pinero's plays and Mr. H. A. Jones's, and now Mr. Mathews and John Lane announce Mr. Oscar Wilde's dramatic work, which the play now under notice forms the first volume. "Lady Windermere's Fan" was produced at the St. James's Theatre on February 2, 1892, and was the first spoken of more highly for its literary than for its dramatic qualities. Mr. Wilde's books have always appeared in beautiful forms, and this book is certainly no exception: it is delicately bound with beautiful ornament, and within the covers every page is a delight. Indeed, it is a work of art, even apart from its contents. "Lady Windermere's Fan" is now dedicated "to the dear memory of Robert Earl of Lytton, in affectionate admiration."

THEOLOGY AND PHILOSOPHY.

CARPENTER, W. BOYD, D.D., D.C.L. *The Burning Bush and Other Sermons.* (Sampson Low.) Crown 8vo. Pp. 183. 3s. 6d.

The Bishop of Ripon's contribution to the Preachers of the Age. The volume has for frontispiece an excellent colotype portrait.

EXELL, REV. JOSEPH S., M.A. *The Biblical Illustrator: James.* (Nisbet.) 8vo. Cloth. Pp. 514. 7s. 6d.

EXELL, REV. JOSEPH S., M.A. *The Biblical Illustrator: Acts.* Volume III. (Nisbet.) 8vo. Cloth. Pp. 78. 6d.

HALCOMBE, REV. J. J., M.A. *What Think Ye of the Gospels? A Handbook of Gospel Study.* (T. and T. Clark Edinburgh.) 8vo. Cloth. Pp. 128. 3s. 6d.

The Oxford Bible for Teachers. (Clarendon Press, Oxford.)

Several new editions of the Oxford Teachers' Bible have appeared in the past month. The most elegant is that in red limp Turkey morocco. Set in nonpareil instead of minion type, it is a smaller volume than recently issued from the same press. The number of pages is about the same as before, but though the type is smaller it is equally clear and readable. That it should be possible to print a book of a thousand pages, and another four hundred and forty-eight pages of "Helps," in so compact a compass, is a triumph of the printer's art. The "Helps" to the study of the Bible in their revised form constitute in themselves a whole of scholarship, research, and discovery. The sixty-four facsimiles of inscriptions, bas-reliefs, etc., which formed so distinctive a feature of the edition, have now been better classified and increased in number to seventy. We may add that there is another copy in paste grain limp, printed on 16mo, on India paper, at 10s.; and another and still smaller edition in pocket type, containing exactly the same matter. At the same time a new edition of the "Helps to the Study of the Bible" is issued from the same press, and never was a cheaper shilling's worth offered, containing as it does a set of maps, with all the latest discoveries, a very complete concordance, index of proper names, articles on the plants and animals of the Jewish lands, and parties, a harmony of the Gospels, a summary of events in the Bible, facsimiles of manuscripts, pictures from various ancient coins, statues, and the results of the ripest scholarship.

TRAVEL, GEOGRAPHY AND TOPOGRAPHY.

BLENNERHASSET, ROSE, AND LUCY SLEEMAN. *Adventures in Mashonaland by Two Hospital Nurses.* (Macmillan.) Crown 8vo. Cloth. Pp. 340. 8s. 6d. net. With Map.

A thoroughly entertaining work, as readable as any recent book of its sort. At the present moment, too, it has a particular interest, for the authors spent some time in the country about Fort Salisbury and Great Zimbabwe. Mr. Cecil Rhodes, Mr. Selous, and Mr. and Mrs. Theodore are all figured more or less prominently in these pages.

HARRIS, WALTER B., F.R.G.S. *A Journey Through Yemen, and Some General Remarks upon that Country.* (Blackwood.) 8vo. Cloth. Pp. 385. 16s.

An exceedingly interesting volume of travel dealing with a country comparatively new to English readers. Starting from Aden, in order to escape the surveillance of the Turkish authorities, Mr. Harris made his way to Sanaa, and thence to the coast of the Red Sea at Hodaladah. The record of his journey and of his adventures, which a country so unsettled could not but be exciting, makes very interesting reading, particularly to those who are in any way concerned with the state of the power and influence in Asia, valuable reading; and that the book is so admirably illustrated adds greatly to its value. We should add that Mr. Harris supplements his own experiences with a useful epitome of what is known about ancient Nabataea, and that portions of the book have already appeared in the *Illustrated London News* and *Blackwood's Magazine*, and that it contains a very clear map.

NOTICE.—For the convenience of such of our readers as live at a distance from a bookseller, any Book they may have mentioned in the previous List, will be forwarded post free by any part of the United Kingdom, from the Publishing Office of the REVIEW OF REVIEWS, 125, Fleet Street, on receipt of the Order for the published price of the Book ordered.

CHRISTMAS NUMBERS, CHRISTMAS CARDS AND DIARIES.

NOT unnaturally the English edition of the Christmas number of the *Figaro Illustré* (8s. 6d.) is the best to appear this year. Its cover, by M. Flameng, is a triumphant example of what Frenchmen can do in the way of attractive design, while the illustrations by MM. Myrbach, Moreau, and Dubufé, to the stories of MM. Jules Verne, Augustin Filon, and Jules Claretie, have all that delicacy of colouring and cleverness of drawing which we always expect to find in the *Figaro*. We have heard so much of late about M. Jules Claretie in England that to many readers the chief attraction will be the ballet-pantomime, by MM. Armand Silvestre and Francis Thoiné, which he has illustrated with his delightful fancy and suggestive blending of colours. The three plates given with this number are very successful. Of English numbers the *Graphic* (1s.) has the most attractive cover. Designed by Phil May, it depicts a very typical Father Christmas sleighing down a hill watched by the admiring nations. The stories here are contributed by Mr. Baring Gould, Mr. Edwin Lester Arnold, Mr. Eden Phillpotts, Mr. Paul Cushing, and Mr. Bret Harte. The three plates presented with the *Graphic* are good—especially Mr. W. H. Trood's study of dogs. As usual, many of the illustrations here are in colours. Mr. Phil May appears again with some wonderfully effective, humorous drawings, which will rank among the best efforts of the cleverest artist of his school that England has yet produced. Mr. Reginald Cleaver, too, deserves more than passing commendation, while Mr. W. Hatherell, Mr. A. S. Boyd, and Mr. W. Ralston all do good work in their own way. Three pages of Mr. Cleaver's parliamentary sketches are reprinted from the *Daily Graphic* as a supplement: they show an excellent draughtsman at his best. The *Illustrated London News* (1s.) has a seasonable holly-covered wrapper, and its three plates—one a study of an old shepherd and a little child—are effective. As usual, Mr. Shorter has collected a very strong staff of writers. Mr. Rudyard Kipling has an Indian story, forcibly illustrated by Mr. Caton Woodville; Miss Marie Corelli's "Nehemiah P. Hoskins, Artist: A Faithful Study of Fame," looks interesting; Mr. Barry Pain's very short children's story is admirably illustrated by Mr. Gordon Browne, who also provides pictures for Mr. W. E. Norris's "Additional Guest"; Canon Atkinson's fairy story and Mr. George Gissing's "Fleet Footed Hester" both look absorbing. From the literary point of view, this is the strongest of the English Christmas numbers. "Holly Leaves" (1s.), the Christmas number of the *Illustrated Sporting and Dramatic News*, has the usual wrapper and the usual genial, seasonable batch of good stories and illustrations. *Black and White* (1s.) has holly leaves upon its wrapper, too, and naked children who must feel very cold in the snow. Many of its illustrations are coloured, and its plate—a child subject—will prove attractive. Its stories are by Mr. J. Maclaren Cobham, Miss Nesbit, Mr. Barry Pain, Mr. Eden Phillpotts, Mrs. Annie Thomas, Miss Somerville, and Mr. F. C. Phillips, and all look exciting. Here, too, Mr. H. G. Hibbert describes "The Evolutions of a Ballet." The *Sketch* (1s.) has its strong points, but unless one is a very strong admirer of Mr. Dudley Hardy's most mannered work, its pages become rather tedious. However, Mr. Phil May's sketches are so humorous and so artistic that they alone make the number worth getting. Mr. Max Pemberton and Miss Clare Savile-Clarke both contribute good stories. The *Sketch's* wrapper is not attractive, but its contents (including a coloured plate and many coloured pictures) are—very. The *Lady's Pictorial* (1s.) has a plate of average merit, but the long story by Miss Braddon is one of the best pieces of work that she has done. It is called "The Christmas Hirelings," and is illustrated by Mr. F. H. Townsend. Speaking from the strictly artistic point of view the illustrations to the *Lady's Pictorial* are always more interesting than any other pictures of the sort, and we can be sure that in Mr. Townsend's capable hands the tradition is maintained. The *Queen* (1s.) is an enlargement of its number for December 2, in order to save postage. Its chief plate

is fairly successful; the smaller one, photographed from life, is disagreeable. Excellent stories are by "John Strange Winter," Mr. Francis Gribble, and there are the usual number of illustrations, among which we notice with very great pleasure some fantastic decorative designs by Miss R. N. N. Pitman. The Japanese wrapper of the *Queen* is by Mr. Dudley Hardy. The *Gentlewoman* (1s.) is not particularly attractive. Its habit of printing its plate upon silk was but a trick after all, and ill bears constant repetition, and the subject selected this year is vulgar in tone. A long story, illustrated by Mr. Everard Hopkins, "is avowedly written in imitation of the work of one of the most popular writers of the day," and a sum of twenty-one guineas is offered as a prize to the first five who guess correctly the author imitated. Other stories are by Mr. Clement Scott and Mr. Warham St. Leger. The *World* (1s.) is very like to its past numbers; illustrated as usual by Mr. Alfred Bryan, it contains a play and stories by Miss Clo. Graves and others. Its large tinted plate is "A Royal Reverie; or, A Reign Reviewed," and displays the Queen's glance back upon the past. *Vanity Fair* (1s.) has a double weekly number with a large plate by "Spy" of the Terrace of the House of Commons, and contains stories by Mr. H. B. Marriott Watson and others. One of the best Christmas numbers is always *Phil May's Illustrated Winter Annual* (1s.). Here one sees Mr. Phil May at his best—which means that here one has the best and most artistic black and white drawings that London can produce. With Mr. May's prolific pencil covering half the pages, the interest of the letterpress becomes quite subsidiary. Still Mr. Walter Besant, Mr. Clark Russell, Mr. Gilbert Parker, Mr. Hume Nisbet, and Mr. Richard Le Gallienne will help to pass an hour or two very pleasantly. The *Antipodean* (1s.), which Messrs. Chatto and Windus publish for an Australian house, is chiefly remarkable for a beautiful new poem by Mr. Robert Louis Stevenson: "To My Old Familiars," and for a frontispiece which reproduces Mr. Stevenson's latest photograph. The *Detroit Free Press* (6d.) is always welcome: this year it contains short stories by Mr. E. W. Horning and Mr. A. A. Abbott—both admirably illustrated. *Woman* (6d.) deserves to be bought if only for its three admirable stories, by Miss Clare Savile-Clarke, Mrs. Steel, and Miss Blanche Oram (Roma White).

Messrs. Raphael Tuck and Sons send us a very varied and very interesting collection of Christmas cards. Ask for "The Minuet Tablean," the "As Months go by Calendar," and "The Century Calendar," by M. Jacques Inaudi, which will tell you any date from the year 1791 to the year 1920. You should see the "Sacred Series" too. Messrs. C. W. Faulkner and Co., of 41, Jewin Street, publish an excellent and very tasteful selection of cards. Perhaps they are the most artistic now upon the market, and it would be a good idea to send five shillings for a selection. Ask them to include their new race game "Upidee" (1s.). Messrs. Mowbray and Co., of Oxford, publish an Oxford series, which is entirely religious in character. It is worth seeing, for the cards are never garish or vulgar.

As usual Messrs. De La Rue, of Bunhill Row, send a varied batch of almanacs, pocket-books, and diaries. An excellent standing leather case for engagements, a little velvet-covered engagement diary only an inch square, and a very sumptuous and fine-smelling leather pocket-book and diary combined (No. 3544), and two rather daintier pocket-books for lad (4027 and 2602½) are among the most pleasing specialities. Messrs. John Walker and Co., of Farringdon House, Warwi Lane, send their usual batch of "loop-back" diaries and pocket-books combined, to which we are inclined to give the pal for general convenience and handiness. Either No. 197 (8s. 193 (8s.), or 184 (8s.) would make an admirable present for man—the first being long in shape, the next two square. A smaller book for the waistcoat pocket is No. 181 (3s. 6d.).

THE INTERNATIONAL BUREAU OF PHOTOGRAPHY.

ITS ORIGIN, OFFICERS, AND AIMS.

THE International Bureau of Photography is one of the practical results of the World's Congress on Photography, held in Chicago in August last. The Chairman is one of my Helpers, Mr. H. Snowden Ward, who attended the Congress and is enthusiastic as to the possibilities of the Bureau. The British office, which will be the headquarters of the Bureau, is in the Memorial Hall, Farringdon Street, London, E.C., where the following information was supplied.

The Bureau was the direct outcome of a paper by Mr. W. Jerome Harrison, of Birmingham, advocating the formation of a body to secure the preservation, multiplication, and exchange of valuable photographs for the public benefit; but several other papers, urging the importance of various works that will fall within the scope of the Bureau, were read. Amongst these may be mentioned, "A Plea for the State Recognition of Photography," by Dr. John Nicol, editor of the *Photo-Beacon*, part of a paper by M. Léon Vidal, of Paris, and "Photography as an Aid to Education," by Professor Chas. F. Himes.

A COSMOPOLITAN COMMITTEE.

The committee of the Bureau was appointed by the President of the Congress, the Hon. Jas. B. Bradwell, and is fairly cosmopolitan, as will be seen from the following list of the members:—

W. Jerome Harrison, F.G.S., 52, Claremont Road, Handsworth, Birmingham, England.

John Carbutt, Wayne Junction, Philadelphia, U.S.A.

Shapoor N. Bhedwar, Swiss Lodge, Cumballa Hill, Bombay, India.

Leon Vidal, Paris, France.

Professor W. K. Burton, Imperial University, Tokio, Japan.

Mrs. Elizabeth Flint Wade, Buffalo, U.S.A.

Dr. John Nicol, Editor of the *Photo-Beacon*, Tioga Centre, N.Y., U.S.A.

Vice-Chairman:—Gayton A. Douglass, Chicago, U.S.A.

Chairman:—H. Snowden Ward, Memorial Hall, London, E.C.

All these gentlemen are well known in connection with photography, and it is proposed to invite several others to accept seats on the committee. The proposed new members will include one each for Austria, Canada, South Africa, Australia, and New Zealand, and an additional one for the United States.

Unwieldy? Yes, if it were proposed that the committee should work as one body; but in reality each member will be a little executive in himself, taking charge of the work in his own country, and collecting around him those who are prepared to carry out the actual details.

OBJECTS OF THE BUREAU.

Here are the outline objects of the Bureau:—

To carry out the recommendations of a paper submitted to the World's Congress by W. Jerome Harrison, F.G.S., viz., to secure as far as possible—

- The official recognition of photography by the governments (local, as well as central) of civilised nations.
- The establishment of national depositories for the reception and care of photographs, and especially negatives, possessing literary, historic, or scientific value.
- The establishment of an International Bureau for the exchange of prints and other reproductions of negatives

in the national depositories; and to enable colleges, museums, and students to obtain photographic records from every land.

- The appointment of national and local committees and sub-committees for the attainment of the above-mentioned objects.

The first and most practical work of the Bureau must be to arouse people to the necessity of securing indisputable records of those objects of historical interest that are daily passing away. In Britain we shall first make an effort to enlist the photographic societies, nearly three hundred strong, and to induce them to: 1st, undertake a photographic survey of their district; and 2nd, to place themselves at the service of the local antiquarian, historical, literary, and other similar societies, when they wish a photographic record made.

Our next work will be to appeal to the local authorities and to the societies as before named, and many others, to assist the work in various ways. The local free libraries will be asked to provide room for lodgment and display of the prints supplied by the local photographers. In some places this has been done already, as in Birmingham, where several thousands of Warwickshire prints are deposited in the Reference Library, all titled and catalogued, and available for reference under certain restrictions. In Rotherham, the Photographic Society has been asked by the Town Council to occupy one room in the new Free Museum building for a permanent exhibition room, in which to preserve and display the results of a local photographic survey just started.

COMMUNICATIONS ASKED FOR.

The antiquarian, historical, and other societies will be asked to give expert advice to the photographers engaged in the executive work of the survey, for we recognise the fact that if there is not this co-operation the photographers will be liable to record things that are worthless to the specialist, and to miss entirely things that are of the greatest possible value. In architectural work, for instance, there are many cases where the photographer would take a general view, while to the architect, or the antiquary only some special detail, perhaps missing from the general view, would be of any value.

In a leaflet about to be issued we ask for communications from individuals or societies who are willing to co-operate by—

- Supplying prints or negatives from collections at present in their possession.
- Obtaining and supplying negatives or prints of objects in their own neighbourhood that are suggested by the Bureau.
- Supplying lists of objects of interest in their neighbourhood (especially of such as are likely to soon disappear), of which it is desirable that pictorial records should be preserved.
- Accompanying and assisting the actual photographers with advice as to best view-points, details of special interest, etc., in antiquarian, architectural, and other special subjects.
- Providing or working for the provision of suitable print depositories in local Free Libraries, Art Museums, Mechanics' Institutes, etc., or, failing these, depositories for sections of the work in charge of antiquarian, architectural, literary, natural history, and similar societies.
- Subscribing towards the necessary working expenses.

A TOPOGRAPHIC SURVEY.

The Photographic Survey, which is the most immediately practicable part of the work in hand, can be understood from a brief review of what was done by the Birmingham Photographic Society, the first to undertake an extensive survey. A special section of the society was formed of those interested in the survey work, with a small special subscription for the necessary expenses. The six-inch Ordnance Survey map was taken as a basis, and as the district to be covered by the society included thirty of the "quarter sections" of the map, these were hung in the club-room, and members were asked to select the section in which they would work. An eminent local architect and archaeologist drew up notes upon the principal buildings and other objects of which it was advisable to preserve a record, and on this basis the members worked. In this case the negatives remain in the possession of the photographers, and one print from each is contributed to the collection of the Survey. The prints may be of any size, though whole-plate (8½ by 6½) is recommended, but all must be by a permanent process, and all must be mounted on uniform mounts, the smaller sizes being mounted two or four on one mount. The work of the surveyors was not confined to buildings, for it is desired to make the survey fully record the life of the time, and a portrait of a genuine country labourer in his smock-frock, or a group of local magnates "on Change," is acceptable as a record. It will be seen that this is work that can be undertaken by individuals as well as by societies, and it is probable that the work of the Bureau will often be to prevent two or more people working over identical ground.

WORK IN GEOLOGY, METEOROLOGY, ETC.

There is plenty of national and general work that can be undertaken offhand by any single worker, without waiting for any complete organisation, though we suggest that as far as possible it be done in connection with some such society as the British Association, or one of the many scientific and other societies that have the organisation ready to hand. The British Association has already undertaken the work in at least two of its sections. In the Geological section, a committee was appointed in 1889 to collect, preserve, and register photographs of geological interest, and has now several hundreds of photographs in the hands of the sectional secretary, Mr. O. W. Jeffis, 12, Queen's Road, Rock Ferry, Cheshire. In 1890, a Meteorological Committee was formed to collect photographs of clouds, and other meteorological phenomena. More cloud studies have been received than can be used; but rare forms will still be welcome, and photographs of lightning, hoar-frost, rainbows, and some other phenomena are wanted. The secretary is Mr. Arthur W. Clayden, Warleigh, Tulse Hill Park, London, S.W.

But these two small departments do not exhaust the useful applications of photography to the subjects considered by the British Association. In almost every branch of science photographic collections would be of value; and if the scientists and photographers in different parts of the country only organise their efforts, a great deal can be done without a large amount of work falling on any one person. And there are many societies, other than those which are usually called scientific, that might be greatly helped in their work by co-operating with a good photographer. How useful it would be if every agricultural society had a complete set of photographs of the winning cattle, etc.

RECORDING PAGEANTS, FIRES, FLOODS, ETC.

Besides this depicting of what are relatively permanent objects, there is much to be done in the recording of

national pageants, rejoicings, etc., as well as fires, floods, and disasters generally. This branch of work has been largely and successfully taken up by the Brooklyn Academy of Photography, Brooklyn, N.Y. In that society the forces are carefully organised, so that when any great procession or similar event of general interest takes place, posts are assigned to the different workers, and each one is responsible for a certain section. The photographers are all amateurs, and it is a notable fact that at a recent important pageant, of which the New York City authorities published a photographic memento, the Academy's men were so much more successful than the professionals who had been employed to do the work, that many of their negatives were used in the production of the memento. The card of the Brooklyn Academy confers many special privileges that have been granted from time to time by the police and other authorities who recognise the importance of the work. It gives the right to photograph in the public parks and other places where cameras are not usually allowed to be used, and passes its bearer inside the police lines at fires, accidents, etc.

Non-photographic societies can help, for they can make lists of the things that ought to be photographed, and can offer their rooms for storing the collections, and their services in arranging and indexing the prints. They ought not to aim merely at collecting photographs that are in existence, but should specify what are wanted, when it will be the duty of the photographers connected with the Bureau to supply the want.

AN ADJUNCT TO MUSEUMS AND LIBRARIES.

All these sectional and local efforts are to be but parts of a great universal scheme, and if I place the details first, it is only because they are the immediately possible parts of the scheme. When this work is fairly under way it will be time to look for official recognition and the establishment of great national depositories and exchanges for the prints and negatives. Suppose the geological collection of the British Association were fairly complete, and consisted of negatives of all the most interesting geological objects in Great Britain, we might well ask that room should be provided for it at the British Museum or South Kensington. We should ask for safe storage for the negatives, for a place where the prints might be kept and referred to, and for some arrangement whereby sets or smaller numbers of prints might be made from the negatives and supplied at a reasonable rate to free libraries, museums, colleges, etc., throughout the country. When similar collections of photographs dealing with other subjects accumulated, a properly equipped photographic studio and workrooms would naturally become necessary to supply prints and lantern-slides to those who cared to pay for them; and there is no reason why the revenue from the sale of such publications to private persons should not enable extensive free grants to be made to public museums and libraries. Similar efforts in other countries, resulting in similar collections, would enable us to enrich our national depository by means of exchange, until it would be a complete storehouse of every class of physical fact, arranged in the most convenient and accessible form, and recorded by the most easily understood means. Indeed, Monsieur Léon Vidal, who is the French member of the Bureau, has already made great progress in the direction of attaining its objects. He has called a meeting of the whole of the Photographic, Scientific, and Artistic Societies of Paris, from which has been formed a central committee to carry on the work of the Bureau.

CONTENTS OF REVIEWS AND MAGAZINES.

ENGLISH AND AMERICAN.

PROLOGUE.

VICTOR HUGO affronted the incredulous intelligence of his generation by his description of the Devil Fish. No one who has ever read "The Toilers of the Sea," that marvellous prose epic which tells the story of the heroic combat waged unceasingly by man against the brute forces of nature, can ever forget the shudder of horror with which he followed the fortunes of the fight between Gilliatt, the hardy sailor, and the Devil Fish, that nightmare of romance.

"It is impossible," cried the critics. "This spectral phantasm of the deep never existed, could not exist. The Devil Fish, with its eight huge arms, with its four hundred pustules that cut and suck like a cupping glass, this loathly horror of vampire-death lurking in ocean caves to seize the limb and drain the life of the unwary fisherman, is but a monster such as 'the dreamer sees confusedly through the loophole of the night.' It has no other actual existence."

The critics were wrong—as usual. Genius was vindicated by facts, and science verified the monstrosity of romance. The octopus has even been exhibited in museums, and living specimens have been shown in aquariums. But that is only what might have been expected. What was unexpected was the sudden revelation that Victor Hugo's Devil Fish was a prophetic foreshadowing of a hideous monstrosity of our own day, so monstrous and so hideous that even the octopus which seized Gilliatt seems but an innocent plaything. The school of Biblical Commentators, which expended the labour of a lifetime in demonstrating how the strange creatures seen by John in Apocalyptic vision prefigured modern monarchies, empires, and churches, is almost extinct. The prophet Baxter is, I believe, its only surviving representative. But one-hundredth part of the misplaced ingenuity with which that worthy man proves conclusively to his own satisfaction that the Napoleonic dynasty may be discerned as in a glass darkly in the mystic beast of the Revelation would enable us to prove that Victor Hugo when describing the Devil Fish was prophesying the advent of the Liberator Permanent Benefit Building Society.

The famous chapter, "A Monster," in "The Toilers of the Sea," reads, indeed, like a poetic version of the report of the Official Receiver. The Devil Fish, with its eight tentacles extending round a face with two dull glassy eyes, clearly corresponds to the Liberator and its eight affiliated companies. Many an unfortunate shareholder and depositor will recognise the accuracy of this prophetic description:—

It winds round its victim, covering him and enveloping him in its slimy folds. . . . It is a spider in its shape, a chameleon in its rapid changes of hue. When angry it becomes purple. Its most disgusting characteristic is its impalpability. Its slimy folds strangle; its very touch paralyses. It looks like a mass of scorbutic gangrened flesh; it is a hideous picture of loathsome disease. Once fixed you cannot tear it away. It clings closely to its prey. How does it do so? By creating a vacuum. . . . It is a pneumatic machine that attacks you. You are struggling with a void which possesses eight antennæ. No scratches, no bites, but an indescribable suffocation. The terrible wretch grins upon you by a thousand foul mouths. The hydra incorporates itself with the man, and the man with the hydra. You become one and the same. The hideous dream is in your bosom. The Devil Fish draws you into its system. He drags you to him and into him; bound helplessly, glued where you stand, utterly powerless, you are gradually emptied into a loathsome receptacle, which is the monster itself.

How true to life is all this, there is no need to declare. But if further confirmation were wanted we have it in Victor Hugo's remarkable phrase—

"The Devil Fish is a hypocrite."

Hypocrisy was the dominant note of Liberator finance. As the Devil Fish wound one of its tentacles around a rock while it cast the other seven around its victim, so the Liberator anchored itself upon the Nonconformist chapel; and devoured its victims to the slow music of the Doxology.

The Devil Fish attacked one man who escaped, and the romance-reading world shudders at the horrid strife.

The Liberator attacked thousands upon thousands who did not escape, and the great public passes by on the other side, caring but little for the devastation that has been wrought in a thousand homes.

Gilliatt, in Victor Hugo's story, by a rapid flourish of his trusty knife tore off his assailant's head as a man draws a tooth. In England to-day the Liberator is dead, but the evil principle which gave life to it and all its companies lives and thrives and flourishes amongst us.

That principle will have to be tracked to its lair and slain, before the thrifty investor can recover confidence. The extent to which that confidence has been shaken, only those understand who have looked below the surface. Trust between man and man has been scorched up, and no one knows but that in any promising investment there lurks the long death-dealing arm of a new Liberator.

Confidence must be restored if business is to revive and thrift to regain its charm. It is atheism to say that nothing can be done, and that swindling is business and that all business is swindling. A generation that has stamped out bribery and corruption at elections by a single Act of Parliament is not going to sit down helplessly before the *non possumus* of the Stock Exchange.

In the hope that it may incite many to co-operate in a manful attempt to cope with this great malady, I have written out my ideas in this Christmas story of "Two and Two Make Four." Whatever may be their defects, they are the best that I can offer, and if each brings his best the worst will soon be mended.

It is a story, and it does not profess to be a history—although, as is sufficiently evident to the most casual observer, I have built my fiction upon palpably obvious foundations of fact.

Of the *Daily Paper* and the somewhat fantastic vision of what might be in 1900 A.D., that also is romance. Much of it, however, might be converted into realised fact if 100,000 of my readers first ordered the *Daily Paper* into existence, and then paid the cost of a cigarette a day into the Fund of the Fellowship.

A penny a day could save millions a year. But I leave the question of the realisation of this dream with the public.

W. T. STEAD.

HÔTEL DE L'EUROPE, LUCERNE, September 3, 1893.

TWO AND TWO MAKE FOUR.

PART I.—THE CRASH OF THE EMANCIPATOR.

CHAPTER I.

THE UNDERGRADUATE.

DECEMBER frost lay lightly on the leafless trees, and the westering sun was sinking slowly through a cloudless sky, when Dick Grant, looking out of the first-class window of the express, saw the first of the villa outposts which London has thrown out in every direction round her crowded heart. The great city was still twenty miles away, nor could his eye catch even a distant glimpse in the horizon of her domes and towers. But the suburban villa, trim and snug, with its gravelled walks and well-kept grounds, seemed almost as significant of the nearness of the metropolis, as the sentry pacing his round is of the camp which lies hidden in the valley.

Dick's face slightly flushed as he leant back in the cushioned seat and gave himself up to a delicious reverie. He was young—not more than twenty-two at the outside—enthusiastic, with the dreamy fervour of the student and of the idealist. He was the son of a Nonconformist minister, and was in his last year at Oxford. Next year he hoped he would take a first-class—at least, he was assured by those who knew, such an honour was not beyond his grasp; and after he had passed, all life lay before him, not as the barren wilderness of sin, but as the leafy glades of Paradise. The only question with him was, which of the many vistas should he take in order to gain his goal? His only perplexity was a choice between the embarrassment of rival attractions. He was to do something great—something to make the world better than he found it; but what it was exactly he did not know. He contemplated the future with the complacency of one who has always found things go well after exertion, and the very haze with which its distinctness was blurred added to its charm. For him, as for all other youths whose experience has been like his, the unknown, instead of being terrible, was full of a delightful fascination. Why should he be uneasy?

"What does the future hold in it?" he asked himself. "Something good, I know," he would reply, with a smile, and revert to building again his castles in the air: those charming *châteaux* in which the eager idealist finds so necessary a refuge from the grim realities and squalid miseries of actual life.

Dick Grant was more than usually pleased with himself that day. He had just left an admiring circle of friends and fellow students at Oxford, every one of whom believed in him, and was confident that next year he would pull off the double event. He was on his way to Strawberry Hall, where he was to spend Christmas with Mr. J. W. Dodds—Dodds the great builder, whose genius was transforming the squalid village of London into a city of palaces—Dodds, the friend and colleague of Mr. Spencer, M.P., through whose influence Dick fondly dreamed that he would some day enter the House of Commons—that goal of youthful ambition. This Christmas at Croydon, to which he had looked forward so long, was to be the crisis of his destiny. After he had met Mr. Spencer, he would see more clearly which of the many tempting roads that stretched before him

would lead him most surely to the goal of his somewhat indefinite ambition—to do some good in the world, to be somebody, to make mankind a little happier than he found it.

Ah, what was that? Dick paused, and drew a long breath. The train had just swept round a curve, and there far away against the sky-line he saw the towers of Westminster. It was but for a moment; the train hurried on, and he saw no more. But that moment was enough.

The Clock Tower, and the flagless pile of masonry that overtopped it, and looked down in imperious pride even upon the famous Abbey at its base, gave a voice to his ambitions. "It is the centre of the world," he said to himself; "why not of my world?" The question woke up so many pleasing fancies that he hardly noticed the deepening gloom of the wintry night which brooded over Clapham Junction, where he had to change for Streatham.

Even Clapham Junction, that shanty stretched out on a gridiron of rails, failed to dim his exultation, the severest test surely to which young enthusiasm could be subjected. Train after train thundered past with screeching whistle and rattle of wheels, bells rang, heavy-laden porters rushed hither and thither, and in the midst of all the confusion Dick Grant stood on the platform absorbed, feeling an elation as of another world.

DICK GRANT.

"A thousand trains a day," he said to himself, "pass and repass this spot. What a triumph of ordered industry, of centralised administration! And yet it is worked in perfect safety amid snow and fog and the midnight gloom by as common-place a set of mortals as the world holds." For Dick, with his university culture, was apt to look down upon common folk innocent of Latin, Greek, and mathematics, as but the homespun of humanity. He loved them in the abstract, and no doubt would gladly help them. But all the same he looked down upon them from the superior altitude of his university career.

"Portsmouth train!" yelled a porter, ringing his bell, "all for Portsmouth!" as the South-Western train, her lamps glowing bright through the frosty mirk, drew up at the platform. Dick started. For Portsmouth was to him one of the magic words which, like Solomon's carpet, need only to be uttered to transport one far over sea and land. "Portsmouth! all here for Portsmouth," cried the porter. "Are you for Portsmouth, sir?" addressing Grant. But he got no answer, for Grant was already in Portsmouth, the great sea gate of England, watching the mail-clad warships sail forth deep laden with the thunderbolts of the modern Jove, to keep watch and ward for Britain on all the seas of all the world.

The whistle sounded, the train started, when suddenly he was startled from his reverie by a shrill cry of terror. A young girl, of about fourteen, unaware

that the door of the carriage had been left unfastened, leaned against it to catch a last glance of the station. The door swung open, and she clinging to it, screaming, was dragged along the platform. Grant heard the scream; the train was every second increasing its speed. Almost automatically, as the carriage swept past him, he sprang on to the footboard, and grasping the bar with his right hand, caught the terror-stricken girl round the waist with his left arm, and swung her into the carriage. He had only time to see her sink into the arms of a lady, apparently her mother, and to close the door, when the train, now going at nearly full speed, left the platform behind it. He was standing on the footboard. He could hear faintly the shouting of the porters, and saw before him the dark outline of a bridge. He jumped clear of the train, and fell in a maze of signal wires. The ground seemed to leap up at him as he touched it; he rebounded like a ball, and plunged forward as a ricochet. His foot caught in a wire. An agonising pang shot through his ankle. He shrieked, and dropped fainting.

Porters ran up with lanterns, half expecting to see him dead. They found him mixed up in the signal wires, apparently whole, and certainly breathing. His foot had been

badly wrenched, but otherwise there was no trace of injury. The pain of extricating his foot brought him back to consciousness. "Don't! oh, don't, I can't bear it!" he shrieked as the rough fellows were getting him out. "Then wot for did you go and do it, you bloomin' fool?" said one of the men. "Shut up, Jim," said the other, "don't you see the gerrman's hurt?"

Dick was carried to the platform amid the little crowd that always gathers hungry for a sensation. A doctor was sent for, and he pronounced it nothing more than a sprained ankle. He bandaged it and prescribed rest for a week. "Get home as soon as possible," said he, "and lie up till the New Year." Poor Dick! he could not go home. Home was in South Wales. His nearest friend was Mr. Dodds, at Strawberry Hall. But how could he go there, crippled and helpless? And yet it was the best thing he could do. The pain was not so acute now, but he had lost the train he was expected by. A telegram would explain everything, and the carriage would meet the next train.

He sent off the telegram, and lay waiting. He was a bit bewildered. Why had this happened? What was that

girl to him, that he should have risked his life to save her? That was the porter's business, not his! What thanks had he got to salve the excruciating pain of his ankle? He would have been at Streatham by now, if he only had done as the others had done, and let her take the

consequences of her own carelessness. And now, what a sudden transformation! His Christmas dream had vanished, and he lay a helpless cripple, a heavy imposition upon the good nature of his host. These were only the natural grumblings of Dick's sprained ankle. He would have considered himself a brute if he had not made that spring. "And then what a face that mother had! She was Juno herself. It was something to have saved that woman's child."

"Clapham Junction! Clapham Junction!" cried the porter, as a heavily crowded train lumbered up into the station. The words gave a turn to his thoughts. "Clapham! Clapham! What does that remind me of? Ah, yes! Wilberforce and Macaulay—heroes who made history. They did not grudge a sprained ankle when they saw their duty. Neither would Dodds nor Spencer, who seem to be the heirs of the piety and philanthropy of the Clapham sect."

And the young man nerved himself up by thinking of the famous Evangelicals, past, present, and to come, so that when the train came for Streatham he was able to take his seat without much difficulty.

As he leaned against the window, trying to catch glimpses of the wilderness of streets, and crescents, and mazy roads,

THE TOWERS OF WESTMINSTER.

DICK SPRANG ON TO THE FOOTBOARD, AND CAUGHT THE TERROR-STRICKEN GIRL BOUND THE WAIST.

villa-lined and gas-lit, he fell a-musing how odd it was that different suburbs of London acquired special sanctity at different times. "Clapham," he mused, "Clapham at the beginning of the century was the Mecca of evangelical philanthropy. But to-day the glory as of the Shekinah has passed to Croydon. Clapham assailed the slave trade—that open sore of the world. Croydon, as befits the more practical philanthropy of our day, seeks to heal the great cancerous malady of slumdom that preys upon the very vitals of society. Wilberforce and Macaulay sought to liberate the slave in distant colonies. Spencer and Dodds and Corns are engaged in the nobler task of redeeming humanity at home. To regenerate our own people by the heroic virtues of temperance and economy, and to enable them to build their own homes in which they can rear the citizens of the future—that is a task even nobler than the liberating of Quashee and Uncle Tom. Croydon has not yet produced its Lord Macaulay. I wonder," and the pale face flushed once more, "if I——"

"Streatham, sir!" said the guard. In another minute he was limping across the platform to the carriage from Strawberry Hall.

CHAPTER II.

STRAWBERRY HALL.

STRAWBERRY HALL, Streatham, with many acres of pleasure ground attached thereto, was given to Mr. J. W. Dodds, at one time Mayor of Croydon, by the great firm of which he was head, as part of the consideration for the business and its liabilities. It is a lordly pleasure-house, the amenities of which must often have been remembered ruefully by its former owner as he picked his daily quantum of oakum or did his daily round of treadmill in Her Majesty's prison at Holloway, from which he has now been transferred to one of the establishments reserved for long term convicts. But although the grim shadow of the gaol was never absent from the mind of Dodds, no suspicion of any such horrid eventuality ever darkened the mind of Dick Grant as he was being driven rapidly in Mr. Dodds's carriage to Mr. Dodds's mansion.

It was Christmas Eve, 1891, and the revelations of the next two years were hidden from every eye—even from those of the watchful auditors, and the vigilant Dr. Lawson Corns. When the carriage with the crippled undergraduate drove up the gravelled drive to the entrance of Strawberry Hall, Dick felt a certain soothing, complacent sense of security that stole upon him and comforted him.

There is an invincible presumption in the minds of most unsophisticated people that every man outside gaol is no thief, and the spectacle of affluence carries with it an informal certificate, not merely of virtue, but of superior virtue. Honest men who are comfortable themselves, to whom the social system has done well, not unnaturally conclude that those to whom it has done even better must be not only as honest, but even more deserving than themselves.

The windows of Strawberry Hall were bright with a blaze of lights, and there was a rush of warm air from the hall when the door swung open, which was very grateful to the chilled traveller. Still more grateful was the hearty welcome that awaited him from the genial burly host, who, with his wife, came to the door to greet him.

"Bless the boy," said Mr. Dodds, "what have you been after?—spraining your ankle just at Christmas time, worse luck? But never mind, never mind, there is room enough

"BLESS THE BOY," SAID MR. DODDS, "WHAT HAVE YOU BEEN AFTER?—SPRAINING YOUR ANKLE JUST AT CHRISTMAS TIME?"

in Strawberry Hall for invalids as well as for merry-makers. Dolly, my dear, this is Mr. Richard Grant, the son of the gifted and saintly pastor of Larniff."

Mrs. Dodds smiled kindly, and helped her guest to a settee in the hall. "Better rest there a moment, and I will get you a glass of wine—or beef-tea," she added kindly, not knowing how Mr. Grant's son might regard the proffer of intoxicants.

"Thank you," said he faintly. "I think the beef-tea would do me most good, if it would be no trouble."

"Trouble! Nonsense, Dick!" said Mr. Dodds. "You shall have it in a moment, and meantime, Dolly dear, tell James to see to the fire in Mr. Grant's room. We shall have the doctor at once, and let him see to your foot."

As the good-natured pair bustled about, Dick, in the midst of his gratitude, felt somewhat sad. Mr. Dodds had aged considerably since he had seen him, and the wrinkles in his usually cheery face seemed to be engraved more deeply than he expected.

"Are you well, sir?" he asked somewhat nervously.

Mr. Dodds started slightly. "Well, sir!" he said sharply. "Well! I never was better in my life. Don't I look well?"

"Oh, certainly," said Dick, "quite well. I was only afraid—afraid I was troubling you," he blurted out at last, and subsided into silence.

After Dick had had his beef-tea he was supported up the stairs by two footmen, whose steps were inaudible upon the thick piled carpets. He was lodged in a chamber furnished from floor to ceiling regardless of expense. A ruddy glow from the fireplace filled the room with a cheery sense of warmth. A luxurious couch—at the head of which stood a lamp whose opal shade diffused a mellow light by which he could, if he were minded, read with ease and comfort—invited him to rest. He glanced round at the choice pictures on the walls; at the well-filled bookcase, and at the table, on which stood a lovely basin of hothouse flowers among the

papers and magazines. From the room a door led to a bedroom with bathroom attached.

Dick lay down on the couch as soon as the servants left him. The pain in his ankle was increasing, otherwise he would have slept. A delightfully restful feeling pervaded the atmosphere. All was quiet save the occasional sputter of the yule log on the hearth, and in a distant recess the slow ticking of an antique clock.

Then he bethought him that he had better send word home. He would telegraph after the doctor had seen his ankle. Meantime he would write his mother a brief note. Ink and pens and all things needful stood close to his hand. Raising himself with some difficulty he wrote:—

STRAWBERRY HALL,
Christmas Eve.

My Dearest Mother,—A very happy Christmas to you and to all the dear ones at home! It is my one regret that I am here alone, instead of having all of you enjoying this pleasant place. Mr. Dodds was kindness itself, and introduced me to his wife as the son of the gifted and saintly pastor of Larniff. Don't forget to tell father that he is known and esteemed in the great city. Mr. Dodds is like a prince in Israel, and he dwells in princely style. I forwarded you a few Christmas presents before I left Oxford, and I am eagerly expecting your letters to-morrow. How glad I was when Mr. Dodds welcomed me to his beautiful house that I had such a father and that our denomination can boast such a pillar of strength as this great and good man. I have as yet heard nothing about the Emancipator. But the evidence of wealth on every hand is so great, I am sure Aunt Sarah could not do better than deposit her £500 with this most philanthropic enterprise. I will however write more fully after I have had a talk with Mr. Dodds.

With dearest love and best Christmas wishes to all,
Believe me, dearest Mother,

Your affectionate Son,—DICK.

P.S.—I almost forgot to tell you that in helping a girl out of danger at Clapham Junction I tripped over a signal wire and slightly sprained my ankle. It is a mere nothing, and did not interrupt my journey. They insist I shall stay here till the New Year.

He read the letter over before fastening it up, and then feeling tired, fell into a doze which lasted until the arrival of the doctor. His verdict was reassuring. The ankle was going on all right; nothing but rest was needed. He had better not go downstairs that night. But he might venture down on Christmas Day.

He dined alone, but after dinner Mr. Dodds came upstairs to see how his young friend was. As he opened the door the sound of jocund voices came in from downstairs. There was the bird-like laughter as of young things and the merry sound of Christmas glee. "Young folks," said his host, "will be young folks. We have several of my daughter's friends from our church to-night, and they are having an old-fashioned Christmas romp. What a pity you cannot be there!"

"I fear I should only be a spoil-sport with this ankle," said he, somewhat lugubriously. "But don't let me keep you here. That would be too bad."

"Not at all," said Mr. Dodds genially. "I would like a quiet chat. I am getting up in years, and the youngsters are sometimes too noisy for me."

Dick, who had dined more heartily than was altogether wise considering the risk of inflammation, was delighted. His host inquired minutely about the accident, and by a series of searching questions succeeded in ascertaining exactly what happened.

"You are quite a hero, Dick," he said at last. "Just fancy your saving a young lady from a horrible death at risk of your own life, and never to think anything of it. Have you no idea who it was?"

"Not the least. They were in a first-class carriage—mother, daughter, and, I think, a gentleman; but I could not see distinctly. It was all over in a moment. What struck me most was the wonderful beauty of the mother."

"Wonderfully beautiful, was she? Where was the train going?" asked Dodds, somewhat sharply.

"To Portsmouth," said Dick, with some surprise.

"Had the lady dark hair or light?"

"Dark, I think," said Dick. "Why do you ask?"

"How old was the girl?" continued Dodds, not heeding Dick's question.

"About fourteen, with long fair hair."

Mr. Dodds remained silent for a time. Then he went to the book-shelves and produced "Debrett." He turned over its pages to some name he seemed in search of. When he had found it he looked up. "I think I know who they are. We shall see—we shall see. But do not ask me till I am quite sure. If I am right, you are in luck, my boy, you are indeed."

Dick said nothing, but wondered what Mr. Dodds meant. Presently Dodds looked up and said pleasantly, "And you, Dick; what are you going to make of yourself after you leave Oxford?"

Dick sighed. "I was hoping to get light upon that subject this Christmas, Mr. Dodds, but at present—"

"Tut! tut! nonsense, boy—who knows but this accident may have been providential. If not a sparrow falls to the ground without His knowledge, do you think you could fall without a reason? The accident may be the making of your fortune. Remember that dear old hymn we sing so often—

‘God moves in a mysterious way,
His wonders to perform.’

"The fact is," said Mr. Dodds, with a little jerk, "I was discussing the question about your future with Mr. Spencer only this very day."

"Really," said Dick, flushing with pride; "I did not imagine Mr. Spencer even knew I existed!"

"Mr. Spencer knows everything," said Mr. Dodds impressively. "There is not a single smart young man who is now coming out at the Universities upon whom he has not his eye. He spotted you long ago. You will find your way already laid out for you by that marvellous man. He is coming to-morrow, by-the-bye, expressly in order to see you."

"You know Mr. Spencer well I think?" said Dick.

"Know him! I should think I do!" said Dodds enthusiastically. "He is the man of the situation. Talk about your Napoleons. Jabez Spencer is the Nonconformist Napoleon of Philanthropy and Finance. Lucky for you, my boy, if you can put your fortunes under his care. You are a made man if you do. A made man."

"They say," said Dick half to himself, "that he is to be a member of the next Ministry!"

"I should think so," said Mr. Dodds emphatically, "and a Cabinet Minister. Mark that. I should not wonder if he were Prime Minister before he dies. With his genius and the solid support of the Nonconformist middle classes, there is no saying where he may not arrive. By the way, I hope the wind may be in the right quarter, because if it is you may be able to hear the Christmas chimes played on the bells which Mr. Spencer gave to the Croydon Congregational Church. Fine bells—splendid bells! Some day I hope to give a similar peal to our Baptist Church when it can build a belfry. Seven bells—seven fine bells. One bell for each letter in Spencer's name. How they ring the good people to worship God morning and evening! S P E N C E R, S P E N C E R! What

THE CROYDON CONGREGATIONAL CHURCH.

music there is in their chime! And all made out of the Emancipator profits. Wonderful man, wonderful man, Jabez Spencer! Now good-night, good-night!"

And Dick Grant was alone with his thoughts; alone to dream over the coming realisation of his ideals. Mr. Spencer then knew of him; had his eye on him; was coming to see him. Mr. Spencer, who was going to be Cabinet Minister; perhaps Prime Minister some day. In his brightest dreams he had not ventured to hope for so much good fortune.

He thought he would sit up till Christmas Eve died into Christmas morn. He wanted to hear Mr. Spencer's bells. But it was not yet eleven o'clock, and he felt faint and drowsy. He struggled against it for a time, but at last gave in. "Perhaps the wind is the wrong way, and I cannot hear them. Better sleep and be well to see him to-morrow."

And Dick turned in and slept; and all night through he heard the bells mingling with the angels' song. "Peace and goodwill to men," sang the waits outside. "Peace and goodwill, peace and goodwill," pealed Mr. Spencer's bells, until at last he sank into so deep a sleep that even the echoes of his waking thoughts died away in the stillness and were at rest.

CHAPTER III.

SCOUNDRELS THREE.

WHEN Mr. Dodds left Dick to dream vain dreams of gratified ambition, he bade his guests good-night, and betook himself to his own private room.

A telegram unopened was lying on the table. He eyed it for a time as the mouse glances furtively at the snake, and hesitated to open it. "Pshaw," he exclaimed at last, "this is cowardly!" and taking the telegram he tore it open.

But as he did so, his fingers faltered. Telegrams to him had evidently for many a long day been the heralds of evil tidings.

And the present was no exception to the rule. As he read it, his brow contracted and his features assumed the painful expression, the traces of which had attracted Dick Grant's attention when Dodds met him at the door of Strawberry Hall.

Then he sat down, rested his feet upon the fender, and gazed into the embers a long time in silence. Apparently the pictures in the fire afforded him little consolation, for after a while he got up and began walking about the room.

"Merry Christmas, indeed! Merry Christmas! And yet I am not altogether sorry the game is up at last. The suspense was worse than the catastrophe. And yet I am sorry for the wife"—and a big lump came into his throat—"and the children. If only I could save them. But there is no way; no, not even suicide. All would come out—everything, everything! That which is done in the closet, proclaimed upon the housetops; and what is worse than the housetops, in the daily papers. And this, instead of being postponed to the Day of Judgment, to come in the New Year! It is too bad, too bad."

Something apparently turned his thoughts in a new direction. "What a lucky chance it was that sent Dick Grant here to-night! I shall at least have something to tell Spencer to-morrow. If only we could use this to get both of Mr. Nestor. It might at least tide us over another year, and in that year who knows what might turn up? I might die, for instance."

And the wretched man, obliged to disguise his wretchedness even from his wife, a young girl he had recently married, went off to bed. To bed, but not to sleep. For he could not escape from the memory of that telegram, innocent apparently in its wording, which told him only too distinctly in its cypher that even Spencer, the Napoleon of Philanthropy and Finance, was at his wits' end, and that by no possibility could the crash be postponed for another twelve months.

Next morning at breakfast his wife noticed the haggard face, which even his resolute will failed to conceal. "It's nothing," he said, in reply to her inquiries—"nothing. Only the carol-singers disturbed me. Really they might have mercy upon an overdriven man of business. I don't think I got a wink of sleep. I shall be all right if I take a turn or two in this nipping frost. But first I must go and see how our invalid is getting on. Quite a hero he is, my dear. Saved the daughter of Lady Sidney Nestor from death at Clapham Junction—that is how he met his accident, and never a word would he say about it till I wormed it out of him. Good fellow too; make his mark some day, I am sure."

Mr. Dodds found Dick in capital spirits. He had slept well, and was impatient to come downstairs. "Not till after lunch," said Dodds. "You must rest all the morning. We shall drive over to service in the church—our church, you know," he added. "You know the old joke that a carriage and pair will never find their way for many years to a Dissenting chapel. My horses have not yet forgotten the old road, and I don't forget the pit from which I was digged. Baptist I was born, and Baptist will I die, a humble and unworthy member of the denomination which has given to the world such bright and shining lights as Carey and Spurgeon." So saying, he slipped away, and presently sent upstairs to Dick a bundle of letters from home. With these we have no concern with the exception of one extract from his mother: It ran thus:—

"Aunt Sarah has been rather anxious to hear from you. You know that most of our people have deposited their savings in the Emancipator, Mr. Jeremy, the agent here,

being a very zealous and godly man, and diligent in his business. Your aunt, however, is somewhat suspicious of building societies. She has withdrawn her little fortune, a sum of about £500, from the local societies, and is now very uneasy, fearing she may be robbed, and yet not knowing where to invest it safely. She asked father, and he told her that he knew nothing about finance, but that he believed the Emancipator was as sound as the Bank of England, having had assurances to that effect direct from Mr. Dodds himself. But as you were staying with Mr. Dodds this Christmas, he would ask you to make special inquiries and report, so that aunt might not be misled in the investment of the money upon which she is relying for maintenance in her old age. As soon as we get your report, she will hand the money over to the Emancipator."

Dick hardly noticed the subject. "Oh, my letter will answer that. The Emancipator is all right," he said to himself. "You cannot be in this house and doubt it. But I will speak to Mr. Dodds about it when I get a chance."

And then he fell into a pleasing reverie of the millennial kind. The Emancipator gradually grew and grew in his imagination, until it became as the mustard-tree in the parable, whose branches covered the whole earth. Under its shelter Slumdom disappeared, and a myriad homes owned by thrifty and industrious artisans covered the land. Mr. Spencer became first Postmaster-General, and then Prime Minister, while Dick modestly pictured to himself as serving at first as private secretary, and afterwards as—Who knows but that where the chief rose the secretary might follow?

"I have at least as good a start in life as Spencer had. I have a better education, I have more influential friends. The only thing against me is my name—Jabez was a good name. Jabez Bunting, Jabez Burns, Jabez Spencer—there is something that inspires confidence in the very sound. However, I must e'en do the best I can as plain Dick Grant."

The doctor came shortly after eleven and forbade his removal downstairs till dinner-time, at which Dick greatly chafed. But Mr. Dodds, who had his own reasons for keeping Dick upstairs, was peremptory—the doctor's orders must be obeyed.

Mr. Dodds went to church as was his wont: it was necessary, he said, to set a good example, even although it might be personally inconvenient. So his body sat in church for the edification of his neighbours and the maintenance of its owner's reputation for sanctity, while his mind wandered to and fro between one and another of the various firms of the Spencer group—seeking rest and finding none, but finding only cumulative evidence of impending ruin.

Luncheon passed off grimly enough. "Father had a headache," and there was silence and gloom, where those who knew nothing might have expected to find jollity and mirth. After dinner Mr. Spencer was to arrive, and Mr. Speight.

"It is too bad," said Mrs. Dodds, "for your business men to thrust even Christmas on one side with your business. I am sure the shareholders of the Emancipator get a good enough dividend without your spoiling Christmas to try to increase it."

Dodds kissed her and said that she did not understand; he would get rid of them as soon as possible, but he must see them. "Business is business, you know," he said, and the wife, as most wives do, bowed submissively before that oracular dictum.

When Mr. Spencer came he found Dodds in a state of no

"WE ARE IN QUEER STREET IF THERE SHOULD BE A RUN."

small nervous trepidation. As for Spencer himself, he was as cool as a cucumber; so also, when he arrived, was Mr. Speight, head of the firm of Speight, Bonne, and Co., the solicitor to all the Emancipator companies.

"Cheer up, man!" said Spencer to the disconsolate Dodds.

"I never saw such a chicken as you."

"Play the game to the end," said Mr. Speight, cheerily, "and make the most of it while it lasts. We cannot throw up our cards merely because we are once more in a tight place."

"Tight place," groaned Dodds. "But this is no ordinary tight place. It's all up."

"Possibly," said Spencer, coolly; "but it is no more 'all up' with us than it has been with you over and over again during the last seven years. You would have been bankrupt in 1885 if we had not made you into a company. Don't forget that, Dodds."

"Well," said Dodds desperately; "but it gets worse as it gets on. We get deeper and deeper into the mud, and how we are ever going to get out I cannot see."

"It would beat a cleverer man than you to see that," sneered Speight. "We can never get out. It is only a question of how long we can keep struggling along. We are used to it now. You have been virtually bankrupt since 1885. That has not prevented you making a very pretty thing out of it up till the present, and why should you think it is going to stop now?"

"But the working expenses of the Emancipator are £30,000 a year, and we have nearly £150,000 to pay next year for interest, let alone the heavy withdrawals. And where is the money to come from?" asked Dodds.

"Where all the rest has come from—from the dear credulous British public," replied Spencer. "How much do you think they trusted us with last year? No less than £653,000. There's more to be got where that came from."

"There is only one thing to fear," said Speight, "and that is a run of heavy withdrawals. There is a feeling in the air that building societies are not so safe as they were. The Portsea failure did us harm. But if we bluff hard enough and cant loud enough we shall rope them all in."

"I think," said Dodds deprecatingly, "you might spare our feelings a little, and that reference to canting—"

"Oh, no offence, no offence," said Speight pleasantly;

"didn't mean you, of course. Oh no, I only meant that it was a mistake to discontinue the pious exercises with which we used to serve up our directors' meetings. We really must look up Lawson Corns again."

"Come, come," said Spencer, "such jesting is not seemly. The question is, what is to be done? We are in Queer Street if there should be a run, and a run there will undoubtedly be unless we can check it by a bold move. My notion is that we should issue a more than usually prosperous balance-sheet and raise the interest on fully paid up shares from 4 to 5 per cent."

Dodds gasped. "Raise the interest!" he said. "Why, we had to borrow money to pay last year's dividend."

"Yes," said Speight, "so we had, and beastly dear it was. Cost us as much as 22 per cent. for some of it. But we got it, and never speak ill of a bridge that carries you over, that is my motto."

"But," objected Dodds, "how do the figures stand—the real figures, I mean?"

"Better not ask," said Spencer with a laugh; "they would spoil your digestion for your Christmas dinner. Why can't you rest satisfied with the assurances which sufficed to bring £650,000 out of the pockets of the hard-headed, cautious, practical British investor?"

"Yes," chimed in Speight. "What can you want more than our duly audited accounts, and the noble array of our president and directors? With a real live viscount as president, and Mr. Henry Broadhurst as arbitrator, what more can you desire? The Emancipator, believe me, is as safe as the bank—the Omnibus Bank, I mean."

"Oh, by the bye," said Dodds, brightening up—"talking of viscounts, I think we may at last be able to do something with Lady Sidney Nestor. You know how often we have tried to get hold of Nestor—Nestor, the millionaire—to help us in the development of our Bembridge estate! They have their seat in the New Forest, and if they could but be got to——"

"Idiot," said Spencer, losing patience. "Have we not known all that years and years?"

"Wait a little," said Dodds, "and you will see I am not such an idiot as you think. A young fellow—Oxford undergrad—clever, they say, son of Baptist preacher in South Wales, saved Lady Sidney's daughter from death last night at Clapham Junction. He is now in this house. Innocent as a baby, never dreams of making any use of his adventure. Now is our chance. Do you twig?" Dodds was speaking rapidly, expectorating his sentences by jerks, in a manner unusual to him.

"No," said Spencer, drily, "I don't twig anything, except——"

"Listen, then," said Dodds, proud of a brilliant idea. "What is there to hinder us from exploiting this incident, in which," he said solemnly, "I really see the finger of Providence?"

"Hum," said Speight, with a wicked smile.

"Well, well," said Dodds, "we will let Providence alone just now. But if you, Mr. Spencer, could make this young fellow your private secretary, who knows but that we might rope in Mr. Nestor through his wife, you see? He could hardly refuse the man who saved his only daughter's life; and the office would be honorary, purely honorary, you know—Patron or Hon. President—cost him nothing, either in time or money, and—and—why, it would be worth a cool million to us."

"Pon my word, Dodds," said Spencer, "you are improving. There may be something in that. Where is the young fellow? By the way, what is it you call him?"

"Richard Grant," replied Dodds, "but mind, he is an innocent."

"Trust me to deal with him," said Spencer. "Does he know Lady Sidney?"

"He has not even heard her name," said Dodds, "and on no account must it be mentioned to him. Indeed, I am not altogether certain that it was Lady Sidney——"

"Then how the devil——" interrupted Spencer.

"Mr. Spencer," said Dodds severely, "such profanity is much to be deprecated. Forgive me," he added, sheepishly, "but I cannot bear to hear such words. Old associations are still strong with me."

"But, seriously, what do you mean to do if you are not certain it was Lady Sidney? And if it is she, and this Grant is not to know, how can anything be done?"

Here Speight intervened. "I think I see daylight. It is not always necessary a man should sign his own name—eh, Dodds?"

"Certainly not," said Dodds, "especially when there is no intent to deceive."

"Oh, I see," said Spencer. "I do not like that business. For myself I draw the line at forgery."

"We are less particular," said Speight, "especially when there is no intent to defraud. In this case we defraud nobody, and only seek to benefit the shareholders and depositors in the greatest Permanent Benefit Building Society of all time."

"All right then," said Spencer, "I will go upstairs to see him presently. Meanwhile, Bluff is the word all round. Nothing could save us if once it got wind we were shaky."

After a little more conversation of too technical a nature to be interesting to the reader, Speight departed, and Spencer and Dodds went upstairs to see Dick, who was impatiently awaiting their coming.

CHAPTER IV.

JABEZ THE WIZARD.

JABEZ SPENCER is one of the most unpleasant but most prominent products of the end of the nineteenth century. To look at his broad fleshy face you would never dream that such a mask hid so vulpine an instinct. For Jabez the Wizard of Philanthropic Finance, was a genius in his way. He was as pitiless as the wolf in the pursuit of his victim. Men of his class are not uncommon. They are the parasites of an industrial age. Often they are Jews; but in this case he was a Gentile. The difference of nationality and creed does not matter; the evil thing itself is the same. The company promoter, the astute financier, often differs more in name than in essence from the three-card man or the proprietor of the thimble and the peach of the country fair. The widow and the orphan form his peculiar province. He battens on the silly lambs and weaklings of the community. Every now and then he is found out, and then the pistol announces his exit. In the Emancipator crash some men have gone mad, others have gone to gaol, and one, the leader of them, has gone abroad, leaving behind him no address; but none have committed suicide. The fate of Barker and of Hume Webster is too recent to be forgotten. To play the great game of highwaymen of finance these men need imperturbable nerves, hearts of iron, and no conscience. As stony-hearted as the gamester, they let in their nearest and dearest friends and relatives.

But of all the specimens of this evil genus, Jabez Spencer occupies a position of bad pre-eminence. At the speculators who gamble in high finance we shrug our shoulders, as we shrug them when men mention the professional sharper who haunts the gaming hell. They play with their mates; it is a case of diamond cutting diamond. But with Spencer the case was different. He conspired

to rob the poor. He laid his plans to despoil the widow and the orphan. With odious professions of piety in his mouth he plundered the weak, the distressed, and those who had no helper and no counsellor. The pirate who erased "Thou shalt not steal" from the Decalogue before he hung the Ten Commandments up in his cabin, was a fool compared with Jabez. For if Jabez had been in his place he would have painted "Thou shalt not steal" in capital letters all round the outside of his ship, to disarm the suspicion of those whom he meant to rob.

Jabez was a thief, and an impenitent thief, whose proper place was the treadmill. But Jabez being a clever man, with a magnetic personality and a genius for mystification, stole millions of pounds, whereas the ordinary thief is often sorely put to it to steal a few shillings. The very magnitude of his thefts dazzled the eyes of the plundered; and so the thief of millions escapes scot free, where the thief of pence goes to gaol. Yet even those who most suffered by his rogueries could hardly repress a feeling of admiration for the amazing dexterity with which the robbery was accomplished.

Think of it for a moment. Here is a man comparatively unknown, without education, without influence, with nothing but his shrewd, predatory genius to help him, let loose upon society. Now society, whatever tricks it may play with the honour of men and the virtue of women, is nevertheless exceedingly vigilant over its savings. Nevertheless, by the gift of his own native wicked wit, this man in the course of about a dozen years succeeded in persuading hard-headed, practical, business-like Englishmen to part with seven millions of their hard-earned gold, without any security whatever beyond his own worthless word. Seven millions sterling advanced to a rogue on his promise to pay only four or five per cent. Of that seven millions, nearly five are hopelessly muddled away.

Had one-tenth part of the fuss idly raised about the Salvation Army been employed in overhauling the position of the Emancipator, what millions might have been saved! But puzzleheaded John Bull is always hunting the wrong fox, with the inevitable results.

In this story I do not wish for a moment to suggest that anything actually happened exactly as I have set it down here. The tale is purely imaginary, and is told solely for the purpose of explaining the kind of work that went on constantly in the last twelve years of the Emancipator's life. Of one thing only our readers may be confident. I have exaggerated nothing. The report of the Official Receiver and the proceedings in Court are sufficient warrant to prove up to the hilt every statement made in these pages as to the methods of Spencerian finance. If the real facts could but be set out in the same form, they would throw my poor story far into the shade. But unfortunately it is impossible to publish the real facts with the real names. Two of the leading actors are in gaol. Their chief is in exile. Others who might speak prefer to keep silence. So we are left to describe the dealings of Jabez the Wizard with his victims from imagination, hoping that the time may come when the whole truth may be set forth with fulness of dramatic detail.*

Jabez, accompanied by Dodds, lost no time in making his way upstairs to see Dick Grant. Dick could with difficulty be prevented from rising to greet Mr. Spencer.

"Won't hear of it!" said that great man, genially. "What an idea! Lie still and get better, and the sooner the better. I am delighted to see you. Have heard of you so often, you know. Quite proud to think that you will reflect honour upon Nonconformity."

* Here let me express my indebtedness to the admirable *Westminster Extra*, "Philanthropic Finance," compiled with a care and industry deserving of all praise.

Dick was elated at the compliments, and his flattered vanity hushed the protests of his instinct which recoiled before the vulgar fleshiness of the Spencerian physiognomy. This was a satyr in place of Hyperion, no doubt. "But after all," he said to himself, "appearances are deceitful. Is not this the great Jabez Spencer of the Emancipator?" and soon his nimble mind, searching in the chambers of memory, found ample precedent to excuse the disappointing contour of his hero's face. The soul of Socrates was concealed as by the mask of a satyr. Darwin's face suggested the origin of species, and as for Roman Emperors, many of the men who have ruled the world had worse faces than Jabez Spencer's.

"I have been talking to Dodds," Spencer went on, "about you, and he agrees with me that you are the very man I want for a private secretary—the very man."

Dick's eyes glistened. "I should like it of all things," he said; "but I have not yet left Oxford, and I must take my degree before I leave."

"Of course you must," replied Spencer. "Why not? What has that got to do with it?"

"Oh, I feared that you might want me at once," said Dick.

"And so I do want you at once," said Spencer, gaily. "I appoint you this very minute. But," he added, seeing how the youth's face fell, "don't be alarmed. You are appointed now, but you will not begin your duty until you have taken your degree."

Dick was so confused by this unexpected offer that he could hardly murmur his thanks. What a delightful vista of assured prosperity this suddenly opened up before him! He had hardly ventured to dream of it, and lo! here was the real Mr. Spencer actually appointing him his real private secretary this very blessed Christmas Day. How delighted they would be at home! what a radiant joy the good news would bring to the Manse at Larniff! His heart warmed within him at the thought, and he could almost have fallen on his knees and thanked God and Mr. Spencer.

Seeing his embarrassment, and not quite divining its cause, Spencer began talking to him about the Emancipator.

"Do you know," he said artlessly, "I am very proud of the Emancipator. It is the greatest triumph of my life to have created that gigantic Permanent Benefit Building Society. There is nothing like it in the history of philanthropic finance. It is a masterpiece of constructive ingenuity—as sound as Eddystone Lighthouse."

"To what, sir," said Dick diffidently, "do you attribute its phenomenal success?"

Spencer paused. Then he said impressively, "To the blessing of God. Your good father, I am sure, must have taught you that except the Lord build the house, they labour in vain that build it. Ah, my young friend, the blessing of the Lord maketh rich, and addeth no sorrow therewith."

Dick felt chilled by this implied rebuké, and made no reply.

Then Spencer went on. "After the blessing of God, I attribute our success to the care we have always taken to have the management vested in the hands of good men—men of God. Look over the list of our officers, and you will see that they are all men of good life and the highest character. Here is our friend, Mr. Dodds, for instance, a leader among the Baptists."

Dodds made a deprecatory interruption, which Spencer silenced. "I myself am a Congregationalist. Then there is the Rev. Dr. Lawson Corns. I need not tell you who he is; his very name is sufficient guarantee for the whole temperance world. Mr. Dibley is another good man; and so is Mr. Broadhurst, who is one of our arbitrators. You could not have a better Methodist unless you got Price

Hughes, and I don't know but we may get Price Hughes himself some day."

"All good men and true," said Dick, feeling honoured by being selected to join so noble a band; "and character is a great thing, no doubt. But your principles of administration: do they differ from those of other companies?"

"Oh, dear, yes; I should just think they do!" said Spencer. "One great vice of other building societies is that they put too many eggs in one basket; they invest all their money in one class of property in one district. Depression comes, trade transfers itself to another district, and your building society is mortally injured. We on the Emancipator proceed on the opposite principle. We scatter our investments over the whole community, so that we grow with the growth and increase with the strength of the whole nation."

"Do you make advances to the builders?" modestly asked Dick, having vaguely heard the accusation.

Dodds looked out of the window, Spencer smiled contemptuously, and then began:—"My dear sir, no building society of such magnitude as ours has so little to do with the speculative builder. That is strictly and absolutely true. I am delighted to see how keen an eye you have for the weak places of building society finance. 'Pon my word, Dodds, I have reason to thank you for finding me such a smart private secretary."

Dick's face burned. "I am sure you are very kind," he said; "I am so glad to learn these things at first hand. Because," he added, somewhat suddenly, "one of my aunts who has saved a sum of £500 is waiting my report before she deposits in the Emancipator."

Spencer laughed. "Tell your aunt," he said, "that if she wants a safer investment anywhere in the three kingdoms she will have to put into Consols, and be content with two and a half per cent. interest. For my part I would not exchange my shares for Consols, though I received £100 for each £50 I had in the Emancipator. But I forgot to mention the distinctive glory of the Emancipator; and that is its affiliated companies. Do you know that round the great central trunk of the Emancipator there have grown up no fewer than eight gigantic allied concerns, with a capital far exceeding that of the original company? Wonderful, is it not? It reminds me of the British Empire, or," he added piously, "the rapid spread of the Early Church. Even when St. Paul went on circuit, the Christian Church did not advance with such rapid strides as the Emancipator has done. But, dear me, how late it is getting!" he exclaimed, looking at his watch. "I have to take the chair at a charitable meeting at six, and then I shall just have time to hurry home for dinner. I must not wait another minute.

Shall see you again heaps of times. *Au revoir!* So glad to have met you."

So saying, Spencer, followed by Dodds, left the room and made his way downstairs.

"Nice fellow that," said Dodds.

"Yes," said Spencer; "but oh, how green! How is it, Dodds, it is always so easy to gull a very clever university man?"

"I suppose," said Dodds, "their cleverness is all invested in classics and mathematics, and they have none left for business."

"Maybe so, maybe you're right. By the way, how much money have you advanced you altogether? A rough guess I mean; it would be too much to ask for particulars."

"About a couple of millions I think," said Dodds, ruefully; "but why remind me of that?"

"Only to congratulate you upon doing so well upon a minus capital; but cheer up, and we shall not go under for many a long day yet. Don't forget to work the oracle if it turns out to be Lady Sidney."

So saying, Spencer jumped into his carriage and drove off.

While the sound of the wheels was still fresh in the ear, Dick was writing to his mother a hurried note:—

My Darling Mother,—I can hardly write to you for joy. Imagine what has happened. I have this moment parted from Mr. Spencer, who has appointed me his private secretary, although he will wait till I take my degree before setting me to work! Isn't it grand—almost too glorious to be true? I lose no time in telling you about it. He was delightfully frank and cordial. I had a long talk with him about the Emancipator. You can tell Aunt Sarah from me that she may safely invest every penny she has in the world with the Emancipator. Mr. Spencer says he would not exchange his shares for twice their value in Consols. So it is quite safe. With dearest love to you all,

I am, your affectionate son,—DICK.

P.S.—Who says miracles don't happen now?

CHAPTER V.

THE WIDOW'S STORE.

GREAT was the rejoicing in the Baptist Manse at Larniff when the letter arrived telling of the wonderful good fortune that had befallen Dick. He was the eldest son, and the hope of the family. His mother had a little property of her own, which had been heavily drawn upon to pay for a university course for her first-born; a college education being a luxury lying far beyond the means of the ordinary Baptist minister of the Principality.

But it would be a mistake to call the Rev. Richard Grant an ordinary minister. Whatever he was—ordinary he was

not. If he had been an Anglican he would have been a bishop, and a bishop of whom the Church would have been proud. As he was only a Nonconformist he never found a wider field for usefulness than the congregation that worshipped at Ebenezer Baptist Church near the Docks at Larniff. He did not fret at the obscurity of his lot. He rejoiced, indeed, too much over the privilege of being allowed

OXFORD, FROM MAGDALEN TOWER.

to minister to the poor and the suffering to care about status or rank or the emoluments of his calling. Meek and patient and learned, he laboured zealously in the service of his Master, living among the poor and sharing their burdens so far as was possible for a man unequally yoked with a wife who chafed like an imprisoned eagle at the bars of her cage. Isabel Grant was a pious and devoted Christian, but she had so keen a sense of justice and of the fitness of things that it cut her to the heart to see her husband spending his life in unrecognised and unrequited toil; while men not possessing a tithe of his solid worth were swaggering in the high places of the denomination. "If you want to get on in this world," she used to say despairingly to her children, "you must push your way. If you do not, you get left. Ah! your poor dear father was born without any push in him."

After a time Mrs. Grant ceased pushing her husband from behind. It was wasted labour; but she concentrated herself with all the more ardour upon making the fortune of her eldest son.

Dick, who was by no means without an inheritance of natural ambition, responded readily enough to the promptings of his mother; and great was the delight of mother and son when Dick won a scholarship that, supplemented by his mother's slender capital, rendered it possible for him to go to Oxford. His father smiled somewhat sadly at his son's delight, and bade him remember that it was dangerous work seeking a place in which to do good instead of doing with might the work that lies ready to hand. "Tut! tut! father," said Dick, "why, you yourself went to college, and why should not I?"

His father was silent, though a reply rose ready to his lips. He had been selected by the Church, set apart to the ministry, and sent to be trained at the cost of the Church. He saw no such call in the case of his son Dick. But it was useless to talk, and the minister knew when to be silent.

When his boy won honour after honour at Oxford the father rejoiced, though with trembling.

"Think not of yourself more highly than you ought to think," he wrote to Dick, who had written home rejoicing over a great triumph in an examination, "and never forget to walk humbly before God and man."

Now when the great news arrived that Mr. Spencer had appointed Dick his private secretary, he was by no means carried away with enthusiasm. "It is a great place, no doubt," he wrote to his son, "in which to do good. Take heed that it be not a place in which to do harm." For the old minister had never altogether got over the prejudice which one of Mr. Spencer's earliest moves had excited in him. About the time Dick was born, a pressing circular came from the head office offering him, as minister of Ebenezer, tempting terms of commission and agency for all deposits which he could bring to the coffers of the Emancipator. "Thy money perish with thee!" he wrote indignantly to the sender of the circular. "Is Thy servant a dog, that he should do this thing? Have I been ordained to the ministry by the laying on of hands, and of the Holy Ghost, in order that I should act as canvassing agent for some London Building Society?"

And for years afterwards no one could so much as mention the Emancipator in his hearing without reviving his indignation. It was not indeed until Mr. J. W. Dodds himself came down to Larniff to lay the foundation-stone of a new Baptist Church, that he suffered himself to be persuaded to listen to the entreaties of the Emancipator agent, Mr. Jeremy, so far as to permit the holding of a meeting in his schoolroom in furtherance of Thrift, which, being interpreted, meant the collecting of deposits for the Emancipator.

The minister met Mr. Dodds at dinner on the day on which the foundation-stone was laid, and was attracted by his genial, unassuming ways. When he ventured gravely to state the reason why he had been prejudiced against the Emancipator, Dodds grasped his hand and heartily congratulated him. "My dear sir," he exclaimed, "do you know that your letter led to a change in the policy of the board. Of seven hundred agents, we have now not one in seven in the ministry, and we heartily wish we could get rid of these."

After this Mr. Jeremy had the free run of Ebenezer, and he flourished exceedingly. The deacons, thrifty and thriving men, put in their piles; the schoolmistress invested her little savings. The Emancipator came to be regarded as the natural savings-bank of the congregation. Mr. Grant himself put no money into the Emancipator, because he had none to invest, there or elsewhere; but, had he been in funds, he would probably have followed his flock in trusting it to the Emancipator. For the Nonconformist, with his ingrained reverence for the pledged word of a godly man, esteeming it a security far more valuable than any legal documents, fell naturally into the trap which Spencer baited. The triumph of the rogue was great in proportion to the trusting honesty of his victims. Confidence in the pledged word of a Nonconformist, built up by two centuries of stubborn rectitude, was the capital on which Spencer traded; and no greater tribute can be paid to the value of such confidence than the fact that even he has not been able to destroy it.

Yet, notwithstanding the years that had passed since Mr. Grant first received the Emancipator circular, and notwithstanding the fact that he had made his peace with its directors, the startling news of his son's appointment did not altogether please him. It revived old memories, and he sighed as he thought that Dick, his firstborn, should be embarked upon a worldly career. Not that he ever dreamed of seeing Dick in the ministry. He knew too well his son's opinions upon that question. But the old man felt instinctively that the private secretary of Jabez Spencer was in the very heart and vortex of a world where Mammon has the precedence of the Nazarene. "Dick will take up his abode in the temple of Rimmon; and, pray God, he may only be a sojourner in its precincts," he observed to his wife, who, good soul, was too much elated at her son's fortune to see anything but its advantages.

But there was another member of the family who was by no means disposed to rejoice in Dick's promotion. Aunt Sarah, the minister's sister, was a woman of strong views, but of a narrow mind. She had been born in poverty, had married a poor man, and was now left a widow of sixty, with the youngest of her family—a consumptive girl of twenty—dependent on the makings of a small sweetstuff shop and a mangle. During her husband's lifetime he had, by much arduous toil and continuous and relentless thrift, accumulated as much as £500, which had been stored in the local Building Society, where it had lain since his death, yielding a much-needed ten shillings a week for the support of his widow and daughter. Sarah Nivens, however, was an uneasy suspicious woman, and the thought that her money might not be safe so haunted her, that one day, hearing of the failure of the Portsea Building Society, nothing would satisfy her but to withdraw her deposits. In vain her brother remonstrated. She persisted, and withdrew her money, only to add a new terror to her existence.

The custody of £500 in gold—for she would have it in sovereigns, no paper money for her!—was a terrible addition to the responsibility of the keeper of a small shop. She had no safe, and the money was heavy to carry about. To leave it in the closet was to tempt fate. The thought of the

RAISING A PLANK IN THE MANGLE, THEY EXCAVATED A HOLE IN THE GRAVEL.

God for having given her a brother to find a way of escape for her out of her trouble.

For a time all went well. She loved to think of the golden hoard that lay hidden in the mangle. "There's never a mangle but mine in all Larniff," she used to say to herself, "that is weighted with gold." She regained her sleep at nights, and during the day worked more vigorously than ever. But after a little time, when the charm of the unwonted security had worn off, she began to miss the interest which she had drawn from the building society. Ten shillings a week meant at least thirty per cent. of her total income. The money in the mangle might be safe, but it earned no interest.

Just at this time, too, scenting the psychological moment, Mr. Jeremy, the Emancipator agent, having heard all about the withdrawal of the £500, came nosing round to see if

gold, which she kept in a bag under her pillow at night, brought on a series of nightmares. Every passing footstep sounded to her ear as the stealthy tread of a burglar. If the door rattled in the wind, a cold shiver passed down her spine, and she clutched her money, preparing to struggle to the death. As an extra defence, she spent ten shillings in purchasing a surly dog; but the beast scared all the children from the shop, and he had to be sent away.

"Never before," said Aunt Sarah, wringing her hands in her apron as she confided her trouble to her brother, "never before did I understand what a wealth of peace and joy there is in that blessed text which says that in Heaven the thieves do not break through nor steal. If only my £500 were there!" The idea of Heaven as a Safe Deposit Company's strong room caused a smile to flit over the grave features of her brother. But he checked it, and said, "Sarah, why don't you put the money in the mangle? No one would think of looking for it there, and it would be with you all day when you were at work."

Sarah, in her distress, jumped at the suggestion. That night, when all was dark and no listening neighbours need be feared, Sarah and her brother, the minister, carefully wrapped up the precious hoard in two old worsted stockings—so that the gold would lie quiet and would not jingle—and then tied the bursting stockings in brown paper, carefully sealing the knots so that nothing could be abstracted surreptitiously. Raising a plank from the mangle, they excavated a hole in the gravel with which the body of the mangle was filled, and buried the money, hardly daring to speak to each other during the operation. When it was over the plank was put back, and all trace of what they had been doing was removed.

Then the minister said softly, "Let us pray!"

They kneeled down in the little room, dimly lit by a single candle, and the minister prayed earnestly that the God of the widow and the fatherless would bless the means they had taken to safeguard the widow's store. Fervently Sarah added "Amen," lifting up her heart in gratitude to

he could not pick it up for the Emancipator.

Sarah Nivens, as befitted a stalwart Baptist, hated the State Church and all the appurtenances thereof. She also believed very fervently in the literal interpretation of certain texts in Holy Writ, which convinced her that the end of the world was near at hand, and that even in her lifetime she might expect to see the coming of the King in His glory, when the elect would be caught up to heaven to reign with Him over a regenerated world.

Now Mr. Jeremy being an astute man, and one who moreover was well versed in the wiles with which to allay the alarms of lone women, whether spinsters or widows, did not hurry matters with Mrs. Nivens. But one day he dropped in "in a friendly way," just to ask if Mrs. Nivens was not going to the great disestablishment meeting that was to be held next night.

"No," said she, rather sadly. "I never missed one when my good man was alive. I have never attended one since he was taken."

"But," suggested Mr. Jeremy, "why should the good cause lose two supporters because it has pleased the Lord to take one away? Is it not the more needful that the survivor should do double duty instead of deserting the pass?"

"Perhaps you are right, Mr. Jeremy; but I have no one to take care of me in the crush, and widows and lone women are best at home," and Mrs. Nivens addressed herself to her mangling more vigorously than ever.

"Come, come, Mrs. Nivens," said Jeremy, "if that is all, my wife will be only too glad if you would join our party: and let us all go together. Mr. Carvell Williams is going to speak, and there is to be a great muster. It will be the last Liberationist meeting before the election."

So it was arranged that Aunt Sarah should go to the demonstration against the State Church; and it was touching to see how much the enthusiasm of the crowd, and the eloquence of the speakers, and, perhaps more than anything else, the reminiscences of bygone times, told upon the old

lady. On the way home, walking between Mr. and Mrs. Jeremy, half-dreaming over again the thunderous cheers of the excited meeting, she caught hazily the words.

"Emancipator!" she said. "Emancipator! Is there any connection between the Emancipator and the Liberation Society?"

Mrs. Jeremy was about to say "No," but her husband stopped her almost angrily. "My dear Mrs. Nivens," said he, "there is no official connection, of course, but they are first cousins I am sure. From Mr. Spencer downwards, our people are dead against Establishments."

"I am very glad to hear it," said Aunt Sarah—"very glad. How any good men can be in favour of such an anti-Christian abomination I cannot imagine."

The good work thus begun was followed up by a long conversation, in which Mr. Jeremy dilated with much eloquence, and a conviction intensified by a sense of the coming commission that he would earn on the widow's deposit, upon the advantages of the Emancipator as an investment. She was shaken but not convinced. When, however, Mr. and Mrs. Jeremy called one Sunday afternoon to take her to hear the favourite preacher of the Second Adventists, she felt as if her prejudices against a building society represented by so good a man, and one so sound in the faith, must have been contrary to Christian charity. She did not know that Jeremy was a man hunting for his brother with the remorseless cunning of a Red Indian. The Redskin on the war trail does not hunger for scalps more than the agent for commissions. But though in the toils, she was not yet wholly captive.

She waited for Dick's report, but when Dick's letter was read to her she sniffed. "Master Dick is a Varsity lad, and very clever no doubt; but he is no expert; and besides he has his own fish to fry now. Who knows but that Spencer promised him the secretaryship just to get hold of my £500?" Like many other people, Aunt Sarah imagined that what was of heroic size to her must loom equally large in the eyes of other people. Hence she smelt a rat, and determined to seek other counsel.

One day the rate collector called. He was an old acquaintance. "What would you do," she asked, "if you were not quite sure of the safety of your savings?"

"I don't know," said he. "But I think I would write to the papers."

Mrs. Nivens cherished the hint, and shortly afterwards her favourite editor received a polite letter, asking whether he would oblige a Constant Reader with an impartial judgment as to the security offered by the Emancipator Permanent Benefit Society for investments of sums amounting to £500.

When the editor read it, he wondered at the faith of Constant Reader in the editorial judgment. "Bless me," he said to himself, "excepting for paragraphs appearing now and then in the London papers, I should not even have known there was such a society in existence. Let me see! let me see!"

MR. JEREMY.

So saying, he rummaged among his book-shelves and found Burdett. He looked up the entry "Emancipator," and was astonished to find how large the society was. "It seems all right," he said. "I see Spencer is in it, and he is smart. And Lawson Corns, too; he would not be mixed up in anything shady. But stay—I think there was a paragraph in the paper the other day." He blew down the tube for his assistant. A wiry, closely-shaven, small man with a goatee beard made his appearance.

"Jones," said the chief, "when did we publish the last paragraph about the Emancipator? I want to see it at once."

"No libel, I hope?" said the sub anxiously.

"Dear me, no. What makes you think of that?" asked his chief sharply.

"Oh, nothing!" said Mr. Jones. "I'll bring the cutting," he added, as he slipped through the doorway. He reappeared a few minutes later with a paragraph which Mr. Spencer had sent round the press a day or two before announcing the increase of dividend, and boasting of the unprecedented popularity of the society.

"That looks all right," said the editor.

"May I ask what is the matter, sir?" said Jones.

For reply the editor passed him the letter from Constant Reader. As he read it he shrugged his shoulders. "Better see the chief reporter, sir; he knows something about it. He is just outside. I'll fetch him in."

"Williams," said his chief, when the reporter appeared, "what do you know about the Emancipator Building Society?"

"Nothing, sir; I mean nothing definitely. But a friend of mine who knows one of the clerks in the Omnibus Bank——"

"What bank is that?"

"Mr. Spencer's bank; a branch of the Emancipator—gave me a tip that I had better get out in time; so I drew my deposit last week."

"Thanks," said the editor; "now you can go, or we shall be late with the edition."

After they left the editor turned to his unfinished leading article. It was in praise of the press. He was in the midst of a sentence eulogising the journalist as the friend of the friendless and the hope of the oppressed. Amid the decay of institutions and the wreck of dynasties, here in the Press was emerging a new and improved tribunal power, before which the mighty trembled and under whose shadow the poor grew strong.

"Hum," said he, "it reads fairly. But all the same I wish I could tell Constant Reader what to do to secure her savings. Let me see, I'll polish off my leader and before I go home I will write to our M.P. He ought to know."

So the answer to Aunt Sarah's letter stood adjourned.

CHAPTER VI.

A NAME TO CONJURE WITH.

WHEN the Hon. Mr. Terrapin was running through the letters that arrived by the midday delivery in London, he caught sight of the familiar envelope of his local paper.

"Confound the fellow," he muttered, "what is he worrying about now? Constituents are bad enough, but if there were many editors like mine, a member's life would not be worth living."

As he read the editorial epistle, his features relaxed. "Oh, that's all, is it? Wants to know if the Emancipator is sound. How am I to find out, I wonder? Just like his impudence. Imagines that Members of Parliament were created to save editors the expense of a London correspondent."

After a little he subsided. "Well, well!" he said, picking the letter out of the waste-paper basket, into which he had flung it, "after all he is not a bad sort of a chap. And where I should be without him I really don't know, so I'll just ask one or two fellows at the Club who are in 'the know.' It will cost me nothing, and with my editor it will be like bread cast upon the waters. Nor shall I have many days to wait before I find it again."

Now it so happened that the first man whom Mr. Terrapin met on the steps of the National Liberal Club that afternoon was Mr. Jackson, the well-known City Editor. "Oh, Jackson," said he, "spare me a minute, will you! What is your opinion about the Emancipator?"

"You know my opinion," said Jackson, "about all these securities—they are not securities. The Emancipator is not a building society—it is a huge building speculation. It will come down some day, mark my words. It is topheavy, and will fall with a crash."

"But, Jackson, you are always pessimist. You say the same thing about the British Empire. Even Consols are hardly up to your mark, you know. But about the Emancipator—what are the balance-sheets like? Have you any reason for your predictions? And why don't you warn the public that is depositing over half-a-million a year in the Emancipator?"

"I have not time to answer your questions just now," said Jackson, "my editor is waiting for me in the City. But, briefly, I may say that the balance-sheet is a jungle in which you are hopelessly lost; that the society is too much mixed up with Dodds, the speculative builder, and that if I wrote what I say we should be threatened with a libel action, which if we won it would cost us a thousand, and if we lost it, ten thousand."

As Mr. Terrapin walked into the cloak-room to leave his hat and coat, whom should he meet but Mr. Dodds.

"Hullo, Terrapin," said the builder gaily, "in a brown study? What's the matter?"

"Oh, that's you, Dodds! You're the very man I wanted to see," said Mr. Terrapin. "Come along and have a cigar on the Terrace. But put your coat on; it's cold."

"Delighted," said Dodds, and leading the way through that sumptuous palace dedicated to the great gods Gladstone and Bacchus, the two were soon comfortably seated on the Terrace looking out over the Embankment. It was a sunny January afternoon, and they had the Terrace to themselves.

"Getting up splendidly," said Dodds, pointing in the direction of the building on the Salisbury Estate, whose huge pile loomed large on the other side of the railway bridge. "In time we shall rebuild London. A young Oxford friend of mine said the other day that we are inaugurating the Augustan—or was

Company found London a squalid collection of tumbledown shanties, and will leave it a city of palaces."

"Really, Dodds," said Terrapin, "you are getting quite eloquent—been having some champagne?"

"Better than that," said Mr. Dodds gleefully, "better than that. Have you seen the *Times* to-day—the agony column, I mean?"

"No," said Terrapin; "has some one advertised for you as next-of-kin and going to leave you millions?"

"Better than that," said Dodds mysteriously, "better than that."

And then he carefully produced from the inside coat pocket a marked copy of the *Times*. Terrapin turned to the advertisement doubly underscored in blue pencil. It ran thus:—

Mr. Nestor and Lady Sidney Nestor having failed to discover the identity of the young man who so gallantly saved their daughter's life at Clapham Junction on Christmas Eve, insert this advertisement in the hope that it may meet his eye, and so enable them to express their gratitude in person.—Dunstan Lodge, New Forest, January 1.

Mr. Terrapin read it over twice; then handing it back to Dodds, remarked carelessly, "Lucky for the young fellow, I should say! But what has that to do with you?"

"Do with me?" said Dodds; "why it has everything to do with me. Do you know where that young man is? Why, sir, he is in my house—in a fair way, I hope, to marry one of my daughters. And do you know who he is? Why, sir, he is Spencer's private secretary. Just like him—just like him. And do you know what that means? Why, sir, it means that what we have long hoped for will come to pass, and we shall have Mr. Nestor as President of the Great Bemridge Estate, which is to create another Ryde at the other end of the Isle of Wight."

Mr. Terrapin's eye fired. He knew the Bemridge site. He knew also—as who did not?—the name and the fame of Mr. Nestor. If Mr. Nestor were president of the Bemridge Estate Company the shares would go up hand over hand. Here was a chance for a quiet deal—not to be lost sight of.

"Dodds," said Terrapin, trying to speak indifferently, "a while ago you offered me some of these Bemridge shares, didn't you?"

"I did; but you would not touch them. To-day they are at a premium. To-morrow, when the accession of Mr. Nestor is announced, they will not be procurable for love or money."

"But I say, Dodds, could you not help me to a few? I have been a good friend to you in days gone by; and in the future— Come now, what do you say to putting a thousand or two my way? I would gladly join the board with Mr. Nestor. What do you say?"

"I will do my best, Terrapin," he said, "but it will be difficult. But if you will write out a formal application I will lay it before the board, and of course it will look much better if it is made out before Mr. Nestor's accession is announced."

"Certainly, certainly," said Mr. Terrapin; "let us go into the club and write it at once. What luck you Emancipator people have to be sure—wonderful luck! By the way, what is the name of Spencer's secretary?"

"Oh, I forgot to tell you," said Dodds. "His name is Grant; he is a son of a constituent of yours. He has made his fortune, never fear."

When Mr. Terrapin had written out his formal application for £2,000 of shares in the Bemridge Estate Company, he gave it to Mr. Dodds, saying, "There! Now remember I am to be a director under Mr. Nestor." Mr. Dodds departed. Mr. Terrapin sat down in the library and wrote to his editor as follows:—

DODDS PRODUCED A COPY OF THE "TIMES."

it Augustinian?—age. Augustus—that was the name—found Rome brick and left it marble. So Dodds and

(Private and Confidential).

My Dear Editor.—The Emancipator is as sound as the Bank. The only people who have anything to say against it are confirmed pessimists whose only investment is the old stocking, and who would pick holes in the Bank of England itself. I have made exhaustive inquiries and I find that you need not fear to recommend the Society. I hear (but this must not be mentioned yet) that Mr. Nestor, out of gratitude for the heroism of Mr. Spencer's private secretary, who saved his daughter's life the other day at Clapham Junction, is going to employ some of his millions in developing the Bemridge Estate, which will double the value of that invaluable asset. As a proof of my faith in the concern I have consented to join the board, and have just made an application for £2,000 of its stock. *Verbum sap.*—Yours truly, J. E. TERRAPIN.

P.S.—Capital leader that was of yours to-day in the Press. It made me feel that if I were not an M.P., there is nothing in the world I would like better than to be a newspaper editor.

When that letter arrived the editor shrugged his shoulders. "I guess that will settle Constant Reader," he said. "Terrapin's no fool. If Terrapin put £2,000 into it—where on earth did he get the money, I wonder?—he is pretty certain to see his way to turn a pretty penny over it. And Nestor! Well, well, in for a penny, in for a pound. 'Tis gold that makes the world go round."

So musing, he sat down and indited the following "Notice to Correspondents," which duly appeared in the paper next day:—

A CONSTANT READER is informed that, after careful and exhaustive inquiries in the most influential quarters, we have no hesitation in saying that she could not do better than invest her savings in the Emancipator.

The next day Jeremy was carefully counting over the five hundred golden sovereigns which had been exhumed from the bed of the mangle. They were all safe; not one missing. He carried them away in triumph, leaving behind a deposit receipt entitling the widow, Sarah Nivens, to five per cent. interest on £500.

That night after leaving Mr. Terrapin, Dodds hastened home to break the good news to Dick Grant, whose ankle was now almost well, and who was somewhat impatiently waiting the doctor's permission to return home. Dodds was in high spirits, and under the influence of his gaiety every one felt more joyous than they had been all that Christmas-time. "The New Year opens well," he said to Dick when the ladies had left the room. "Opens capitally. Why, this very afternoon I had an application from Mr. Terrapin, your member, for a seat on the board."

Dick opened his eyes. "Which you rejected, of course?" he replied. "So notorious a guinea-pig could do you no good."

"Why, Dick, man," said Dodds, somewhat ruefully, "I thought Terrapin being your member, you—"

"Would know him, which is just what we do, and knowing him we would not trust him with a sixpenny piece. But what does he propose you should pay him?"

"Pay him? Nonsense! He wishes to invest two thousand pounds in the Bemridge Estate."

Dick gave a long whistle. "Excuse me," he said, "your news is startling. Why, Terrapin has never paid his election expenses to this day, and the excuse always was that he had not two sixpences to rub together."

"Nonsense!" said Dodds. "Read that," he added, handing Terrapin's note of hand to Dick.

Dick read it, then looking up he asked, "Got the money?"

"No," said Dodds, "shares not allotted yet."

"Well," said Dick emphatically, "don't part till you see his cash, otherwise you will regret it, that's all."

Dodds lit a cigar and puffed away silently for a time.

His opening had not been propitious. But that would soon be retrieved. After a while he produced the *Times* and handed Dick the marked copy. Dick's eyes gleamed as he read it. Then that beautiful woman in the carriage was Lady Sidney Nestor. And they were grateful. He was satisfied. He laid the paper down with some pardonable pride, but said nothing.

After a while Dodds broke in. "Well, my young friend, you're in luck. Now's your chance. It is not every day you get an opportunity of making friends for life with one of the richest families in England."

Dick did not answer. He was looking into the fire fixedly. His thoughts were far away.

"Come, boy," said Dodds, nervously, "what are you going to do?"

"Do? I? What have I to do? I don't understand what you mean," said Dick, dreamily, as if the suggestion of personal action on his part jarred upon him. "I have done what I had to do. What else remains?"

"Why, you simpleton," cried Dodds, wrathfully, "do you mean to say you are not going to push your advantage with the Nestors? Come, come, this is too silky! Here has Providence opened a door into untold wealth, and you ask what you have to do!"

"Well, but what have I to do, Mr. Dodds?" said Dick.

"Make hay while the sun shines," said his host, decisively. "Push your chance with Lady Sidney. That girl is an only child, heiress to all their wealth. Now you have got a foothold, there is no saying what—"

"Mr. Dodds," said Dick, in a tone which startled the individual addressed, from its imperious and offended pride, "you surely do not know what you are saying. No gentleman could push such an advantage. I must beg you not to allude to the subject again."

Mr. Dodds cast down his eyes and bit his lip. When he looked up he was alone.

"The young fool," he growled. "It will have to be done without his help, that's evident."

Meanwhile, Dick, bursting with rage, had rushed upstairs, with difficulty restraining his wrath.

"The cad!" he said, "the insufferable cad! To imagine that because I was lucky enough to save that girl's life, I should exploit the advantage in order to put money in my pocket. Ugh! The memory of it makes me sick."

He hobbled to and fro, disregarding the pain of his ankle, nay, rather rejoicing in the effort which it cost him to bear the physical pain. After a time he cooled down somewhat, composed himself in the easy-chair, and endeavoured to master the intricacies of the Emancipator finance. It was not his first attempt, nor was it more successful than previous efforts.

"Dear me; how stupid I am!" he said, after trying in vain to find his way in the labyrinth of figures. "I would rather construe the most crabbed piece of Greek than explain what all this means. I suppose I shall learn some day, and meantime I had better go to bed."

He was soon in bed and asleep, dreaming strange dreams of labyrinthine mazes of figures. Debits became credits, and credits debits, deficits became surpluses, losses profits, and the whole array of columns upon columns of figures seemed to be marching headlong to an abyss. And over all, as a kind of mirage in the sky, he caught glimpses of the stately beauty of Lady Sidney.

Meanwhile, as Dick was tossing restlessly in his dreamful slumber, his host was engaged on a very delicate and difficult enterprise in his private room. His first impulse was to forge, or rather to get Speight and his brother-in-law to forge, Dick's signature to a letter to Mr. Nestor. He had already

begun to draft the letter to which poor Dick's name was to be attached, when a happy thought struck him. He had no objection to forgery; he and Speight had forged too many bills to scruple about that. But of what use was unnecessary crime? It would do just as well if he, J. W. Dodds, were to write direct to Mr. Nestor.

No sooner said than done. Selecting the most elaborate specimen of Emancipator-headed notepaper, he carefully indited the following epistle:—

The Hon. V. Nestor.

Dear Sir,—My attention has been arrested by your advertisement in the *Times* of this date. It is my painful duty to inform you that the young man to whom you express your gratitude had the narrowest of escapes from death. After saving your daughter he leaped from the train and was hurled violently to the ground, dislocating an ankle and suffering such severe cerebral contusion that he has not yet altogether regained his reason. Thinking that he had recovered sufficiently to hear the expression of your gratitude, I ventured to read him the extract from the *Times*. Alas! it brought on a violent attack of the old paroxysm, coupled with a strange determination on no account to place himself in communication with you.

Regarding him, therefore, as *non compos mentis*, I, as his host and temporary guardian, have taken upon myself to let you know that he is still hardly in a condition to be accountable for his actions, otherwise he would have written you himself.

In conclusion, I may state that the young man in question is private secretary to Mr. Jabez Spencer, M.P., whose multifarious business in connection with the Emancipator Permanent Benefit Building Society (capital, £2,500,000; deposits last year, £650,000) are seriously impeded by the painful condition to which this accident has reduced his most valued assistant.—I have the honour to be

Your obedient and respectful servant,

J. W. Dodds.

When that letter arrived at Dunstan Lodge, Mr. Nestor read it aloud to Lady Sidney.

After it was finished Lady Sidney said, "What did he say was the name of the young man?"

"Really," said her husband, looking hurriedly through the letter, "this fellow—Dodds, is it?—does not mention the name; only that he is private secretary to Mr. Spencer."

"Are you sure?" said Lady Sidney. "Please pass me the letter."

He passed it, and she read it from beginning to end.

"It is very odd," she said, and laid the letter down.

CHAPTER VII.

IN THE TOILS.

IF the spectacle of brave men struggling with adversity affords satisfaction to the gods, mortals may be pardoned for looking with interest upon the struggles of bad men in the toils of their fate.

The first half of 1892 afforded to the financial experts who were near enough to see how things were going, somewhat of the excitement with which spectators watch the last desperate charges of the bull in the arena before the keen-sworded matador arrives to give the tormented victim the *coup de grâce*. To Dodds, as he looks back upon it from the seclusion of his prison cell, even hard labour in convict's dress is paradesical compared with the harass and misery of that terrible year that witnessed the death flurry of the Emancipator.

From the beginning of the year, after the transient gleam caused by the hope of netting Mr. Nestor, everything grew dark. For some days, and even weeks, Mr. Dodds calculated confidently upon securing the great millionaire. By merely boasting about it in certain quarters he had

reinforced the Society with two more guinea-pigs, and had checked here and there the deadly flow of withdrawals. But when Mr. Nestor merely replied, politely expressing his regret for the young man's accident, and requesting to be furnished with his name and address in order that they might call upon him when they came to town, Dodds was furious. He had built up a house of cards upon the gratitude of Mr. Nestor—a gratitude which he had quite naturally conveyed from Dick to the Emancipator. It seemed to him something monstrous, something almost against nature, that so wealthy a man, whose only daughter had been saved from a horrible death by Dick Grant, should not show his gratitude by placing his millions, or at least his credit, at the disposal of Dick's patron.

"Such ingratitude will meet its reward," he said; and he seemed to find peculiar consolation in the psalm in which uncomfortable things are said about the wicked who spread themselves like a green bay tree.

His own state, however, was too serious to admit of much attention either to psalmists or millionaires. Dick had long ago gone back to Oxford, a little disillusioned as to his host Dodds, but as full of illusions as ever concerning his patron Jabez Spencer. Before he returned to the university, Mr. Dodds drove him round the stately edifices, in which the deposits of the Emancipator investors were lavished on a speculative building worthy the Napoleonic ideas of the great Jabez. Dick admired the bold and picturesque outlines which Whitehall Court made against the evening sky; but he could not bring himself to admire the huge overgrown hulk on the Embankment that hoists its ugly shoulders into the heavens.

"Seven hundred thousand pounds have been put into this building," said Dodds, in awe-struck tones, "and it will cost another £300,000 to complete it. A million pounds—the cost of a first-class ironclad."

Dick said nothing. He was gazing at Cleopatra's Needle: and the contrast between the granite monolith standing silent among its sphynxes, and the monstrous mushroom that looked down upon him from across the Embankment Gardens, was too glaring. It reminded him somewhat unpleasantly of the contrast between the Oxford ideal of life and conduct and the vulgar money-making swagger and push of the smart financier.

They drove to the Carlisle Mansions in Victoria Street, and then on to the Albert Chambers in Hyde Park Court, Knightsbridge.

Mr. Dodds gazed with unaffected admiration at his own handiwork. "There!" said he, as they moved from the last colossus, "no one can say that I have not left my mark upon my time. Ministries will come and ministries will go, thrones will rise and thrones will fall, but through all these changes successive generations of men will live in comfort under roofs of my building."

When Dick bade his host good-bye at the railway station, he settled himself down into the corner of a carriage and gave himself up to a flood of reflections—bitter sweet—but tending to become ever more and more bitter. How wide the gulf that yawned between his arrival and his departure! He had in one sense succeeded beyond his utmost expectations; and yet he had caught his butterfly only to find that the grasp of appropriation had spoiled the delicate pencilling of the fluttering wings. How he loathed that building on the Embankment!

"Cost as much as an ironclad, did it?" he muttered to himself. "If it only had been an ironclad, it might have capsized and gone out of sight. As it is, it will remain an eyesore to generation after generation. What a desecration of the finest site in London!" He looked out of the window. The train was rushing through one of the

loveliest parts of southern England. The snow lay upon the hilltops; the air was still with the sense of coming frost, and the ruddy glow of the setting sun, reflected from the panes of a farmer's house, gave a brilliant eye to the expressive features of the rural landscape. Dick, who was very susceptible to natural beauty, allowed his gaze to wander lazily over the wintry scene, when suddenly there came upon his view one of those hideous enormities in staring yellow by which advertising malefactors have been allowed to deface some of the fairest scenes in English landscape. He pulled up the window and turned away. "Liver pills," he said. "Curse them! Why should men who have neither soul, nor heart, nor brain, torment us about our livers?"

As the day darkened and the outside world became more and more indistinct, he seemed to see himself and Dodds and Jabez Spencer busily engaged in erecting hideous yellow signs of liver pills in front of Westminster Abbey and across the entrance to Westminster Hall.

The worthy Dodds, however, was much more practically engaged. He was dodging bankruptcy. His devices, ably seconded as they were by the indomitable Jabez and the unscrupulous Speight, hardly secured them more than a moment's breathing time. The schemes and the trickeries of these three worthies would afford material for an epic poem. They had eight different concerns to keep going. For years they had financed each of them by the simple expedient of passing cheques round; and, by inserting particulars of imaginary profits and fictitious commissions, they had adjusted balance-sheets; but this could not be kept going for ever. Be the thimblerrigger never so adroit, in time the dullest of countrymen can spot the thimble under which the pealies hidden. In a country fair the reader may sometimes have seen the peripatetic juggler spinning half-a-dozen dinner plates on a table. And very deftly he does it. His hand with hardly perceptible motion keeps the whole number of plates constantly rotating; never touching each other, never dropping, until at last by some false move one plate falls, and all the rest of the whirling crockery is shivered into ruin. So long as the faith of the depositors in the Emancipator kept up, so long Jabez the Wizard and his confederates were able to keep the allied companies spinning gaily. But when the depositor began to weary, the catastrophe became inevitable.

If a vessel has sprung a leak in a stormy sea, and the water pours in beyond the power of all the pumps to keep it under, no deft seamanship, no brilliant manœuvring, no genius-inspired use of sails or engine can save the water-logged ship. If the leak be not stopped the ship must go down. The heavy and continuous withdrawal of deposits from the Emancipator revealed the leak, which no amount of bluff could stop. There was no actual run upon the concern, but money was taken out of it at the rate of more than £2,500 per day. In the eight months before it finally collapsed, £500,000 was paid across the counter to suspicious depositors who had got wind that things were not all right.

In June the Barkers smashed. The Barkers were also Dick Turpins of finance. Beginning with a single public-house in 1879, they plundered the public to the tune of £639,000 by 1892. They asked the public to lend them money at seven per cent., without security, and the public accepted their invitation so freely, that the only embarrassment of the partners seemed to be to get rid of it. Among other things they published three papers, one bearing the promising title of the *Daily Oracle*, over which they threw away £40,000.

They, too, had their affiliated concerns, which they kept going as Dodds was kept going as long as deposits flowed in freely. When they began to flow out, the firm stopped

payment, and one of its members silenced inquiry by the simple process of blowing out his brains.

All this was bad for the Emancipator, increasing the tendency to panic, and rendering it more than ever hopeless to keep the ship afloat. From the first the Omnibus Bank was the chief source of danger. Although Jabez told every one that all that was wanted to make it a prosperous concern was more business and better support from the shareholders, he himself judiciously transferred 750 out of 1,013 of his shares to other hands.

Gradually the toils closed round them, despite their efforts to escape. Forging names to accommodation bills, a favourite device in times past, was no longer available. Falsifying wages bills might bring in petty cash, but it would not stop the leak. To suspend payment of deposits would be to throw up the sponge. They borrowed where they could, paying as much in some cases as twenty-eight per cent.; but that in the nature of things could only be a temporary expedient. Besides, they had mortgaged and double mortgaged all they had.

In this extremity the mind of Dodds turned once more to Mr. Nestor. Surely if the case were properly put before him, the commonest gratitude would lead him to see his duty to the society! It was, indeed, affronting Providence to refuse the use of his name to save the Emancipator, after the secretary of its director had saved the life of his daughter. So without saying anything to any one, Mr. Dodds despatched an eloquent epistle to Mr. Nestor, which, as he said to himself, ought to move the heart of a stone.

He reminded him of the gracious providence which, using an official of the Emancipator as an instrument, had rescued his only child from a violent death. He dwelt upon the immense services which the company had rendered to humanity, and he set forth in general terms the magnificent estate.

"But," the letter continued, "just as the life of your beloved daughter hung in the balance when our secretary at risk of his life and limb snatched her from the threatened doom, so is the existence of this splendid, I may say this national, institution threatened by an altogether unfounded suspicion, promoted by unscrupulous enemies, which is making a run on our coffers that, if unchecked, must bring everything to the ground. I do not ask you to risk anything to avert this frightful disaster. Only allow us to announce that you have accepted the Presidency of the Society, and the plague will be stayed. You will have rescued hundreds of thousands of the most deserving and industrious of the poor from starvation, and a grateful nation will heap blessings on your name."

"Pish!" said Mr. Nestor, as he finished reading this remarkable epistle, throwing it on the table.

Lady Sidney picked it up and read it carefully through. "The fellow does not even now tell us the name of Nedelca's deliverer. One would think that her rescue was part of the official duties of the secretary of a building society."

"PISH!" SAID MR. NESTOR.

Next day Dodds turned eagerly to his letters. There was the usual quantum of disagreeable missives, menacing intimations of the coming storm. But there was nothing from Mr. Nestor. "Strange," he said. "But perhaps he is away from home. The letter will be forwarded."

Next day he read in the *Times* that Lady Sidney Nestor had been present at the Drawing-room.

Mr. Dodds walked about his room irresolutely, and then wrote a letter to Mr. Nestor asking if he had received his previous epistle, and begging the favour of an immediate reply.

He had not long to wait. From the Emancipator office next day came a letter, opened and apparently read by the clerks, which ran thus :—

Mr. Nestor presents his compliments to Mr. Dodds, and in reply to his letters of the 4th and the 7th June begs to say that he cannot accede to his request. Mr. Nestor fails to understand on what ground Mr. Dodds infers that gratitude to a youth who was of service to Miss Nestor should oblige Mr. Nestor to save the life of a worthless swindle with which, so far as he knows, that young man has nothing to do.

Mr. Dodds read this letter at first in amazement, then in fierce indignation. After pacing up and down the room in wrath, he sat down again and read it a third time before putting it away among his private papers.

"I don't mind," he said, sighing heavily, "that the game is up. I am tired of it. But it saddens me to think of the shameless ingratitude of man."

"THE GAME IS UP."

CHAPTER VIII.

THE LAST EFFORT.

PARLIAMENT had been dissolved. The land was in the throes of a contested election. Like other members, Jabez Spencer had to fight for his seat. He could ill spare the time or the money. But he could not flinch. Cost what it might, he must go through with it to the last.

He summoned Mr. Speight and Mr. Dodds to his office before leaving town. "Telegraph me," he said, "if anything desperate occurs. Meantime, get ready the new issue of Trust Stock that constitutes our last card. If that fails it is a case of *saure qui peut*. But if luck holds, and we come back triumphant from the country, we may pull through yet."

Mr. Speight shrugged his shoulders.

"I don't mean for ever, of course," said Jabez. "Situations as we are now, a year's grace seems an eternity."

"It is quite as far off," said Speight. "The great public is a great fool, I allow; but with Barkers' failure still fresh in its mind it is not going to stump up £50,000 just to keep us going."

"I don't wish to dishearten any one," said Dodds, "but however the election goes, the Emancipator will suspend payment in September, as soon as ever the Bank closes its doors. We might, perhaps, hang on till October, but not a day longer."

Jabez listened impatiently. "That is all very well for you croakers, but as for me, I am going to bluff it through. Whatever it may be in London, the Emancipator is a great card in Fernley."

Before leaving the office, he telegraphed to Dick Grant, asking him if he could accompany him through the election. Dick assented gladly enough. It was a new experience. Some day, he thought, he would be a candidate himself. He could not begin too early. He was considered a promising speaker at the Union, and he rejoiced to think that he might have an opportunity of proving his usefulness in an arena in which he felt at home. Taking the night train, he reached Fernley early next day, and made his way at once to the Liberal headquarters. Jabez had arrived before him, and the preliminary canvass was well under way.

Fernley is a town in the north-east of Lancashire, famous for its cotton spinning and its Radicalism. Most of the mills lie down in the hollow of the valley, from which a long street runs uphill towards Lord Hartington's old constituency. When work is busy the smoke from the chimney forest is dense and blackening. The air is humid with an excess of moisture which makes the fortune of its cotton spinners; but the north-east winds that sweep over the moors are bitingly cold. The Mechanics' Institute, with its classes, forms the chief glory of the town—and of it Fernley is deservedly proud. A hard-working, somewhat grimy community, with more chapels than churches, and more chimney pots than flower pots; such was the constituency in which Dick was to gain his first experience of electioneering in England.

He soon found that Jabez did not count upon him for speech-making. He had more to do with correspondence than with canvassing. He had to see a good many deputations, and he asked Jabez how to deal with them. He shrugged his shoulders.

"Deal with them so as to get their votes, but remember that I am on the high moral line. You cannot pitch it in too strong. Go it on the Grand Old Man, the Emancipator, and the Nonconformists. And whenever you run short, pitch into the Irish landlords; these rascals have no friends."

Dick disliked the cynicism of his tone, but as he was a Nonconformist who idolised Mr. Gladstone and identified his own future with the fortunes of the Emancipator, he found little difficulty in carrying out his instructions in all sincerity.

Once or twice he found time to attend the Liberal meetings, and was astonished to see the amount of semi-religious fervour Jabez threw into his speeches. The contrast between the cynic of the committee-room and the enthusiast of the platform revolted him; but he remembered that he had heard that Sir W. Harcourt and Mr. Chamberlain were quite as bad, and yet were thought none the less of by their respective admirers. "After all," he reasoned with himself, "these men may be mere maskers. No one can say that of Jabez Spencer. There is the evidence of sterling sincerity in his life-work. Who has a better right to denounce the Irish landlords than the man who has raised millions to make the working man his own landlord? After all, the Emancipator covers a multitude of sins."

From all these day-dreams he was rudely awakened one day by a letter from Mr. Dodds. It was his duty to open all the chief's letters, excepting those marked private, and to note their contents. Usually Dodds's letters to Spencer were sealed and marked "Confidential." There was nothing on the outside of this to show that it was from Mr. Dodds, or that its contents were intended for Jabez alone. Dick opened it and read it with the rest. As he did so a haze passed over his eyes. The words danced before him like motes in the sunshine. He could not make them stand still. He

AS THE HORSE WENT DOWN IT JERKED MR. NESTOR OFF HIS SADDLE, AND FALLING HEAVILY,
HE BROKE HIS NECK AND DIED INST. NTLY.

laid the letter down, pressed his hand over his eyes, and then with an effort took up the paper and read to the end. It ran thus:—

My Dear Jabez,—Though the wicked triumph for a time, yet shall their foot slide in due season. Read the enclosed cutting, and rejoice at the avenging power of the Almighty. This man, the ingrate, the monster who refused to stretch out a hand to save the Emancipator when one word from him would have done everything—although our secretary had just saved his daughter from a horrible death—see how he has gone down quick into the pit.

“Verily there is a God that judgeth in the earth.”

Yours sincerely, J. W. DODDS.

The newspaper cutting was as follows:—

SUDDEN DEATH OF MR. NESTOR.

A profound sensation was occasioned in London yesterday by the sudden death of Mr. Nestor, the well-known American millionaire. Mr. Nestor, with Lady Sidney and their daughter, were riding along the Embankment, when, just opposite Cleopatra's Needle, they were startled by a runaway hansom. The driver had been thrown from his seat, and the horse, wild with fear, was galloping madly along. A lady inside the hansom was screaming loudly. Mr. Nestor, seeing that the lady would in all probability be killed, turned his horse's head, and, trotting forward, prepared to snatch at the reins of the runaway as it passed. He succeeded in catching the reins, but when he tried to pull the horse up it plunged and kicked so violently that it overturned the hansom and fell with it. As it went down it jerked Mr. Nestor off his saddle, and falling heavily, he broke his neck and died instantly. The lady was extricated unhurt. Mr. Nestor was taken to Charing Cross Hospital, where the doctors pronounced him dead. Great sympathy is expressed with Lady Sidney and her daughter, who witnessed the fatal accident. We cannot speak too highly in praise of the deceased, who literally gave his life to save a woman from death.

The line “opposite Cleopatra's Needle” was underscored, and underneath was written, in Mr. Dodds's handwriting, “and also opposite our Salisbury Estate Building. Is it not like the vineyard of Naboth the Jezreelite?”

Dick's whole soul rose in revolt against the cold-blooded malevolence of the pharisaic Dodds; but mingled with his disgust was a more personal feeling. What was the meaning of this reference to Mr. Nestor's ingratitude? Had they dared? . . . Dick refused for a moment to admit the possibility of such an infamy. But on reading the letter again it seemed too clear. In some way, he could not imagine how, these men—for there was no doubt that Jabez was privy to the plot—had endeavoured to make capital for the Society out of his act. The thing stabbed him in the most delicate place. He had hugged the thought that he had saved Miss Nestor, but he had hugged much more proudly the other thought that he had scorned to blot that record by revealing his name. And now there seemed no doubt these creatures had been trying to exploit the gratitude of the Nestors in order to bring grist to their own mill. They had failed, and now they gloated like vultures over the corpse of the brave man whose death was so heroic.

In a towering rage he paced backwards and forwards, resolved to confront Jabez Spencer with this letter, and to demand an explanation. He had not long to wait. Just at this moment the Liberal candidate entered the room. He was not in a very good humour. He had supped too heavily the previous night, and had slept badly. His head

JABEZ, MAD WITH RAGE, FLUNG DICK OUTSIDE.

was aching, and there was a dour look about his eyes which Dick did not remember to have seen there before.

“Mr. Spencer,” said Dick, with an effort repressing his passion, “what does that mean?”

“A letter from Dodds, I suppose,” he said carelessly. “I can attend to that later on. I want to see the letters about to-night's meeting. That is the most important thing. Holloa! why the devil have you not opened the letters?” he asked abruptly, seeing that more than half lay unopened before him.

“Because,” said Dick, almost losing control of himself, “because I want an answer to my question. What is the meaning of that letter?”

Spencer looked at his secretary in blank astonishment not unminged with anger. “You damned young puppy! What do you mean by speaking to me like that?”

“I mean,” said Dick, “that I must have an answer to my question. If what seems the plain inference from Mr. Dodds's letter is correct, a most unwarrantable liberty has been taken which gravely concerns my honour. I insist upon an explanation.”

“You insist, do you? Insolent boy! Who are you to dictate to me? Another word, and I show you the door!” He rose as he spoke, and approached Dick in menacing fashion.

Dick stood his ground. “I have a right to insist,” he began, but before he finished the sentence, Jabez, mad with

rage, had thrown himself upon him, and thrusting open the door with his foot, flung Dick outside. The door opened immediately on the staircase. Dick made a snatch at the banisters, missed them, and fell heavily down the long flight.

The Liberal candidate, returning to his room, rang the bell violently. The servant answering it was horrified to come upon the senseless body of Dick lying half-way down the stairs. He had fallen on his head and shoulder. His body was huddled up, and a little blood was flowing from a contused wound on the temple. The man at once ran down to the hall and summoned a fellow-servant.

"Been an accident on the stairs," he said hurriedly. "It's poor Mr. Grant. He's all bleedin' and senseless."

Jabez rang again. "Answer that bell, Jim!" said the first servant, "while we carry Mr. Grant to a bedroom."

Jim, however, instead of stepping over Dick's body, brought up the rear; watching with the keen interest natural to a boy the process of raising the senseless form. "Is he dead?" he asked under his breath.

The men made no answer, but silently and gently carried Dick upstairs. Again Jabez rang his bell, and as the answer was not instantaneous, he burst open his door, intending to shout angrily for a waiter.

But just as he opened the door the little procession was passing it. The first bearer, walking backwards, was carrying Dick's head and shoulders. The other was holding the body at the knees; the page boy was bringing up the rear.

Jabez saw the pallid face, the blood oozing from the ugly wound on the temple, and a horrid fear suddenly clutched his heart, compressing it with such a grip that he reeled with pain. His face became livid, and he gasped for breath.

"It's Mr. Grant, sir," said the bearer carrying the shoulders. "We found him doubled up on the stairs. Shall we bring him into your room?"

"No! no!" stammered Jabez. "I have all my letters about. Take him to his own room."

The men passed on with their helpless burden.

Jabez returned to his room. The page followed him unperceived.

Jabez sat down by the table and buried his face in his hands. The boy stood, not daring to speak, waiting till the gentleman should look up. He was a tall boy for a page, in dark uniform and bright brass buttons.

The man he was looking at shook and groaned. At last the boy spoke. There was no answer. Jabez was immersed in his own thoughts, not apparently of the pleasantest description, from the shuddering which every now and then seemed to

convulse his stalwart frame. At last the page, feeling that he must do something, went up to Jabez and laid his hand on his arm, saying, "Sir!"

Jabez started back in his chair, and seeing vaguely a dark uniform with buttons, he exclaimed with a groan, "Good God! Have you to take me already? But I did not mean to kill him; it was his own fault."

"I don't know what you mean, sir," said the boy. "You rang the bell, and I've come for your orders."

Jabez discovered his mistake with immense relief, and not without disgust at himself for being off his guard.

"Oh, yes, so I did. But this accident has put everything out of my head. You may go; I don't want you now."

The page went off. On his way down he met the waiters returning from the room where they had left Dick.

"Is he dead?" said the boy, repeating the question.

"Seems like a murderer, he do," he added, indicating Jabez by a jerk of his thumb.

"Hold your tongue," said the waiter; "Mr. Grant's only in a faint. Run for Dr. Hunt; he is just round the corner."

When Dick opened his eyes he was in a darkened room. There was a dull throbbing in his head.

"Where am I?" he asked faintly.

"In the hospital," said a pleasant voice near his pillow. "But you must not talk."

By degrees he could see his surroundings, and could recall the fracas with Jabez.

"How long have I been here?"

"Only since yesterday," said the nurse. "But if you talk I must leave you. You will soon be all right if you keep quite still. Excitement is the only danger. Now, drink this and go to sleep."

He took the medicine mechanically, and very soon dozed off into unconsciousness. When he woke again he felt better. It was late at night. But outside there were sounds of tumultuous cheering, again and again renewed.

"What is that noise?" he said.

The nurse smiled. "You're better now, aren't you?" "Nothing does a patient so much good as good news," she said to herself. Then she added, "You will be glad to hear that Mr. Spencer has been re-elected by a large majority. That is why they are cheering. He is very popular in Fernley—a real good man, they say."

Dick shut his eyes and drew a long breath. Everything was going as he had wished it. And yet, somehow, everything had gone wrong. And as the cheering crowd that was escorting Jabez back to the hotel passed the windows of the hospital, Dick felt sadly that in some way, he did not exactly know how or why, he had made a false start.

"EXCITEMENT IS THE ONLY DANGER," SAID THE NURSE.

CHAPTER IX.

THE CRASH.

WHEN Jabez returned to town, fresh from the bracing influence of a hotly contested election victoriously fought, the flush of success he had felt when he listened to the ringing cheers amid which he had left Fernley, gradually died away. He had won the seat; but that had never been much in doubt. He was M.P. again. He had triumphantly demonstrated his possession of the unshaken confidence of his constituents. But that would go only a small way in staving off his creditors. And the nearer he came to London that glorious July day the more his spirits sank. The Emancipator was in its death flurry. Already in imagination he could see the huge monster spouting blood and churning the water in its last agony. In a few weeks all would be over—and then?

When he arrived at Hercot Lodge the pleasant green of the shrubbery and lawn, the musical lapping of the river upon its margin, and the enthusiastic welcome of his family for a moment chased the gloom from his brow. But after he had received their congratulations and had retired to his room the transient gleam faded. On the table lay a telegram from Speight the lawyer:—

Consultation to-morrow at 10. Attendance indispensable. Drain continues.

He shrugged his shoulders; then, taking down Kirchner's bulky volume on "The Law of Extradition," he eagerly pored over its pages. Presently he shut the book up, and put it back on the shelves.

"It must be the Argentine. Spain won't do; it is too near." Then he looked for his private bank-book and scrutinised the figures. They apparently gave him little satisfaction. Unlocking his safe, he took out his available securities. His eye brightened as he saw that they amounted to a considerable sum.

"Enough to start with," he said, "in a new world when the time comes to cut and run. I am all right."

The thought consoled him; and he strolled out on the lawn to smoke a cigar before dinner.

It was a beautiful summer evening. The heat of the day had died away, a slight breeze had sprung up, and there was a delightful sense of freshness in the air. Jabez stood and watched the wreaths of smoke from his cigar slowly curling up towards the large leaves of the plane tree under which he was standing. The swallows were busily hawking for insects across the river, on which a solitary swan was floating motionless as if half asleep, while its shadow reflected in the waters recalled the familiar lines:—

The swan on still St. Mary's loch,
Floats double, swan and shadow.

Across the river from a distant field, where the aftermath was showing clear and green, he heard the occasional low of cattle. Everything was quiet, peaceful as an idyll, and the contrast between externals and the anxiety within irritated him. He turned on his heel and began a somewhat feverish tour round the grounds.

The garden was in all the luxuriance of midsummer beauty. The lawn on which he had spent many a happy hour at tennis was rolled as smooth as a billiard table. The net was still standing as if inviting to a game. Jabez hardly noticed it. The geraniums in the flower-stands shone clearly in contrast to the emerald green of the lawn. But turning from them he walked to his favourite hobby, the famous tennis court, on which he had spent over £2,000. Here, for a moment, he swelled with pride. It was the best tennis court, he used to boast, in the whole county. It had been built regardless of expense, and the amount of thought which had been given to the building of this play-

JABEZ STOOD AND WATCHED THE WREATHS OF SMOKE
FROM HIS CIGAR.

thing was almost as much as that required for the launching of a new company. Jabez cast a lingering look over the familiar place; then, as the thought burst upon him that in a few weeks, it might be in a few days, he would see it no more for ever, he muttered passionately, "It is a damned shame!"

It may seem strange, but so inscrutable are the mysteries of self-deception, that Jabez actually felt that he had good reason to murmur at the ways of the universe which doomed him to leave his lordly pleasure-house almost before he had entered into possession of it. He recalled how he had planned this nook and that corner, and how money had been poured out like water to make the place perfect, a retreat for a prince or a millionaire; and now to be cast out of it all! And why?

These luxuries had been paid for by the earnings of the poor; but that never entered his mind. He thought as little of it as the monarch thinks of the savings of the small taxpayer whose contributions make up his princely revenues. It was to him only the natural order of things that the many should toil and that he should have the fingering of their money. That they should lose it after all was hard, no doubt, but what was it compared with the hardship which awaited him? His depositors would lose their £100 or £500, and many of them would have to exchange a more or less squalid independence in their own cottage for the grey monotony of the workhouse ward. But that was a small thing compared with the plunge which he would make when cast out of Hercot Lodge, expelled from the House of Commons, and driven out like another Cain to wander in an alien world. Jabez was angry, and felt that

he did well to be angry. In his rage and disgust he felt an almost malignant joy at the thought of the immensity of the crash which would shortly startle the public.

Brooding over such subjects he made but a poor show at the dinner table. It might be the last meal he would eat in the Lodge, and that thought did not stimulate his appetite. After dinner his spirits somewhat revived, and he reflected that the issue of the Trust Bonds was still to be made. If they went, it might enable him once more to disappoint envious fate and to triumph for a little while longer. It could only be for a little while, but "Sufficient unto the day is the evil thereof," said Jabez piously, as he went to bed; "and let to-morrow bring what it will, I am prepared for the worst."

Next morning, when Jabez went up to town, he took with him all his securities in a small portmanteau, in order to make ready for flight the moment the game was up. He would cross that night from Harwich to Antwerp, so that any one watching him might be thrown off the scent, and then would quietly make his way to Lisbon, where he would take passage for the Argentine under an assumed name. Once there he would be out of reach, and the baffled minions of the law might stretch their hands after him in vain. It was therefore with some sense of relief that on driving to the office he found that affairs were not so bad as they had at first appeared. He received the congratulations of his subordinates on his re-election with an easy grace. He was soon closeted with Speight and Dodds. They told him the real state of the case—that the drain on the Emancipator, instead of decreasing, was increasing. Some one must have passed the word that they had better get out while there was time, and the depositors were withdrawing with quite unprecedented alacrity. At the rate at which they were going it would be impossible to keep the doors open another month. Meanwhile the thing to be done was to issue the Trust Stock, and this was the urgent and pressing business for which he had been summoned to the office.

The necessary formalities were soon gone through, and next morning, the 31st of July, the British householder received at his breakfast table a circular inviting him to take up 20,000 of the £5 shares, of which £2 10s. was to be paid up at once at 5s. per share premium. Accompanying the circular there was a memorandum, drawn up with the accustomed skill of the experts of the Emancipator, calling attention to the astonishing prosperity of the Trust. In 1876 it had only 46,000 depositors, while in 1892 the number had risen to more than half a million. The whole of the preliminary expenses had been paid off, and a reserve fund of £36,000 had been created, and dividends had been paid to the shareholders of seven per cent. for the first year, and of eight per cent. for every subsequent year. Seldom, indeed, was the British investor afforded the opportunity of such a safe investment. Many circulars had the trio sent out, but never had they baited their hooks so lavishly. It was their last chance. £50,000 paid in in the course of the next fortnight would tide them over Michaelmas, and in the meantime who could tell what might not happen?

Unfortunately, however, for the calculations of the promoters, the British public for once was wary. Barkers' failure was still fresh in the public memory. Ugly rumours were gaining ground as to the position of the Emancipator. In a short time it was found that the last card which had been played had failed. The game was up. Nothing but a miracle could save them now. Dodds, more or less dazed with prolonged anxiety and many sleepless nights, almost persuaded himself that a miracle would happen for their deliverance.

"Who knows," he said one day in the board-room, "who

knows but that the same power which dried up the Red Sea in order to make a passage for the Chosen People, and smote the Assyrians when they encompassed the sacred city, may intervene on our behalf? Who believes that the day of miracles is past? It was only last Sunday that I heard a noble discourse from our minister on the text, 'The Lord's arm is not shortened that it cannot save,' and the words brought healing like the balm of Gilead to my soul."

Speight, who was glancing over some deeds when the worthy Dodds gave expression to this semi-soliloquy, looked up sharply and said, "Come, come, Dodds, that is a bit too strong. The Almighty must have precious little to do if He works a miracle to save you and me."

"I don't know," said Dodds mournfully; "I think that we are worth as much as those stiff-necked Jews who were always having miracles wrought for their benefit, to save them from the consequences of their sins. But it is no use talking to you, Speight; you are an unbeliever, and know not the wondrous ways in which the elect have been delivered from the dangers which seemed about to overwhelm them."

"I wish the miracle would hurry up, then," said Speight. "If it does not arrive before the beginning of September it had better stay away."

Jabez meantime preserved a serene front, and met his friends and colleagues as if nothing had happened. He seemed to join even in the curious little intrigues which always go on when a new Ministry is being formed, in order to push what he considered his claims and chances of an appointment. In the assemblies of his intimates and associates, with whom he was wont to be hail fellow, well met, in the National Liberal Club he was spoken of—certainly without any disapproval on his part—as the proper person to be Her Majesty's Postmaster-General. At their little dinners and over their finely-flavoured Havannas, he used to say that of course it was not for him to put forward his personal claims. He was quite willing to stand on one side. But Mr. Gladstone, as a man of business, must know that there was no one in the whole party who, from his experience in managing a gigantic financial business, could be compared to the man who had built up the Emancipator. Who was Mr. Labouchere in comparison?

"Mr. Labouchere knows nothing of business, whereas I have for years conducted enormous financial concerns which throw the Post Office Savings Bank itself into the shade. If this Administration is to give satisfaction to the country, what is wanted above all things is to put honest men and business men at the head of the great departments of State."

When the new Administration had been completed, and no place had been offered to Jabez, he shrugged his shoulders and gave his friends to understand that Mr. Gladstone had passed him over because he knew that no slight could damp his loyalty or shake his devotion to the great cause.

"They can count upon me, you see, whatever happens. Whereas, other people, if they do not get what they want, are apt to turn ugly."

And Jabez looked the personification of all the Christian virtues.

Meanwhile, August was rapidly running out. At the end of August the crash would come. Jabez kept his own counsel as to his intentions. Once or twice Speight asked him rather nervously what would happen if the doors were shut.

"Proceedings in bankruptcy," replied Jabez airily, "proceedings in bankruptcy, and then each man for himself and the devil take the hindmost."

As for Dodds, as day followed day, and the hoped-for miracle didn't arrive, he began to look more haggard than

ever; but no thought of flight ever crossed his mind. In great distress he asked his lawyer what he thought of the situation.

"Bad," said he.

"Yes; that we know, so far as the Emancipator is concerned. We shall shut up before the week is out. But about ourselves?"

Speight shrugged his shoulders. "Who knows?" he said.

"Of course," said Dodds nervously, "there have been one or two little transactions which would not look very well in court. You know those bills?"

"Oh," said Speight cheerfully, "that was a long while ago. You can trust your clerks, can't you?"

"Oh, certainly," said Dodds. "There is only one man who knows anything about it, and he is my brother-in-law; and I do not think he could say anything, even if he chose."

"Why?" said Speight.

"Because if we swing we swing together, for he was in the business as much as any one. Besides, I do not see how he could say anything about me even if he wished to, considering the way in which he wrote to his sister before I married her."

"Got the letter?" said Speight, quickly.

"No," said Dodds, "but my wife has it, and I will bring it you to-morrow."

"Dodds," said Speight, "we can't be too careful of the cards which we have left; have them well in hand. Heaven knows they are few enough."

Next day Dodds handed Speight his brother-in-law's letter. Speight took the letter and read it. It ran as follows:—

You know how truly I can claim to be absolutely the best judge of the man himself, and when I say how it would rejoice my heart to hear that Dolly consents, I am saying in a few words that which I could amplify into many sentences. I know him to be a genuine honourable man, incapable of doing an injustice, and one who, having made a position in life, would now take the keenest delight in ministering to the happiness of others. His sincerity I can vouch for. I will say nothing now of his position in life, beyond stating that he is possessed of an ample fortune, and thus can bestow upon the object of his affections many advantages. It is rather of the heart than the pocket or head that I would beg a favourable reply. Dolly would gain the truest love of a man everybody respects and speaks well of, and I am quite convinced by accepting him she would rise to an honoured position of blessing and usefulness, that must tend to her true joy and happiness. Really it seems almost a ruling of divine Providence that there is just now the opportunity given. Now, dear aunt, I am afraid I shall weary you, though I have not said all I wanted to, or could say. May the Lord, the Giver of all good things, in His mercy bless her in this most sacred matter, and keep her! I see that the path of duty is the one that will cause a noble and true heart to rejoice in having secured the affection of one who would be, I am sure, the loving wife of a loving husband. This is my prayer.

"Pretty strong evidence that," said Dodds.

"Yes," replied Speight, "but if once the court gets on that clue it will take more than this letter to save us. However, let us hope for the best."

August the 31st came, and the 1st of September. Still the doors of the Emancipator were open. Dodds began to believe that the miracle had arrived; but on the afternoon of the 1st he was called to a hurried consultation in Jabez's room.

"All is up," said that worthy airily as Dodds entered the room. "The Omnibus Bank has suspended payment, and with that everything else goes down."

The Omnibus Bank, it should be explained, was the

institution which Jabez had created as a kind of pivot round which the other companies revolved. Suspicion might have been raised as to the condition of the Emancipator's business if its financing had been done through a public bank. To keep its transactions dark it was necessary to have a bank of their own. For this purpose the Omnibus was created; and for several years it fulfilled its purpose. But the pitcher that goes often to the well may be broken at last; and, under the continued stress and strain of withdrawals and the corresponding shrinkage of deposits, the Omnibus collapsed. There was no money left to meet its liabilities. Promises to pay, and all the financial expedients known to impecunious adventurers, had been used up long ago. The game was up, as Jabez said, and nothing remained but to put up the shutters.

"What is to be done?" said Dodds, relinquishing at last all hopes of the expected miracle.

"*Save qui peut*," said Jabez, smiling. "Good evening, gentlemen."

Next morning, when the clerks came to the offices of the Emancipator, they found the shutters up and the doors locked, and an intimation that business was suspended until further notice.

The crash long expected had come at last, and what a crash it was! The Omnibus Bank had been the first to go; it dragged down with it the Emancipator; and with the Emancipator came the Trust Company and the Estate Company. J. W. Dodds and Co. went, of course. In the general ruin, Oldman and Company, a firm built on Doddsian principles, and all the other allied companies, which were to be such a source of strength in buttressing up the central citadel, fell like a pack of cards. It was a crash indeed. Nothing like it had occurred in the world of small finance since the failure of the Glasgow Bank.

CHAPTER X.

THE MORTGAGE OF A LIFE.

THE press is a great institution no doubt. It does many things well. It does some things execrably. It overdoes certain regular old-established functions, it neglects altogether the new and unexpected. There are few places where it is more difficult to obtain recognition for anything new than in a newspaper office, especially a London newspaper office. The average London newspaper man is a good humdrum common-place creature, with a great weakness for rote and a wonderful lack of imagination.

Hence it came to pass that the crash of the Emancipator, in itself, and in its immediate and ulterior consequences, far more important than the loss of a pitched battle or the issue of a dozen bye-elections, received far less notice in the columns of the press than was given to the annual aquatic function at Henley, or to the electoral campaign of the Hon. Fitz Windbag: to say nothing of the stenographic report of the proceedings in the famous, or infamous, divorce case of my Lord Threestars, who subsequently married his mistress the ballet dancer. City editors live on *la haute finance* as editors-in-chief live on *la haute politique*. Hence they neither took the trouble to warn their readers beforehand of what was coming, nor when it came did they show any sign of appreciating its significance. It was an event to be mentioned and to be done with. It was one failure the more, worse than Barkers', worse even than Bottomley's of the Hansard Union—and that was the end of it.

They did not see that it was a portent. They did not realise the extent to which the Emancipator had cast its tentacles around the homes of the thrifty and industrious toilers in every part of the land, sucking them dry of their

savings, and leaving them penniless and hopeless to face starvation or the workhouse. They did not, and to this day do not, understand how it is that to hundreds of thousands of men and women 1892 is known not as the year of the General Election, but as the year of the great Emancipator crash. They did not see that in every town and nearly every village there were human hearts aching and little ones hungering because of the great failure which wrecked their all. And they still less failed to appreciate the severity of the blow which had been struck at that confidence which is the bond of society, and at that trust in the good faith of public men without which thrift is impossible.

When the *Victoria*, struck amidships by the *Camperdown*, heeled over and sank eighty fathoms deep off the Syrian coast, the dullest of press men could see the horror, the tragedy, and the pathos of the event. And British journalism—that great sounding-board of whatever is articulate and sensational—echoed and re-echoed the bruit of the naval disaster, until the purses of the public were unloosed and nearly £100,000 poured in to a relief fund which was hardly needed, less than three hundred of the drowned sailors having left wives or families dependent upon them for support. But when the Emancipator went down, carrying with it the carefully garnered savings of scores of thousands, who were left helpless and penniless in their old age, the press was almost silent. The *Westminster Gazette* and the *Daily Chronicle* alone showed any sign of having some appreciation of what it meant. The others treated the great failure as if it were a mere ordinary case in bankruptcy. As a result, although the distress which the crash occasioned was a hundred times as severe as that caused by the *Victoria* disaster, the public has only subscribed a beggarly pittance of £30,000 to the fund that needed it most, as against £100,000 poured into the fund which did not need it at all.

"What a sermon it is," said Dick to his chum Harold, "upon the saving virtue of sensationalism. Without sensationalism you can do nothing, not even succour the widow and the orphan."

Dick, who had recovered from his accident, had returned to Oxford without seeing Spencer again. He was spending the Long Vacation in hard study with a friend in a little cottage in Borrowdale when the crash occurred. They did not hear of it for a week and more after the fatal 2nd of September, a day memorable for the collapse of the two supreme shams of the century—the French Empire in 1870, and the Emancipator Building Society, exactly twenty-two years later.

They had the news at last, not from the newspapers, which they never read, but from the old cottager in whose place they were lodging. He had been a fine specimen of a Cambrian dalesman in his day, but he was now old and infirm. Usually reserved, holding himself aloof with a stately sort of pride from the young gentlemen to whom he let his rooms, he was courteous and helpful whenever they sought his counsel or asked him for information about

bird or beast or fish. At home among the hills from his childhood, he knew every crag and every dale in all the country between Ulleswater and Coniston. He and his wife—whom he had buried two years before—had reared a family of strapping sons and hardy daughters, who had long ago left their eyrie among the hills, and had gone off to make homes of their own in all parts of the world. One daughter, tall, lissom, and graceful, with a fine bloom on her sun-tanned skin, kept house for the old man, and attended to the lodgers. Old age and rheumatism had compelled him to give up the small holding which had formerly sufficed for his maintenance. He was now tranquilly ending his days under the shadow of the familiar hills, beneath the shelter of the old roof, where he had brought his bride in all the pride of youthful possession, some forty years before.

Dick had never asked how he lived, but had concluded

that in the days of his youth he had put by something for a rainy day. But about the middle of September, as he and Harold were tramping homeward wet and weary from a long day on Helvellyn, they were startled by a shrill whistle from the direction of the cottage. They could see in the gloaming Helen, the old man's daughter, standing on a hillock near the house, making vigorous signs to them to hasten their steps. Tired as they were, they still had enough strength to break into a run, which soon brought them to the cottage. Helen came running to meet them.

A glance at her beautiful face showed that she had been crying. "What has happened?" both cried, in a breath.

"It's father," she sobbed;

"he's had a stroke. I doubt he's dead. He's lying with his head on the Bible. Hurry! hurry!"

Dick ran forward and found the old man in the position in which Helen had said. He had fallen forward from the chair, and his grey head was lying upon the Bible. The forefinger of the right hand was resting on the verse, "Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal." In the other hand was the letter, whose arrival that morning had had such evil effects. Harold, who was on the heels of Dick, was a doctor's son, and before going to college had often gone visiting with his father, now whispered to Dick, "He's not dead, but I am afraid it is all up with him. A stroke of paralysis at his time of life is apt to prove fatal." They lifted him up tenderly and laid him in bed. But although he continued to live for several days, he never regained consciousness, and in less than a week he was dead.

"How did it happen?" Dick asked.

"I'll tell you all I know," said Helen. "This morning the postman brought him a letter. There must have been bad news in it, for when he read it he gave a kind of a groan. I looked at him curious like, and he said, 'Out of this, lass! I must be alone.'"

"I would have stayed with him, for there was a look on his face which I have not seen since mother died, but it only vexed him. So I went out and stopped just outside the

"WHAT HAS HAPPENED?" BOTH CRIED, IN A BREATH.

door. For a long time everything was quiet, then it seemed to me as if I heard a moaning sound, and then he got up and walked across the room, and I found that he had been to the bookshelf, got the family Bible, had brought it back, and opened it on the table and begun to read it. He was quiet for a long time, and I went about my household work, for it was nearly dinner-time. I got dinner ready and I went to call him. I found him on his knees, with his hands clasped across the open Bible. His eyes were closed, so that he did not see me come in, but he was muttering to himself, 'Our Father, who art in Heaven, thy will, not mine, be done.' He remained silent a long time, and I daren't so much as speak to him. But as dinner was getting cold I said to him, 'Father, won't you come?' He looked at me as if distraught, and then said, 'What is it?' I bade him come to dinner, and he followed me as biddable as a child, but when he came he couldn't eat, and once or twice I heard him mutter under his breath, 'My poor lassie, my poor lassie!' and all the while looking at me so tender-like, I could have cried. I durstn't ask him what had happened. After dinner I set him in the easy-chair by the fire, and he held my hand and said soft-like, 'My poor bairn! oh, my poor bairn, it has come to this! Three score years and more have I toiled and stinted myself and mine, and now it has come to this!' I didn't understand what he meant, any more than I do now. So I left him. About teatime I went in to bid him come to tea, and I found him quite speechless. He must have fallen over the table where he had been reading the Bible."

"What could have been the matter?" asked Dick.

"It's that letter," said Helen. "Where has it got to?"

It had dropped from her father's hand on the floor. She picked it up and handed it to the young men. As Dick read it he turned ashy pale. Recovering himself, he said, "Harold, a great misfortune has happened."

"What is it?" said Harold.

"Bring me a light and I will read the circular."

It was the circular addressed to all the depositors in the Emancipator Building Society, informing them of the state of affairs, and telling them that the business of the society would be wound up as quickly as possible. From the circular Dick gathered that the old man to whom it was addressed had no less than £600 deposited with the society.

"It can't be!" said Dick. "The Emancipator stopped payment! Why, I always thought it was as safe as the Bank of England."

"Do you mean that thing that Spencer was connected with?" said Harold.

"Yes," said Dick, colouring slightly, for the mention of that name reminded him of his high hopes and cruel disappointments. "The Emancipator was Mr. Spencer's creation. If it has suspended payment the consequences will be most

disastrous. This is but one case in thousands in which the savings of a lifetime will be swallowed up."

"No wonder," said Harold, compassionately, "that it broke the poor old fellow up. This is all, I suppose, that he had between him and the workhouse?"

"It is not only that. It is evident that he looked forward to this store as being a provision for Helen when he was taken," said Dick. "Now, if he should not recover, which seems very probable, the girl will be left to face the world alone and without a penny. Harold," said Dick impressively, "it is impossible for the imagination of mortal man to conceive the misery that this will cause. In my own town this news will be like an earthquake, shaking to their foundations half the houses in the place." And as he thought of his Aunt Sarah he sighed heavily, remembering how emphatically he had guaranteed the safety of the society, which she had distrusted, as it now proved with so much reason.

It was some time before he could really bring himself to realise that the Emancipator had really failed. Perhaps it was only some temporary embarrassment. He consoled Helen, assuring her that she would find her money safe enough after a while, when these temporary difficulties had been met. Meanwhile he arranged with Harold to go into Keswick next morning and get the papers, and see what had really happened. They had not, however, to wait until they got to Keswick. The next post brought a letter for Dick from his mother. It was very brief, and reported a meeting of the shareholders, which had been held immediately after the stoppage of the Emancipator.

From it he learned the truth. Dodds, his old host, and Speight, the solicitor, were under arrest. His quondam patron Spencer had fled the country. Judging from present appearances, it seemed extremely unlikely that any of the shareholders

would see their money again. It was all swallowed up in one hideous yawning vacuum. His mother's letter was brief and evidently written under a sense of considerable agitation. "My dear Dick," she said, "I think you had better come home as soon as you can. Father has been unwell for some time, and the distress of Aunt Sarah on learning the loss of her little store, together with the knowledge of the widespread misery and desolation which the failure has caused in his congregation, has preyed on his mind to such an extent that unless he rallies soon I am afraid he will not get over it. We are hoping and praying for the best. Aunt Sarah is distraught, and your father needs constant attendance. I have not time to write more at present. It does seem hard." The letter then abruptly broke off.

"Hard indeed," said Dick, "cruelly hard!"

He knew his father so well that his mother's letter gave him great alarm. She would not have written in that strain unless there was reason to fear the worst. He packed up

HE HAD FALLEN FORWARD, HIS GREY HEAD LYING UPON THE BIBLE.

his things, and leaving Harold to look after the dying man, he started homewards with a heavy heart. On the way he met a Baptist minister from North Wales. He was full of the disaster. All thought of politics, even the prospect of the impending disestablishment of the Church of England in Wales, faded into comparative insignificance.

"People don't realise it in England," the minister said mournfully. "There is hardly a person in my congregation who had any spare money who has not put it into the Emancipator. Our village is like the valley of Bochim. Thousands of pounds must have been lost in our township alone. However we shall get over it I don't know. It has taken all the life and joy out of the countryside. A gloomy Christmas we shall have this year, and no mistake."

After his companion left him Dick travelled alone for two hours chewing the cud of very bitter thoughts. Not a year had passed since his visit to Strawberry Hall. How bright the world had seemed to him then! How black it seemed to-day! All that had glittered so resplendently last Christmas had turned, like fairy gold, into withered leaves in his hands. His meditations were interrupted by the entry of an old woman, who had hardly taken her seat before she asked him whether he had any news about the Emancipator.

"Because," she said, "I had a little nest-egg, which our minister said would be safer if I put it into the Emancipator and gained interest on it. I had it in an old china basin in the cupboard, saving it up ever since I first went out to service, and many and many a ribbon and pleasure trip have I denied myself in order to put a little to my bank, as I used to call it. At last I had as much as £100, which I felt would stand me in good stead and save me from the Union in my old age. But my minister—good man that he is—said to me, 'Jane, why do you keep that money in the cupboard? It is a temptation to the robber; and, besides, it yields you no interest. Why do you not give it to me, and I will put it into a great society in London, where it will be as safe as the Bank, and they will give you £4 every year for the loan of your money?' 'Well, minister,' says I, 'I am mistrustful of those London folks. Do you think it will be quite safe?' 'Safe!' says he; 'why, I and all my friends have put all our spare savings into this society.' He said he knew the men at the head of it, and they were godly men, whose word was as good as their bond; and besides they had a great property, which would be a security for our little savings, and so I let him have it. Indeed, it was only last year that I consented, and now they tell me that it is all gone. But I can't believe it. Do you know," she said, looking at him imploringly, "do you know whether there is any truth in the story of the failure?"

It was hard for Dick to have to explain to her that it was all too true, and that she had very little chance of ever seeing her money again. When she realised that her little all was gone, her face became very fixed and white, but she said nothing until he had finished giving her what consolation he could, when she remarked, "My china basin in the cupboard was the safest bank after all." Then she subsided into silence, and soon after the train drew up at the junction where Dick had to take the branch line which went to his home.

The carriage was full of excited Welshmen, who were loud in their denunciations of the rogues who had drained the country of its money, and taken the hard-earned savings of the working man to squander in luxuries.

"Hang them!" said a black-bearded, narrow-chested fellow. "To think that such men could exist in a Christian country!"

"Hanging's too good for them," chimed in a stout, slovenly matron, who had evidently been seeking consola-

tion in the tap-room. "Hanging's too good for them; burn them alive, says I, and all their agents. Set of rogues!"

"They aren't the worst by a long chalk," growled a voice which Dick remembered having heard many years ago in the market-place, when the Secularists had been holding a demonstration to welcome Mr. Bradlaugh. "They are bad enough, no doubt; but what of the Christian ministers who acted as the agents of the swindling Emancipator, whose schools and chapels were used as collecting-houses for deposits to fill the hands of these scoundrels?"

"No," said a young workman, who was sitting opposite; "that is too bad. The ministers may have made a mistake, but no one can say that they did not make it honestly."

"Honestly, indeed!" snarled the other. "What do they care what becomes of the working man's money as long as they get their commission? It is a money-grabbing business from top to bottom. They make long prayers, but devour widows' houses. You see," he said, with a little laugh, "I can quote Scripture when it suits my turn."

Then they began to recount stories of their own losses or of the losses of their neighbours and friends. Dick was sick at heart. He saw how all this fierce indignation would affect the sensitive heart of his father. For such sentiments permeate the atmosphere, and no matter how well one may close the doors and windows, certain minds are as susceptible to the opinions of their fellow-men as the barometer is to the degree of moisture in the atmosphere.

When Dick arrived at home he found that his worst fears were more than realised.

"Oh, Dick!" said his mother, "I am thankful you have come. Your father is sinking, and I don't know if he will live through the night. He has asked for you once or twice, and was so relieved to hear that you were coming this evening. But get something to eat first, and then you may go in and see him. Prepare yourself, for he is very ill, and you will hardly know him."

Dick gulped down a cup of tea, and then he was ushered into the chamber of death. That such it was no one could doubt who saw the face of the old minister. Death was written on every feature. The face, indeed, already appeared to be dead, but for the light that gleamed in the eyes with a lustre that seemed hardly of this earth.

"Has Dick come?" the old man asked in a whisper.

"Yes, father," said Dick, his voice choking with suppressed tears, "I am here," and as he spoke he bent forward and reverently kissed his father's brow.

"I am glad you have come, Dick; I have something to say to you before I go."

"Yes, father," said the son, kneeling by his father's bedside and clasping his hand. He waited with bated breath for the parting words.

"Dick," said the old man, "it has come as I feared. From the first you know that I thought the Emancipator and those who managed it sought to make a gain out of godliness, and in their haste to be rich would not scruple to trample under foot the Kingdom of God. If I had only been faithful to the warnings of that instinct which bade me beware!"

The old man paused and sighed heavily. For a short time he seemed to be unable to speak.

"Oh, father," said Dick, "don't reproach yourself; you never had anything to do with the society."

"My son," said the old man solemnly, speaking with great difficulty and many pauses; "don't let us deceive ourselves. In a few hours, it may be minutes, I shall have to stand before the judgment seat of my Maker, and in His presence what avails it to make pretence that things are not as they are? If I had done my duty to the last as I did it at first, what misery and desolation would have been spared my

flock! I was an unfaithful steward. I allowed the use of my schoolroom for the meetings of the society; I uttered no word of warning that might have prevented much mischief, and now I go down to the grave with the curse of the widow, the orphan, and the foundling, for having failed in my duty. As a minister of Christ I should have been the adviser of the ignorant. I should have detected those wolves in sheep's clothing who wished only to ravage my flock. Woe is unto me! Woe! Woe!"

Dick was weeping silently, pressing his father's hand and longing to speak, and yet not knowing how to begin or what to say. The resolute will of the dying man, and his determination to deliver his soul before his lips were closed for ever, seemed to re-animate his failing energies and bid even

audible. Then the voice of the old man once more broke the silence.

"Dick, my son, promise —," his voice was almost choked, and his wife pressed to his lips the wine which alone seemed to sustain his sinking energies. After taking it he rested a few minutes, and then again addressed himself to his son.

"I wish you to mortgage your life to redeem your father's sin."

"But, father," said Dick impulsively, "it was no sin. You said little in favour of the Emancipator; you refused to do so over and over again, and now you hold yourself responsible for all the money which has been invested by your congregation! I admit that for some investments, as that of

"I WISH YOU TO MORTGAGE YOUR LIFE TO REDEEM YOUR FATHER'S SIN."

death to stand aside and wait until he gave permission to strike.

"My son, you are young and strong and have life before you. I give you as my dying charge the responsibility of making such reparation as is possible for your father's sin. As long as you live regard no pound that you earn as your own until you have paid to the uttermost farthing the interest due to all those who have lost their money in the Emancipator through my negligence."

The minister was failing fast. His breath came irregularly, and at times there was a gasp as if the end had come. For some moments there was a solemn silence, in which the ticking of the watch on the mantelpiece was distinctly

Aunt Sarah's, I am responsible, and whatever comes she shall not lose. But all the others—really, father, it is too much."

"Dick," said the old man tenderly, "I leave it to your own conscience to promise me that wherever you find any one who had put money into the Emancipator because of anything I may have done or have failed to have done, make that debt your own as you promise to make Aunt Sarah's."

Dick hesitated; but he could not refuse his father's dying request.

"I will, father—I promise," said Dick solemnly.

"God bless you, my boy—God bless you!" said the minister, placing his feeble hand upon the head of his first-

born. "Now, Dick, before I go, and I am going now where neither moth nor rust doth corrupt, or thief break through and steal, promise me one other thing, and I shall go hence feeling that I have done what I could to undo the evils for which I am responsible. You have genius; you will rise. You will have power in your grasp; use that power to alter the law so as to make this kind of thing impossible in the future." He paused for a time, and his efforts to speak produced only a faint whisper. Putting his ear close to his father's mouth Dick was able faintly to distinguish, "Read—the—68th—psalm."

His mother opened the Bible and read in a low clear voice the words which Cromwell's Ironsides chanted after they had driven before them in rabble rout Leslie's veterans at Dunbar: "Let God arise, let his enemies be scattered: let them also that hate him flee before him. As smoke is driven away, so drive them away: as wax melteth before the fire, so let the wicked perish at the presence of God." The minister raised his hand; the reader stopped; then collecting all his strength for one last supreme effort the old man raised himself from his pillow and said, "My son—my son, see to it that you do your part in scattering the enemies of the Lord, for the Father of the fatherless and the Judge of the widow is God in His holy habitation."

The last word was scarcely audible, and even as he pronounced it there was a short rattle in the throat, the eyes lost their gleaming lustre, and the head fell back on the pillow. The minister was dead.

They buried him quietly, making no display; but all amongst whom he had worked came to his funeral, and when around the open grave was raised the familiar hymn, there was not a dry eye in the vast concourse which crowded the cemetery.

The Sunday after the burial funeral sermons were preached in Ebenezer. They were solemn and impressive; nor will the memory of that day be speedily forgotten in the town by any of those who were present. But it was not the eloquence of the ministers who preached in the morning and evening, nor the rehearsal of the innumerable deeds of kindness with which the minister had made life beautiful, with a sweet graciousness which seemed to belong to another and higher sphere than this, that made so profound an impression. The incident which is riveted on the memory of all present in the chapel that day was that which took place at the close of the evening sermon. Frequently during the services the eyes of the congregation wandered with affectionate sympathy and compassion to the

minister's pew, where sat the minister's wife, now a widow, her eldest son, just attained to man's estate, and the rest of the family. Very pale they were, but bearing up bravely, feeling the presence of him who was gone and wishing to set an example of faith and fortitude to those who had lost less than they. A thrill of wonder and surprise ran through the congregation when, as the minister closed his book and

was about to give out the parting hymn, Dick slowly rose from the pew and made his way down the crowded aisle to the pulpit steps.

There was a silence so deep that each of Dick's footfalls was distinctly audible in every part of the building. The audience held its breath. Dick stood for a moment silent, as if fearing the effect of his own voice. His face seemed prematurely aged, haggard, and worn. Twice he tried to speak, but twice something seemed to choke in his voice, and he could not proceed. The third time he succeeded.

"Friends," he said, "friends and neighbours, I stand here to-night in obedience to the last wish of him whose voice you will hear no more from this pulpit." He paused for a while, and a great sob was audible in the church. Mrs. Grant was weeping silently. "My father," continued Dick, his voice trembling with suppressed emotion, "when he came near his end, was much oppressed with the thought of his failure, in one respect, in his duty to his flock. It is not for me, his son, to defend his reputation or to express any opinion on the judgment which he himself uttered upon his deathbed. As you have heard from the pulpit to-day, his last days were darkened by the horror of the great catastrophe which has overwhelmed so many in this community. To his sensitive conscience it seemed that he had failed in his duty in not maintaining to the end a firm front against those who sought to convert the house of God into a temple of Mammon. The wail of the widow made destitute and of the orphan left without a home, owing to the dishonesty of men who sought to make a gain of godliness, and who robbed widows' houses, while for pretence they made long prayers, was constantly before his

mind. He could not die in peace until he had made what reparation was possible to those who may have invested in the Emancipator through his supposed approval and support."

As Dick went on his voice gained in firmness, and it was now ringing through the large building, so that those in the farthest gallery could hear every syllable. When he

DICK STOOD FOR A MOMENT SILENT.

referred to his father's remorse a shuddering sort of dissent ran from pew to pew; but Dick was speaking too rapidly to brook interruption. When, however, he paused, before stating what his father wished him to do, a buzz of conversation that could not be repressed spread throughout the whole audience. No word was audible, simply a vague confused murmur as of bees in the hives, but it expressed amazement, incredulity, and indignation. Dick waited a moment for the murmur to subside, and then he proceeded:—

"My father"—and there was a ring of pride in the way in which he pronounced that word—"my father charged me with his dying breath to mortgage my life to pay the interest on all the money deposited in the Emancipator, placed there in consequence of anything he may have said, or of anything which he failed to say. In obedience to his dying request I therefore mortgage my life until the day of my death to pay to all those who have been led to invest their savings in the Emancipator, because of any countenance which my father appeared to have given to that society. And I will hold myself responsible to the uttermost farthing to keep up the payment of that interest, regarding the Emancipator's debt as my own."

This time the buzz of amazement and of dissent broke out again, and swelling louder found articulate utterance in muttered cries of "Too bad!" "Absurd!" "No, no!" "We won't have it!" Dick, with one quick wave of the hand and flash of his eye, silenced the crowd. "Who dares to call bad what my father thought good the last hour of his life before he went to meet his Maker?"

A cold chill seemed to run through the veins of those who

had spoken, and again there was a deep silence when Dick continued:—

"Therefore, all members of my father's church and congregation who have invested money in the Emancipator which they can honestly before God and man declare they would not have invested had they not had my father's countenance and approval in doing so, are invited to send in to me during the next fortnight statements regarding their investments, together with the reasons which led them to believe my father approved of the course which they have taken. And I, in the sight of God, and of those here assembled, and in fulfilment of the promise which I have made to him whose memory will ever be sacred in my heart, accept and assume all such debts as my own."

He paused and looked up at the minister to give out the closing hymn, but the minister sat with his face buried in his handkerchief, sobbing like a child. Another moment and the whole audience would have broken out in loud weeping, but Dick again lifted his voice, which rang like a clarion through the church. "Friends and neighbours," he said, "let us sing the Doxology:—Praise God from whom all blessings flow, Praise Him all creatures here below." As he uttered the last word the organ pealed forth the first note, and the great congregation rose to its feet and sang the familiar words in tears and sobs. When the last note had died away, the minister, with a choking voice, pronounced the benediction, and after a solemn pause the congregation broke up.

Dick made his way to the family pew. His mother looked up to him with a proud smile, and said softly, "I wish your father could have seen you to-night."

"Mother," said he, with a strange far-away look in his eyes, "do you think that he did not?"

PART II.—LADY SIDNEY NESTOR.

CHAPTER I.

A MODERN WOMAN.

LADY SIDNEY NESTOR, of whose sudden widowhood Richard Grant had learned from the newspaper sent him by Mr. Dodds, was a modern woman. She had inherited tendencies and capacities which could hardly fail under any circumstances to produce remarkable results. From

her mother's side she inherited a strain of the blood of Lady Hester Stanhope, which gave her, at times, a distaste for the trammels of civilisation and a longing to revert to the simplicity of her nomadic ancestors. On the other hand, her father, the Earl of Ireton, of Ireton Hall, was a scholar, a statesman, and a diplomatist, who inherited the traditions of the most indomitable and resolute of those champions of conscience and liberty who fought in the armies of the Commonwealth. Her mother died when she was an infant, leaving her the only child and heiress to the estates of the Iretons. Lady Sidney, who was named after Algernon Sidney, one of the hero-martyrs of liberty whom Lord Ireton held in honour, was brought up by tutors carefully chosen by her father for the purpose of developing her independence and self-reliance. "She will be lady of my domain some day," he said to the tutor who acted as his *alter ego* during his long absences from home. "She will have to administer my estates and fill my place when

I am gone. Educate her so that she may never feel that it was a disadvantage to have been born a woman; and so that she will never excuse herself from exertion by taking shelter under the disabilities of her sex. For her there are to be no disabilities." The tutor faithfully carried out his instructions, and from her childhood Lady Sidney grew up with as full and free a life as if she had been a boy.

But although nothing was forbidden her that would tend to develop her mental or physical capacities, she was

subjected to as iron a discipline as if she had been one of her great ancestor's Ironsides. "Don't coddle her," said her father on one occasion; "remember that more girls are spoiled by being humoured and deferred to because they are girls, than those who lose their way because of the ridiculous limitations imposed upon them by society. If a human being is to rule, that human being, whether man or woman, must first learn to obey." Lady Sidney, to do her justice,

took as kindly to the discipline as to the licence which she was permitted. As a result she grew up lithe, active, and graceful as the young red deer of Exmoor. By the time she was thirteen or fourteen she rode regularly to the hounds, and there were few riders at the meet who had a firmer seat in the saddle or a lighter hand on the bridle. A fine trout stream ran through the estate, and no youth of her own age was so expert with the rod as Lady Sidney. She was taught the use of firearms, but was never more than an indifferent shot. Still, on occasion, she could walk the stubble with a shooting party, and when she was fifteen she had a long day on the moors on the Twelfth, and came back to the lodge less fatigued than any of her companions.

Her physical development was much advanced by a companion chosen by Lord Ireton for his daughter, to the scandal of the neighbourhood. "Things have come to a pretty pass," said the dowager duchess who lived at the neighbouring castle of Blundrum,—

"things have come to a pretty pass when peers of the realm choose their daughters' companions from the circus."

Little Lill, whose appearance at the castle gave rise to these and other invidious remarks, was the daughter of a famous equestrian artiste who had been at one time the mistress of Lord Ireton's younger brother. When the lad was little more than twenty-one he had become infatuated with the pretty equestrienne. He followed her from place to place, and would have married her but for her romantic objection to allow him to sacrifice himself to a

LADY SIDNEY NESTOR.

WHEN THE MOON WAS FULL AND ALL IN THE CASTLE WERE ASLEEP, THEY WOULD STEAL DOWN TO THE STABLES, TAKE OUT THEIR FAVOURITE HORSES, AND RIDE OFF, WITH THEIR LONG HAIR STREAMING OUT BEHIND.

mere circus rider. "No," said she, "I love you too well for that. It is not for people like me to mate with lords." The result was that when Lill was born she had no legal father, and a railway accident shortly afterwards deprived her of the man who, had he lived, would have fondly cared for her. Her mother went back to the ring and brought up her daughter to her own profession. When the child was about twelve years old her mother was fatally injured by a fall from the trapeze. When she lay dying she sent for Lord Ireton, told him the story of her intimacy with his brother, handed him all Lord Algic's letters, and charged him to take care of Lill. Lord Ireton, who was extremely good-hearted, although a rather cynical man of the world, was touched by the story, and freely promised to take charge of Lill. It was this circumstance which led him to think that the child who was his own niece would be no unsuitable companion for his daughter. He had been impressed by the passionate grief of the girl as she clung to her mother in their last interview, and after the funeral he drove over to the lodgings and took her away.

His first impression was strengthened by what he saw of the child. With a magnificent physical development, trained to do almost everything in which her mother had excelled on the trapeze or on horseback, she was as loving-hearted and simple-minded a little thing as if she had never smelt sawdust or careered round the ring amid the applause of the spectators. So without more ado he carried her over to Ireton Hall and gave her to Lady Sidney as a companion. The two girls speedily became inseparable. No one knew anything of their relationship, least of all the girls themselves; but there was a strange resemblance between the two which led many who did not know them to suppose that they were sisters. They dressed alike, they studied together, and each made it a point to keep step with the other's accomplishments. Lill, ambidextrous and supple, with all the professional training of the athlete, was at first far ahead of Lady Sidney, whose gymnastic exercises were but a poor substitute for the hard work of the circus. But after a time, under Lill's tuition, Lady Sidney was able to hold her own.

The passion of both girls was riding. There was not a horse in the stables which they had not learned to ride and to master. They rode every day, and sometimes too at night. When the moon was full and all in the castle was asleep, they would steal down to the stables, take out their favourite horses, and ride off, with their long hair streaming out behind. Nor would they return until after a wild gallop over hill and dale. When first they began these nocturnal rides they nearly frightened a game-keeper to death. They were dressed in white, and as the night was warm and sultry they had nothing on their heads, and as they galloped, shoulder to shoulder, down the Fairy Glen, the keeper, who was lying in wait for poachers, swooned away with fright. He had seen, he said, the white sisters of the Fairy Glen, and he went about for some days firmly believing that his last hour was at hand. After a while, the wild little witches of Ireton became a familiar topic of conversation in the country-side. The Duchess of Blundrum, when the first rumour of these exploits reached her ears, felt it her duty to write a letter to Lord Ireton, warning him of the goings on at the Hall. "My dear Duchess," he wrote back, "don't distress yourself. It was your misfortune, like mine, to be born too early in the century to have the liberty she enjoys." Her Grace never forgave that allusion to her age.

When Lady Sidney was fifteen years of age her father was appointed one of Her Majesty's ambassadors abroad, and for the next six years Lady Sidney and Lill lived in the heart of one of the most fashionable centres of Europe. The exigencies of their position somewhat re-

strained their wild natures, but they kept up their riding and continued their studies. They were quick at languages, and soon found that diplomacy when the thunder-cloud was in the air, and war, like Damocles' sword, hung suspended over the nations, was even more exciting than fox-hunting. The girls learned shorthand, and acted as Lord Ireton's private secretaries. There was no secret of State to which they were not introduced. Lill, however, forgot everything as soon as she had written it out; not so Lady Sidney. Her interest in affairs, continually whetted by meeting the persons to whom the despatches referred or from whom they came, made her in the end an even more eager diplomatist than her father. At the Embassy Lady Sidney became the centre of a brilliant circle of the cleverest people in the city. Poets raved about her; she was the cause of at least three duels—which, however, did not end fatally. She had offers innumerable, but amidst it all she roved fancy free. Her life with her father was so full of interest, and her work was so important, that it seemed to be a miserable exchange to step down and be the wife of any of those who offered her their hand.

When she was twenty-one a great sorrow overtook her. Lill, her own Lill, who had been as a sister to her all these years, fell in love—madly and utterly—with a handsome artist, whose pictures had been much praised in that year's Academy. It was in vain that the more prudent Sidney urged every argument of reason and common-sense against Lill's indulging in this infatuation. The man was poor and nearly twice her age; and, besides, even if all obstacles were overcome, Lill could not marry him without leaving her, and that Lady Sidney argued, with the selfish insistence of love, could never, never be. Lill was very sad, cried a great deal, and ended one fine day by running off with the painter to Hungary, where he was busy painting a picture which was going to enable him to rank with Munkacz, as the foremost artist of Eastern lands. It was a great blow to Lady Sidney. Her father bit his lips and said nothing. He noticed, however, that Sidney seemed to pine in the absence of the girl with whom her life had hitherto been entwined.

Just after this a change of Ministries at home offered him an opportunity of resigning his post, and in three months, all preparations having been made and a successor being appointed, father and daughter started on a hunting tour, which began in the forests of Lithuania and ended among the remnants of the buffalo on the American prairies.

They climbed the highest peaks in the Caucasus; they shot pheasants in the oasis of Khiva, and black-horned sheep on the precipitous slopes of the Hindu Kush. Passing through the Pamirs, they reached Kashmir, from whence they made their way to India. After tiger-shooting and boar-sticking in India, they shot an elephant in Ceylon, and then made their way through Malaya to the French colonies, and from thence to China. From China they went to Japan, and then sailed for America. In those days the buffalo was still in the land, although the remnant of the vast herds was fast dwindling before the repeating rifle of the hunter. There was no part of the expedition which Lady Sidney enjoyed more than the months she spent in the tents of the Redskins, following the track of the buffalo. They were fortunate in falling in with a tribe which would have furnished more than one model for the ideal savage of Fenimore Cooper's romance. From this tribe, as she lived with them day after day, she learned many of the secrets of the hunter's lore; and, as one of the chiefs admiringly said, "If she had had the good fortune to be born in a wigwam she would have been the chief of a tribe." It was with regret that she tore herself away from the children of the wilderness, and once more prepared to take up her duties at Ireton Hall.

Hardly had she returned home than her second great misfortune befell her. Her father had not been long at home before he fell in love with an Italian countess, a queenly-

HE FELL IN LOVE WITH AN ITALIAN COUNTESS.

looking creature who had a genius for music, and whose artistic tastes coincided with his own. She at once fascinated him and soothed him. He felt more restful in her presence than under the pressure and constant stimulus of Lady Sidney's conversation. Lady Sidney was then twenty-three, bronzed with the suns of many climes, trained with the culture of the library, and of the court, and of the wilderness, and was in the full flush of youthful beauty. She shrank instinctively from the advent of this stranger. She was philosopher enough to recognise that as Lill had gone, so her father was going, and that it was in vain to strive against the inevitable. The fact that it affected her position as heiress did not at first occur to her. On the eve of the wedding she sought her father in his room and told him with breaking heart that in the new home there was no place for her. In vain he tried to reason with her; she was inexorable.

"No," said she, "I have been too near to you, and have shared your life too utterly for years for that woman"—she checked herself—"for your wife to regard me with anything but distrust and jealousy. As you have settled the Lodge upon me, would you let me make it my home at once?"

"But would you not stay here?" said he.

"Father," she said, "you have taught me never to use words that I do not mean. For your sake, for her sake, and for my own sake, the only course is for me to leave."

Thus it came to pass that when the Countess came home as bride, Lady Sidney established herself in the Lodge in the New Forest, and flung herself with an almost feverish earnestness into every form of life. She made her seat the centre of a brilliant circle of the younger people—those who were coming on, rather than those who had already arrived. It came to be a distinction to be in Lady Sidney's set. In the New Forest she was able to combine in a small way the interests of a court with the delights of the wilderness. One month her house would be filled with the cleverest people—authors, actors, artists, rising diplomatists—all the people, in short, who in the next twenty years would represent England

before the world, were there. The next month she would be alone, mastering foreign languages, keeping herself in touch with the times, and spending the rest of her day in fishing or in long solitary rides, which brought back at times faint remembrances of the glorious gallops which she and Lill used to have in the moonlight over the Welsh hills.

Many men worshipped her, but most men were afraid of her. One or two ventured to press their suit, but were firmly put back with an emphasis which was none the less decisive because of the extreme kindness of her words. Hence it came to be accepted as a foregone conclusion that Lady Sidney would never marry. Imagine then the surprise of all her set when one fine day it became known that she had accepted Mr. Valentine Nestor, a *chargé* at the American Embassy, concerning whom little or nothing was known in London society. How it precisely came about is not quite clear; but there seemed reason to believe that Lady Sidney, tiring of a life which, though brilliant and full of movement, failed to afford any satisfaction for the deeper instincts of her nature, was in a mood to consider favourably the suit of any eligible lover. At this psychological moment Mr. Nestor, whom she had met at the Embassy when she first came out, appeared on the scene. He was quiet and strong, with a great reserve both of strength and of emotion. He fell madly in love with her, against all the warnings of his friends proposed to her, and to his infinite delight, and no less infinite amazement, was accepted.

They were married quietly, and for the next few years Lady Sidney experienced the deep satisfaction which comes from a well-matched union. Their married life was not without storms, for she was much too strong a character to accept as law the will of her husband. He at first hardly realised how resolute and self-reliant a mate he had won. The process of mutual discovery was accompanied by many pitched battles, none the less real because they were always conducted under the forms of chivalrous warfare. But after a time they succeeded in drawing a frontier between their respective domains; a frontier which, though not scientific, represented the line which divided the minimum with which one could be content from the maximum which the other could yield.

They had both followed the course of the Russo-Turkish war with the keenest interest and sympathy. Mr. Nestor was an old friend of the principal of Robert College at Constantinople, and therefore took an almost personal interest in the struggle which was to result in the creation of a free and independent Bulgaria. Lady Sidney from of old was an advocate of the liberties of the south-eastern populations; and when the war broke out they transferred their residence to Constantinople, and devoted themselves to the service of the Bulgarian refugees. They had been married three years when their only child was born. At that time the Russian armies were still encamped in sight of the dome of St. Sofia, and General Skobelev was one of the first to call at the Robert College to inquire after the welfare of mother and child. Lady Sidney made a rapid recovery; and when the question arose as to what the infant should be called, she insisted upon naming it Nedelca, after the daughter of the Bulgarian refugee, Dragan Zankoff; so the child was christened Nedelca Sidney Nestor.

From that time down to the year 1892 Lady Sidney had devoted herself to her daughter. While still taking an occasional interest in the great movements of the outside world, her whole heart and soul were centred in her husband and child. It was in these days that she learned almost inadvertently that her husband was a millionaire.

"You never told me," she said to him reproachfully.

"Why should I?" he said. "You did not marry me for my millions."

Nestor, indeed, was indifferent to his money; it rather bored him than otherwise. On the death of his father he had inherited an enormous fortune, compared with which that of Monte Cristo was insignificant. The task of looking after it and of investing the income which he could not possibly use bored him extremely, but he went through it with the passionless regularity of a galley slave. He was a good man, strong, affectionate, and conscientious according to his lights, but without a particle of imagination or originality. During the eighteen years of their married life the more adventurous side of Lady Sidney's character hibernated. She seemed to have worn it out in her maidenhood. Although there were occasional glimpses of its return, she was to outward appearance a passionately affectionate wife, and the devoted head of an ideal English household.

It can easily be imagined what an effect the accident which abruptly closed her married life had upon her.

Mr. Nestor was buried in the little churchyard in the New Forest. A plain slab of marble marked his grave. On this were inscribed his name, the date of his death, and two sentences: "He was taken and I was left." "Our habitation is left unto us desolate."

After attending to the first sad duties of her bereavement, Lady Sidney sank into a torpor from which even the grief of her daughter failed to rouse her. She went about mechanically, as one suddenly blinded at mid-day feels his way along the well-known paths by force of custom. Her days were dark and dull; her nights were of almost unendurable agony. There was constantly weighing upon her an oppression which could be felt, a weight which she could not shake off, and which seemed to be stifling her. She could not weep, she could not rouse herself. The sun of her life had gone out, the spring of her existence had failed. Henceforth, she thought, there was nothing left but a dull, dead darkness till the end of her days. When her father came over to see her he was alarmed at her condition. He sent for the family physician, who, as soon as he had seen her, said that it was absolutely necessary for her to go

abroad. Travel, as Lord Ireton had said before, was the best anodyne excepting time. Lady Sidney received the doctor's order with the indifference of lethargy. She went to tell her daughter.

"We have to go abroad, dear," she said.

"Where?" said the girl, brightening as she looked up.

"I don't know; it is all the same to me," said Lady Sidney. "Where would you like to go?"

Nedelca's eyes flashed. "Oh, mother, let us go to Rome!"

"Why Rome, Nedelca?" said her mother.

"Oh, because I long to see it. There is a verse in 'Childe Harold' that has set me longing to go to Rome."

"What is it?" said her mother.

Nedelca found the book, and pointed to the verse:—

Oh, Rome! my country!
city of the soul!

The orphans of the heart
must turn to thee,
Lone mother of dead
empires! and control
In their shut breasts
their petty misery.

What are our woes and
sufferance? Come and
see

The cypress, hear the
owl, and plod your
way

O'er steps of broken
thrones and temples,
Ye!

Whose agonies are evils
of a day;

A world is at our feet
as fragile as our
clay.

The child looked up into her mother's face with a wistful air as Lady Sidney read these lines. A spasm of pain crossed her mother's face. She closed the book with a sigh.

"Do as you like, dear," said Lady Sidney. "Nothing can make any difference to me now."

So it came to pass that about the time that

Dick Grant was returning from the lakes to his father's deathbed, Lady Sidney and Nedelca were leaving the Lodge for the Eternal City.

NEDELCA WAS DELIGHTED WITH THE WIDE EXPANSE OF SEA AND SKY.

CHAPTER II.

LIGHT IN THE TOMBS.

LADY SIDNEY travelled as plain Mrs. Ireton. The incognito had the incalculable advantage of ridding us

possessor of all necessity to make or receive calls of obligation. They took with them their favourite horses, for riding was the only distraction which seemed to keep Lady Sidney from brooding over that hideous scene on the Embankment, when in saving another her lord had extinguished the light of her life before her eyes. Lady Sidney had no Christian hope to support her in her grief. So far as she was religious, it was the religion of the ancient Greek, crossed with the stoicism of the Red Indian. She did not say exactly with Professor Clifford:—"I feel the spring sunshine is poured from an empty heaven upon a soulless world, and the Great Companion is dead." But if she did not feel that the Great Companion was dead, He had removed Himself infinitely far from the children of men; and for her in this life it was as if He were not.

Mrs. Ireton's party started for Rome, travelling by way of Lucerne. They crossed from Dover to Ostend on a beautiful September day. The sea was like a lake, with hardly sufficient waves to make steps for the sunbeams. Nedelca was delighted with the wide expanse of sea and sky. Everything was new to her. The great merchantman with its snowy canvas; the swift passenger steamer with its wide wake of foam, and the innumerable brown sails of the fishing boats resting on the sea like the wings of great brown moths, all were infinitely interesting. But when a school of porpoises began to play round the vessel, she became quite excited to see the huge pigs of the sea wallowing in the trough of the waters. "Look, mother, look!" said she; "did you ever see such funny monsters, and how quick they go! Oh, see! there, one has jumped right out of the water."

Lady Sidney tried to conjure up a smile, feeling her daughter's liveliness a reproach to her own sombreness, but the smile would not come. Arriving at Ostend, they found the International Wagon Lit drawn up to receive them. Lady Sidney at once took her seat in the carriage, leaving Nedelca with the courier to watch with intense interest the operation of landing the horses. Great was her joy to recognise them as they were landed, and her presence somewhat reconciled them to the horse-car to which they were promptly consigned.

Early next morning they arrived at Lucerne, and Nedelca was so enchanted with the panorama of mountains which

surround the loveliest lake in Europe that her mother consented to remain a day or two. Avoiding the Schweizerhof and its fashionable crowd, Lady Sidney drove at once to the Balances, the oldest hotel in Lucerne, whose front overhangs the river, and which is much quieter than the hotels by the lake side. The horses also had the benefit of a rest. It was a glorious autumn day. Here and there the trees were beginning to flush into crimson, while the yellow foliage of others showed out in vivid contrast the evergreen of the darker masses of fir. The snow had been falling on the higher ranges, bringing out clear against the sky their rugged peaks. The air was delightfully fresh and bracing after the long railway journey. After they had bathed

and breakfasted, nothing would satisfy Nedelca but that they must at once go out upon the lake. The impetuosity of the girl, who had inherited much of her mother's vehemence and independence of character, infected Lady Sidney, who, in spite of herself, could hardly resist the contagious enthusiasm with which the child greeted each new revelation of the beauties of the lake. The next day they ascended the Rigi, and that night Lady Sidney slept better than she had done since her husband's death. Two days later they continued their way to Italy.

When they arrived at Rome, Lady Sidney went to the Hôtel de Russie et des Isles Britanniques. The reason she gave her daughter for this choice was that she had always believed in the Anglo-Russian alliance; but to herself she said it was because the hotel stands

between the garden of Messalina and the burial-place of Nero. Why the supreme types of male and female infamy attracted her she could not say. There are moods which are inexplicable, and to none more than to those who experience them. The windows of the hotel looked out over the garden which climbed the rugged side of the Pincian Hill. There was an almost tropical luxuriance about the foliage, and the pleasant plash of the fountain sounded a musical note, which fell on the ear with a sense of dreamy rest. Nedelca was soon at home in her new quarters, and by degrees the influence of the fresh scenes and the bright Italian skies imperceptibly alleviated Lady Sidney's gloom. Without Nedelca, however, her visit would have done her little good; for the girl's bright, restless curiosity compelled her mother at least to keep her body in perpetual motion, while her mind was

HE UTTERED A CRY OF AMAZEMENT
AND DROPPED THE TOOL.

continually exercised in endeavouring to answer her daughter's questions. They kept very much by themselves, and avoided places of public resort, excepting when these were deserted by the public. For instance, they never went to the Pincian Gardens at sunset, but always in the early morning, when they had the garden to themselves, and when they could hear, sweet as a seraph's song, the hymn of the nuns rising from the valley below. In the late afternoon they rode; the evening they spent in the hotel reading. It was Nedelca's delight between ten and eleven at night, before the hotel gates were shut, to steal out alone to the great obelisk which stands in the centre of the Piazza del Popolo, and look at the stars as they glittered and gleamed in the wonderful purple blue of the midnight sky. At first the girl did not take much interest in older Rome. She was more fascinated with the ruins of the city walls, with their mediæval reminiscences which brought to her mind stories of "Rienzi," the "Last of the Tribunes," and Garibaldi, the last of the heroes, as she used to think him; and many a time she got her mother to follow the course of the wall, repeopleing it with garrisons, that in the old days found in the wall a sure defence.

One morning Lady Sidney astonished her daughter by announcing that she was going to the catacombs, and that she was going alone. Nedelca noted with satisfaction the return of initiative. Since her father's death her mother had never expressed a wish to go anywhere or to do anything.

The excursion, however, nearly proved fatal. Accompanied by a Trappist monk, who acted as guide, Lady Sidney descended into the catacombs. As she left the warm sunshine and entered into the gigantic honeycomb of rifled graves she felt as if she were going down into the cold dark world which had engulfed all that she held dear. She wandered on and on through the old galleries, heedless of the remarks of her guide, her mind being filled with her own memories and with the one grave which was dearer to her than all the tombs of all the martyrs.

In the course of their wanderings they came upon another party, to which her guide instantly joined himself, trusting that she would also form part of the larger company. This did not suit Lady Sidney, who wished above all things to be alone, and to whom even the occasional remarks of the guide were distasteful. She seized, therefore, the first opportunity which offered itself of separating from the main body, and took a way of her own in order to be free from interference. The result was that before long she found herself alone without either companion or guide, and, to make matters worse, on turning a corner she accidentally thrust her candle against the opposite wall and it was extinguished.

She was in darkness, and did not know in which direction to turn. Horrible stories of travellers who had wandered alone in the catacombs until they had dropped dead of starvation rushed to her mind. She remained for some minutes motionless with terror, then raising her voice, she cried aloud for help. She heard the echo of the cry die away along the corridors to the right and left, but there was no answering response. Then she knew that she was indeed alone; nor was it likely that her guide would notice her absence from the party until he returned to the surface, if he did even then. Lady Sidney leant against the side of the gallery, sinking with terror. Then in the midst of the darkness, and partly on account of her dread, there came a curious gleam of light and hope. For the first time for many months she felt she wished to live. She never thought to have experienced that feeling again.

How long she stood there she did not know; but at last beginning to feel cold she walked round and round the

chamber. Desisting from this in sheer weariness, she dropped upon her knees and cried aloud in the agony of her soul, "Oh, God! if there be a God, who cares for such as me, deliver me from this grave and restore me to my child again, if only for his sake who has gone." It was the first prayer she had prayed for many years, nor was it so much a prayer as a despairing cry cast out into the infinite with little hope of any response. The mere act, however, of formulating a prayer brought back such floods of memories of the olden days, when she and Lill knelt in the old parish church of Ireton, that there surged upon her an uncontrollable flood of feeling, and there in the silent catacomb she wept. Her whole nature was shaken and convulsed with a passion which found vent in tears. She forgot where she was or what she had lost, and remembered only the far away past time. And she was as a child once more, sobbing at the feet of a compassionate Father who loved her, and cared for her, and would surely deliver her.

After a time, wearied with the very intensity of her emotion, she laid her head against the side of the gallery and closed her eyes. Suddenly she started. What was that? Surely it was something tapping, knocking, pecking at the wall of tufa not very far away. She listened, and this time there was no mistake. It was a stealthy sound; as of a small pickaxe being used down the small gallery to the left, some twenty or thirty yards away. A strange fear shot through her, but it gave way to the hope of deliverance. She groped her way in the direction of the noise. Presently it ceased, and her heart sank within her. She had already walked on further than the distance at which the tapping proceeded, when to her great joy she suddenly heard the same stealthy sound as of some one who was endeavouring to work undetected. Now it seemed to come from another gallery stretching at right angles to the one along which she had groped. She felt her way along the wall, and suddenly to her great joy she saw the glimmer of a light. It came from a candle fixed in a niche in the wall, and it threw its rays directly down upon a man who was working quietly at a hole which he had made in the wall of the catacomb. He was so busily engaged that he did not see her approach until she was close to him. Then suddenly catching sight of her he uttered a cry of amazement, and dropped the tool with which he had been working.

"I beg your pardon," said Lady Sidney, speaking in Italian, "I have lost my way. Could you lead me out?"

The person to whom she spoke evidently did not understand Italian, and greeted her with a stare. Then he said, "Excuse me, madam, but I do not understand Italian." He spoke with a strong American accent, and Lady Sidney at once saw that she was face to face with one of her husband's countrymen.

"Oh," she cried, "can you lead me out of this dreadful place?"

"I reckon I can, marm," said he; "and real glad I am to find a lady who can speak an intelligible language even down here in the bowels of the earth. But I would like to finish this little business which I have on hand, then I shall be very much at your service."

"By all means," said Lady Sidney, and the strange worker resumed his toil.

"Ha," he cried at last, "I thought I should get it!" and she saw him remove a round substance from the excavation which he had been making in the wall. Wrapping it carefully in a handkerchief, he put it in his coat tail pocket. Then he set to work to replace the earth which he had removed. "You will be surprised," he said, turning to Lady Sidney when he had finished the operation, "at what you see me doing; but it is all in the interests of science—"

science which, like necessity, has no laws excepting her own needs. But that I can explain to you afterwards, as I see you would rather be out of this place as soon as possible. Now," he said, "follow me." Then she saw that in his right hand he had a thin black thread. She followed him without remark; but, after having gone a long way he stopped, with a smothered exclamation. The thread had suddenly come to an end.

"Well, that beats everything! You see," he said, turning to Lady Sidney, apologetically, "it was part of my instructions to secure for the Ethnological Museum of Washington a specimen skull of a Christian martyr from the catacombs. I applied to the authorities, but they said that such a thing could not be had; every valuable skull had been sold to the highest bidder more than a hundred years since. I knew they were lying, they always do lie about martyrs," he said meditatively, "but as it would not have done to have told them so, my only course was to go prospecting on my own account. So to-day I came down with my assistant and a party who were doing the tombs in the usual way. When we came to a spot which I thought would very likely yield a good skull, I just dropped behind, giving my assistant a reel of thread, and sent him on with the rest of the party while I remained to dig for relics. As you saw, I succeeded, but the thread has given out at this corner, and which way to turn I am sure I don't know. If we are in here much longer my candle will burn out, and then we shall be in a pretty fix." He then began to look very carefully all round the place where the thread had so suddenly come to an end. To his great joy about two or three yards further on he found the thread again. It had apparently been subjected to a strain greater than it could bear, and had snapped. Taking up the clue they proceeded at a rapid pace, until to the intense relief of Lady Sidney they came to a glimmer of daylight.

"Now," said her conductor, "I am sorry to have to trouble you to do me a little service; but you see that holy skull of mine rather bags in my pocket, and it might excite the suspicion of the monk, who looked pretty smart. Then I should have had all my trouble in vain; and, what is more, I should probably get into considerable additional trouble with the authorities. Would you oblige me," he said, producing the handkerchief in which the skull was enveloped, "by hiding this under your dress? and, indeed, if you were to put it under your petticoat, so much the less risk of detection." Lady Sidney hardly knew whether to laugh or to be angry at this insolent request; but remembering that he had saved her from spending a night in the catacombs—if he had not rendered her an even greater service—she took the skull, and suspended it round her waist under her dress.

"That will do," said he; "I will not trouble you for that holy skull until we get clear out of this."

In a minute they were at the door, which was locked; but by a few loud blows they brought the monk, who was much surprised at seeing two persons emerge from below. He asked no questions, however, and, taking his fee, allowed them to make their way to the city unmolested.

"Now," said her strange companion, "as it may not suit you to part with that small parcel until you reach home I will give you my card; or, if you will give me yours, I will take the liberty of calling upon you."

Lady Sidney took his card, and read—

PROFESSOR GLOGOUL,
WASHINGTON, D.C.

Hôtel de Russie et des Îles Britanniques, Rome.

"Oh," she exclaimed, "we are staying at the same hotel, it seems. There will be no difficulty about delivering the parcel."

That night Professor Glogoul called at her ladyship's apartments, and introduced his assistant. "Mrs. Iretton," said he, "this is Dr. Jex, my assistant, but for whose aid we should probably have been in the catacombs to this hour." They stayed for half an hour, to the great delight of Nedelca, and even Lady Sidney could not but be amused at the quaint talk of the Professor, and his original observations on men and things. Hearing that they had not yet been to St. Peter's, he volunteered to accompany them.

"Oh, do, please," said Nedelca, not noticing the dubious look on her mother's face.

"I shall be delighted," replied the Professor. Lady Sidney resigned herself to her fate, and the next morning the whole party set off to inspect the greatest of all Christian temples. Nedelca, who had read so much about St. Peter's, and had so often seen the dome towering above all the other buildings of the Eternal City, was prepared to lose herself in admiration and in awe. The colonnade, with all its columns and figures, impressed her, as well as the distant view of the facade. But when she came nearer she gave a cry of disgust, and exclaimed—

"Is it not odious to see the Pope advertising himself right across St. Peter's!"

"Oh, I am glad you have noticed it, miss," said the Professor. "I used often to be sort of ashamed of the advertising genius of my countrymen until I came to Rome. Been to the Colosseum, miss?"

"Not yet," said Nedelca.

"Well, when you get there, you will think it was built by the Popes—how many of them I am sure I don't know—but here, there, and everywhere you will find inscriptions setting forth what they have done to it."

When they entered St. Peter's, the Professor expatiated on the dimensions of the building. "It's almost American," he said decisively, "almost American. Have you ever seen anything more magnificent than it in your life?" said he, appealing to Lady Sidney. "Of course," said he apologetically, "you have not been to Chicago, for I guess they are putting up some buildings for the Exhibition next year which will make even this masterpiece of Italian architecture look small. Is it not superb?"

"Well," said Lady Sidney, "it is too much like the Paris Opera House for me. It is huge, magnificent, call it what you please, but it lacks that element of awe such as you experience on entering the Cathedral of Cologne."

"Oh! by the bye," exclaimed the Professor in some dismay, "I believe I have left that holy skull on the table in my room. I must hurry back at once to the hotel, otherwise there is no knowing what the servants may do with it. Pray excuse me." So saying, to Lady Sidney's great relief he rushed away.

"Now, my dear," she said, "let us go into the Vatican Museum. It would have been quite too awful if he had accompanied us."

It was the first visit that Lady Sidney had paid to the Vatican. Afterwards she became a constant visitor, but she never strayed beyond the gallery of ancient sculpture. There was something in the calm cold aspect of the marble which pleased her. She would sit for hours before the Laocoon, that marble embodiment of the fate of the human race. In Laocoon and his sons struggling in vain against the coils of the huge serpents she saw the human race in the tentacles of heredity and custom. When her heart was sick and heavy with the unavailing struggle of the Laocoon, she would restore quiet to her spirit by pausing before the glorious Juno or some of the other divine or imperial matrons who embody for all time the majesty and calm of the ancient ideal of womanhood. But

her greatest joy was in the Apollo Belvedere, standing
radiant in eternal youth, the very incarnation of the spirit
of resistless might depicted
in imperishable beauty.

She sometimes thought
that Apollo might
have delivered
Laocoon, but

accepting the haggard tortured Christ as a substitute for
Apollo with the sunny radiance of immortal youth.

CHAPTER III.

KING SOLOMON'S CRYSTAL.

LADY SIDNEY was slowly but steadily regaining her hold
on life. Her physical health, the wide range of her interests,
and the two great inspiring forces of Youth in the person
of Nedelca, and of the Past in the ruins of the ancient city,
were gradually assuaging the dull deadening pain of her
bereavement. But still sometimes her life seemed to her a

Dead Sea apple, full of bitter ashes. At such times she
would not allow Nedelca to accompany her, but would ride
for hours and hours across the Campagna. That weird
and desolate expanse, a wilderness sown with bones—the
bones of men and the skeletons of dead cities—appealed to
her morbid mood. Mounted on her favourite horse, she
soon left the great city behind; but it was not until it sank
from view, and only the great dome was visible, that she
began to feel free from the trammels of civilisation. After
a time—especially when the sea breeze blew—the Stanhope
strain in her would assert itself, and she longed to lead a
nomad life once more with the Redskins of the Far West
or the wandering Kirghiz of the steppes. And it seemed
good to her that the Campagna, once crowded with busy
life, was now waste and desolate, a wilderness whose very
breath was malaria, in which no man could lie down and
sleep without waking in the morning with fever in his
veins. The ruins of the old aqueduct, which at one time
brought water from the Alban lake to the Imperial city,
was another object at which she would look for an hour at
a time with a certain exultant joy. They were great
builders, the Romans, but Nature is greater than they.
Year by year their works crumble—soon they will have
vanished away—while the wallflower, the vine, and the
wild grass, which were before Rome was, will flourish
when Rome has even ceased to be a memory of the past.
Sometimes, when late in the afternoon she would be
galloping home from Alba or from Tivoli, she would catch
the sulphurous steam which rises from the marshes, and
she inhaled it as incense to her gloomy mood.

It was one bright day in December, when she had had
a long ride through the Campagna, that she came upon a
gipsies' encampment. It was a much larger one than usual.
A score of horses were grazing by the wayside. Twice as
many tents were crowded round a larger tent in the centre,
which was evidently occupied by the chief of the tribe.
When Lady Sidney caught sight of the tents she involun-
tarily drew bridle. A passionate longing to live once more
under the free canopy of the heavens coursed through her
veins, and she looked and lingered so long that one of the
men advanced and courteously asked her to dismount and
enter the tent. Lady Sidney without a moment's reflection
leaped from her saddle and gave the horse into the charge
of one of the men standing near, then she followed her
guide into the tent. Coming in suddenly from the sunshine
outside, the tent seemed dark and gloomy, and it was some
little time before Lady Sidney could discern clearly the
objects in the interior. From the farther end of the tent
she heard herself addressed in a strange deep voice. On
looking in the direction from whence the voice proceeded
she saw an old woman sitting on a couch supported by a
pillow. The face was powerful and lined deeply in every
part. The eyes were bright and uncanny, and pierced as
if they were as sharp as a two-edged sword.

"You have come, fair Lady from beyond the Sea, for the
first time," said the sibyl. "You will go and you will
return again."

Lady Sidney looked somewhat bewildered. "Then you
were expecting me," she said.

"Since morning we have waited for your horse's steps;
but now you will go and come again. Fear not, there is
sorrow for us, aye, and blood in the air; but you will
return to the tents of my people."

"Thank you," said Lady Sidney, "but to-night I must
sleep in Rome, and not for me are the tents of your people,
however much I may long for them in my heart. I must
ride on."

"You must go," said the beldame, "but you will return
before the sun is an hour older in the heavens. No; I will

"YOU MUST GO," SAID THE BELDAME, "BUT YOU WILL RETURN."

not take leave," she added, and at a sign to her attendants Lady Sidney was conducted from the tent.

"The queen," said the man who held her horse and assisted her to mount—"the queen says you will come back, and what the queen says never fails."

Lady Sidney threw a silver piece to the man and cantered away, wondering at the strange speech of the gipsy queen. Another mile brought her from the hilly country to the dead level of the Campagna. Here and there the huge horned cattle were browsing, and far away over the plain she could see the little shelters behind which the natives lie in wait to shoot the small birds which form so large a part of their daily food. It always annoyed her to see this butchery of larks, and she shuddered as she saw in the distance the little puffs of white smoke which showed that some unwary songster had been lured within range of the death-darting gun. Suddenly her horse started and shied in a way which would have thrown a less experienced horsewoman; at the same instant a blinding flash, followed by a loud explosion, told her that a gun had been fired near the highway, and she was enveloped in the smoke. Reining her horse up, she looked round. To her horror she saw a man lying on the ground, bleeding and apparently senseless, still grasping his shattered firelock. Instantly dismounting, she approached the prostrate form. She saw in a moment that he was one of the same tribe whose tents she had just left. Part of the gun in bursting had struck the forehead, inflicting a long gash, from which the blood was pouring, and which had temporarily stunned him. There was no sign that the skull was injured. A moment's examination, however, convinced her that the real danger was not in the head but in the leg. The lower part of the gun had apparently been blown downwards and had fractured the leg, severing an artery from which the blood was spouting. Unless this could be stopped the man would bleed to death in a few minutes. Fortunately, thanks to her long experience in the hunting field and on the prairie, Lady Sidney knew exactly what to do. Untying the man's garter, she twisted it tightly round his leg, and then using the stock of her riding whip as an improvised but ready tourniquet, with its aid she was able perceptibly to reduce the loss of blood. Looking round she saw at no great distance a pool of brackish water, and thither without much difficulty she carried the man. The movement undid the tourniquet, and she had to make it fast again before she proceeded to wash the blood from the

temple and to bandage his wounded limb. Excepting the severed vein he was not seriously injured, but it was obviously impossible to leave him where he was. Her first thought was to ride to the gipsy encampment and seek help, but reflecting that in the interval the wound might break out afresh, she decided to lay him across the saddle of her horse and take him back to the tents, which were little more than a couple of miles off. The man, well dressed and in the prime of life, had not an ounce of superfluous flesh upon his body. She lifted him and laid him across the seat of her saddle. She was much

afraid that the motion of the horse would bring on a renewal of the bleeding; but the tourniquet, although rude, was efficient, and in a little more than an hour from her departure from the tents of the gipsies she reappeared with her wounded charge. The men came running towards her, and raised a wild wailing cry when they saw who it was that lay across the saddle. From their actions more than from their words she divined that the man was the son of the queen of the tribe with whom she had had so remarkable an interview. They lifted the man tenderly from the saddle, uttering exclamations of wonder and delight when

they saw the tourniquet, and conveyed him to his tent, while one of them went to tell his mother. In a few minutes he returned, saying that the queen wished to speak to the Lady from beyond the Sea. Lady Sidney followed him into the royal presence. The old beldame was sitting exactly in the same position as she had been before, nor was there any trace of emotion upon her weather-beaten much wrinkled face.

"You would not believe, fair Lady from beyond the Sea, when I told you you would return. As I said so it has come to pass: for us sorrow and blood, for you good. My son's life would have been even as the water which is poured out and cannot be gathered up again but for your help. You have saved the life of my son; deign to accept the gratitude of my tribe."

Lady Sidney bowed her head, but said nothing.

"Tis well. I have a message for you, fair Lady from beyond the Sea. You must know," continued the old lady, and as she spoke she seemed to dilate with a pride of possessing a power denied to other mortals—"you must know that to the queens of our tribe is given the gift of seeing things that are to be as if they had been. Yesterday morning, before the sun was an hour high in the sky, I saw you come and go again, and return bearing with you one of our people wounded and nigh unto death."

The old beldame paused, and Lady Sidney said, "But how could you see these things?"

"In my family," she replied, "there has been handed down from generation to generation the magic crystal of King Solomon. In that crystal it is permitted to the queen of our tribe to see the things that are to be as if they had already happened. But now I am nearing my end, and my tribe is already on its way bearing me, although still alive, to the burying-place where my bones shall rest with those of my ancestors."

"Well," said Lady Sidney, "have you seen anything about me in the crystal?"

"Yes," said the old dame; "and now you will see for yourself. Part of what I have seen I may reveal to you; part you must yourself discover."

"Well, what have you seen?" said Lady Sidney curiously.

"I have seen that you have come from the dark borders of the River of Death, but you are returning to the River of

ONE OF THE MEN ADVANCED AND COURTEOUSLY ASKED HER TO ENTER THE TENT.

Life, from which I am toiling with wearied step. What you have been is nothing to what you will be—

Queen of a realm that is to be,
But is not yet on land or sea."

"What do you mean?" said Lady Sidney:—

"Queen of a realm that is to be,
But is not yet on land or sea?"

"What I have spoken I have spoken," said the sibyl; "but what need of my speaking? Look in the crystal for yourself and read your destiny."

Then from a pocket in the handkerchief which crossed her bosom the queen carefully produced a fine crystal somewhat larger than a hen's egg. It was encased in a curious black pouch, on which were worked many letters in various kinds of coloured silk. It seemed as if it were of great antiquity, for beneath the present characters could be seen older ones worked by some ancient embroiderer.

"But how can I look at it, and how am I to use it?"

"Take the crystal partly out of the pouch, and let the clear light fall upon it, and watch."

"And what shall I see?" said Lady Sidney.

"Look, and see."

Lady Sidney, incredulously, but still impressed by the evident sincerity of the gipsy, did as she was bidden.

"I see nothing but the reflection of my own face," said Lady Sidney.

"Wait!" was the only answer.

She continued to look for some minutes. "I still see nothing," she said.

"Wait!" was again the only response.

"Now it is beginning to cloud over; there is a mist over the whole of the crystal." The old dame did not speak. Lady Sidney continued to look intently into the crystal globe.

"Now," said she, "the mist is dividing and drawing to either side, and in the middle of it I can see—oh, how strange!—I see a building, an ugly building, brick with stone facings, and a tower on either side; on one there flies the American flag, and on the other the English. But what it means I cannot tell. I have a distinct memory of seeing that building somewhere, and with it is connected a confused sense of pain, but that is all. Oh!" she cried, "it is all fading away. It is all misty again."

"Wait!" said the old sibyl, repeating once more her imperious monosyllable.

"It is dividing once more," said Lady Sidney. "How strange! I see myself seated at a table and holding in my hand something that looks like a book or a pamphlet. It is nearly square, and is closely printed. I have never had anything like it in my hand, and I do not recollect the place in which I am sitting. Now it is all fading away again."

"That will do," said the old dame. "You have seen what you know not now, but what you will know hereafter—

Queen of a realm that is to be,
But is not yet on land or sea.

You have seen your throne, and you have seen your sceptre. You do not understand at present, but before many moons have waxed and waned you will understand. Now, farewell, fair Lady from beyond the Sea! My web is spun, my work is done! Farewell, fair lady!"

Lady Sidney bowed, and then, leaving the tent, she mounted her horse, and throwing the gipsy groom a piece of gold, rode at a rapid pace along the Roman road.

CHAPTER IV.

A MYSTERIOUS CLUE.

LADY SIDNEY had a touch of malarial fever for several days after her adventure in the Campagna. But the physical inconvenience was more than compensated for by the increased interest which it had given her in life. Although it had only been a short experience of the life in which she had revelled for years, it seemed to have wiped away much of her morbid gloom. She told Nedelca everything that had happened excepting about the crystal. She herself did not think of it again, but the rhyming prophecy which the old dame had addressed to her kept running through her mind:—

Queen of a realm that is to be,
But is not yet on land or sea.

What could it mean? Had it any meaning at all? A realm that was not and yet was to be. What realm was that? A queen? Then, in the midst of her questioning, the words ran through her head again—

Queen of a realm that is to be,
But is not yet on land or sea,

until they almost possessed her. She could not get rid of them. They sounded in her ears, they hummed in her brain, and, do what she could, the more she tried to exorcise them the more they clung to her. At last the nuisance began to subside. Lady Sidney attributed their persistence to an obscure effect of the malaria.

On Christmas Eve the memories of the past came back to her with renewed force, and she hated herself for having begun to take an interest in life. It seemed a kind of treason to the memory of him with whom she had spent so many Christmases. Nedelca noticed the change, but was much too tactful to comment upon it.

"Don't let us sit up, mother," she said. "It is no use keeping Christmas Eve in an hotel. Let us go to bed, and see to-morrow how the Romans keep Christmas Day."

Her mother yielded to her suggestion and slept. She had been sleeping very well lately, and this Christmas Eve was no exception. Towards midnight she suddenly woke with the consciousness that some one was in the room. There, beside her bedside, exactly in the form in which he had lived and loved, stood her husband. There was a loving tender expression on his face, although with it was mingled a slight reproachful look. At first she could not believe her eyes, but a second glance showed that she was not mistaken. Then her heart almost stood still with fright.

"Valentine," she gasped, "is it really you?"

"Yes," he answered. "I have a message for you;" and then in the old voice, which was the old voice, although somewhat mellowed and with a far-away sound in it, she heard the words, "Go to-morrow to the English confessional in St. Peter's; there you will find the key to your future." Then, bowing slowly, he kissed her on her lips. There was nothing cold nor clammy about it—it was just as in the old days. The flood of memory which it set loose shook her whole frame and filled her eyes with tears, and before she could speak the form was gone.

When Nedelca came to wish her mother a happy Christmas she found her looking very pale and distressed.

"What is the matter, mother?" asked Nedelca.

"Nothing, darling. Only I have seen father again. But to-day we must go to St. Peter's to find out what it means."

"Have you seen father?" asked Nedelca, with awe.

"Yes, my love," said Lady Sidney, "but we will not speak of it now. Afterwards I will tell you."

That afternoon Lady Sidney and her daughter fared forth, filled with a sense of awe and wonder, to St. Peter's.

JA
SHE KNELT AND UTTERED A PRAYER FROM THE DEPTH OF HER HEART.

"Wait here," said Lady Sidney to her daughter when they entered the church, "while I go on."

On asking she was directed to the left transept, where without much difficulty she found the English confessional box among the eleven foreign boxes which form so conspicuous a feature of St. Peter's. She hesitated a moment. She had never been to confession in her life, and always had the utmost possible repugnance to confessing to a priest. However, having come so far she made up her mind to go through with it, and stepped in and knelt. As she knelt she uttered from the depth of her heart, "O God, if there be a God, show me what thou wouldst have me to do!"

"My daughter," said a voice close to her ear, "what is it that you would say to me?" The voice was that of an old man, full and mellow, with that hardly perceptible trace of the influence of time which resembles the first frost with which age silvers the hair. Then there flashed upon Lady Sidney the full sense of what she could not help feeling was the extreme absurdity of her position. She was not a Catholic, nor even a Christian, in the regular sense of the word, and here she was kneeling before a total stranger because of an apparition in which no one would believe, and of a vision in the crystal which seemed even more inexplicable. In the tumult of confusion occasioned by these reflections she was silent. The voice again addressed her from the other side of the partition: "My daughter, you have sought me. What is it that you wish?"

"I do not know," she stammered. "I can hardly tell you, it seems too ridiculous."

"Nothing is ridiculous," said the invisible speaker,

"which perturbs your life and destroys the peace of the soul." There was a kindly ring in the tone of the voice, which indeed sounded so very human that Lady Sidney suddenly decided to tell him everything.

She began: "I daresay you will think it absurd that I should come, especially when I tell you that I am a Protestant, and that I should not have come unless I did not think it was the wish of the dead." The priest was silent as she rehearsed her story succinctly and with the precision which characterised her narratives—for she had not written the *précis* of despatches and conversations for her father for years without acquiring a terse, vivid, and condensed style. She told of her husband's death and her own darkness and despair; of the visit to the gipsy; of the crystal; and finally of the apparition of her husband and of his directions. The priest listened in silence. Not a whisper nor a breath betrayed that behind that partition another human soul was thrilling with sympathy and wonder as the strange narrative proceeded. After she had described the directions she had received the previous night, Lady Sidney said, "That is why I am here. Now you know all; but why I have been sent here I know not, and cannot understand." When she ceased speaking there was silence. The priest on his side was praying silently, and Lady Sidney, having said what she had to say, knelt waiting. Presently the silence was broken by the deep full voice of the priest, saying, as if to himself, "There is nothing impossible to Him who spoke to His chosen people by visions and signs and wonders in the days of old. His hand is not shortened that He cannot save. Marvellous are His tender mercies, and His loving kindness is past finding out." Then, addressing Lady Sidney, he said, very tenderly, "My child, what do you believe?"

Resenting his attempt to catechise her, Lady Sidney answered somewhat defiantly, "I believe in nothing."

"That is impossible," said the priest; "faith of some kind you must have, for without faith you cannot live."

"No," said Lady Sidney, disliking to be preached at by an invisible priest behind a screen. "I don't believe in anything. I don't believe in God, and I don't believe in the devil. I don't believe in heaven, and I don't believe in hell. I don't believe in your church, and I don't believe in your Bible. I don't believe I have a soul, nor do I believe that the apparition that I saw was my husband, for all that seems to me to be too good to be true. I think that when the body dies the person dies, and there is an end of him for ever." She bit her lip to restrain the tears which were pressing their way from under her eyelids, and was preparing for a vehement censure of what she felt in her soul was a somewhat insincere blasphemy, when to her astonishment the same voice went on, "That matters nothing. I did not ask you what you did not believe. I ask you again, what do you believe?"

Then she said, "Do you mean to say that it matters nothing what I do not believe?"

"It matters everything what you believe; what does not matter is what you do not believe."

"Well, really," she said, "except——" and she checked herself, but continued, "Although I am afraid that you will think it is flippant, the only thing in which I believe is that 'two and two make four.'"

She was just going to apologise for the remark which she had uttered, feeling how unsuitable it was to quote Molière in the confessional box, when the voice from behind the partition said quickly and with an imperious ring in its

tone, "My daughter, it is enough. Live up to that and it will suffice. Peace be with you!"

Bewildered and piqued, Lady Sidney felt that the interview was at an end. She rose from her knees and regained her daughter. Nedelca saw in a moment that the interview had by no means ministered to her mother's satisfaction.

"Well?" said she anxiously.

"I think I have been fool," replied Lady Sidney shortly; "but I will tell you about it when I get home."

So saying, they entered the carriage and drove to the hotel.

CHAPTER V.

WANTED—A NEW ST. GEORGE!

On reaching the hotel Lady Sidney told Nedelca what had passed, and they spent a long time in discussing what it could mean. Such an obvious arithmetical fact to be the clue to a person's future life seemed absurd. At last they came to the conclusion that it was a hopeless mystery, into which it was vain for them to attempt to penetrate. As it was, she had not long to wait for an explanation of the enigma. Professor Glogoul, on New Year's day, gave a small dinner party in the hotel, to which he invited Lady Sidney and Nedelca. They excused themselves on the plea that they were not dining out, but promised to come in after dinner and pay a New Year's call. When they came in they found the Professor deep in a discussion with a gentleman, whom they afterwards found to be one of the officials concerned in the liquidation of the Emancipator Building Society. They came in quietly, exchanged greetings, and sat down to listen to the conversation. Lady Sidney was glad of anything that would lead her out of herself, and Nedelca always took a great interest in the Professor, who was so different from the ordinary mortals she met with in society.

"Madam," said the Professor, as he ensconced her in an easy-chair beside the fire, "here is Mr. Bruce fresh from London, where he has been engaged for the last three months in letting daylight into one of the most colossal swindles of modern times."

"I suppose," said Mr. Bruce, "I need not explain what the Emancipator was?"

"Oh yes, you need," said the Professor gaily; "if you don't, I will. The Emancipator, madam, is the sudden reappearance in England of the dragon which your St. George was supposed to have killed."

"And a very authentic dragon he is," said Mr. Bruce laughing. "But although we had the dragon, we had no St. George. It perished not by the valour of any chivalrous knight who slew the monster to protect the widow and the helpless, but simply because there was nothing more for him to eat. He devoured all the substance of those within reach, and then died of sheer lack of fresh victims."

"Of course," said Lady Sidney, "we have all heard about the Emancipator, but it did not differ much from other failures, did it?"

Mr. Bruce shook his head. "There has been nothing like it in England for many a long year," he said. "We have just made out a rough balance-sheet, from which it appears that the total loss of the Emancipator and the eight affiliated societies is over seven millions sterling, for the most part made up of the savings of the most thrifty of the working classes."

"Seven million pounds," said the Professor meditatively; "just think what that means! He is a lucky workman who is able to put by a shilling a week all the year round as provision for a rainy day. It represents thirty years

savings of one hundred thousand men all swallowed up by this huge dragon-vampire of our times."

"But," said Mr. Bruce, "no mere figuring gives any idea of the frightful misery which this failure has caused in every part of the land. I have just been telling the Professor some stories."

"I should just think he has, and utterly spoiled my Christmas dinner. That was a mistake," said the Professor, shaking his head; "Christmas dinner should not be spoiled, not even by sympathy. But how could we relish the good things before us when we knew that there were thousands of homes in England to-day whose inmates are looking forward to spending their next Christmas in the workhouse?"

"There have been some heartrending cases, madam," said Mr. Bruce—"heartrending cases. One of the saddest things about the victims of the crash is their age. There are any number of depositors over seventy, and some over eighty. They were living upon their interest many of them, and now that is gone. Many have died under the shock; some have lost their reason, and are now shut up in lunatic asylums; while others are groping helplessly, wearying out themselves in the search for work which will keep them from destitution. Trade is so bad that their chance of regaining a foothold among the wage-earning classes is very slight. Many and many a time, I can assure you, after a day's work I have felt as if I had been watching the wreck of a great emigrant ship, where there is no help for the unfortunate passengers who have been swept overboard by the waves or for those dropping by exposure or terror into a living grave."

"But has nothing been done to help them?" said Nedelca; "surely there has been some relief started for them, has there not?"

"About as much help," said Mr. Bruce, drily, "as a single lifeboat would be to the passengers of an Atlantic liner going down in mid-ocean. The relief fund amounts to £30,000, which would certainly not give a pound a head to all those who have lost their savings."

There was silence for a time, and the little company sat looking at the fire. Then Mr. Bruce broke the silence. "The worst thing about it," said he, "is the heartless cruelty which it has revealed. Apart from the deeds of Mr. Spencer and others awaiting trial, some of the things which were done almost surpass belief. What would you say, for instance, of a deacon who, by his emphatic assurance of the stability of the Emancipator, induced ministers and leading Nonconformists of his own acquaintance to put their money in the society; and then, hearing rumours of the coming crash, removed all his money without ever giving warning to those who had invested theirs on his representations? Over and over again we have come upon cases in which it is not an exaggeration to say that an Indian with his

scalping-knife and his tomahawk would be ashamed to do what these men,—nominally Christian, some of them professing high religious principles,—have done merely for the sake of the commission on the money which they were inducing their deluded victims to cast into the abyss."

"Come, come," said the Professor, "at this rate you will be making us share the delusion of those Calvinists, who first invented the doctrine of original sin and then set themselves to prove it by showing how heartless human beings could be. Do tell Mrs. Ireton of that young fellow in Wales; his conduct, at least, stands in welcome relief to the squalid mass of hypocrisy and fraud."

"Yes," said Mr. Bruce, "that is a very fine story. A young fellow—Grant, I believe they call him—who was carrying all before him at Oxford, has abandoned his career at the university and has taken a situation as tutor with Lord Studley in order to be able to pay the interest upon all sums lost to his father's congregation by the Emancipator."

"Surely," said Lady Sidney, "that is an extension of responsibility which no minister or minister's son could be expected to accept. The minister of religion cannot possibly insure the investments of his congregation."

"That is not it exactly. The lad's father was an extremely high principled man, and very sensitive. He had never said a word in favour of the Emancipator, but when he came to die his conscience smote him for not having been more vigilant in warning his flock against the society. And it was his dying wish that the son should accept responsibility for all interest on the sums which would not have been invested in the Emancipator excepting from the belief that the minister in question believed the Emancipator to be a sound investment."

"But," said Lady Sidney, "that was rather hard upon the boy."

"Yes," said Mr. Bruce, "so I thought. But he faced it like a man. He said that he would do anything that his father regarded necessary for the peace of his mind, and he has practically mortgaged his life for the payment of the interest, and, if possible, the capital of some £5,000."

"How noble!" cried Nedelca, clapping her hands; "that is really splendid!"

"But will he be able to pay the interest?" said Lady Sidney.

"Yes, I think he will, but he will have to pinch with a vengeance. The family have a little money of their own, and so he will be able to devote nearly all his salary to the payment of the £200 a year due to the depositors."

"One act of heroism like that," said Lady Sidney, "illuminates a very barren waste of selfishness and crime. But can nothing be done to prevent such frauds in the future or to secure the restitution of the plundered funds?"

"Restitution," said Mr. Bruce, shaking his head. "No. Something may be saved out of the wreck, perhaps, but very little. There is the Bembridge Estate, over which £1,000,000 has been sunk. It is a white elephant on their hands—I doubt if it will realise £30,000. But if any philanthropist cared to take it over and develop it for the benefit of the depositors, he could not only make a good thing for himself, but realise a handsome profit for the benefit of the victims which at present will be lost."

"Bembridge?" said Lady Sidney. "Nedelca, that is almost beside our place in the New Forest. We can see it from the turret in the Lodge."

Mr. Bruce went on, "There is another white elephant on our hands, and that is the building on the Embankment—you know it, Mrs. Ireton, just beside Cleopatra's Needle."

Lady Sidney's handsome features quivered slightly, but she answered calmly, "Yes, I know it."

"Well, there is that place, on which at least £700,000

has been spent. The Official Receiver has offered it to the County Council for £400,000, but I do not believe they will take it. It will cost £300,000 to complete it on the original plan. No, restitution is out of the question. We may save a little out of the wreck, but it will be very little."

"Yes," said Nedelca, "I am afraid that it is only too true. But cannot something be done to prevent such things occurring in the future? What is the use of the law and religion if it cannot be prevented? It is worse than Italian brigandage."

"Many things could be done by law," said Mr. Bruce, "but there is no party advantage to be got out of it, and so governments don't trouble themselves with it. If public opinion could only be roused to carry out those simple reforms which have been insisted upon time and again by the registrar of the friendly societies and others, an effectual check could be placed upon much of the swindling which we are discussing. As for religion—"

"As for religion," interrupted the Professor, who was standing with his back to the fire, and who was looking more weird and impressive than was his wont—"what has religion done except to afford a convenient mask behind which thieves could plunder with impunity? Religion!" said he—"I have been thinking a great deal about religion since I came to Rome. We are standing upon the soil that is made up of the remains of dead and decaying faiths. Go where you please, everywhere you are confronted with a ruined shrine of some forgotten God. In every direction the sky is pierced by spires and towers erected to saints innumerable whose very names are unknown in our new world beyond the sea. Yes, the Catholic faith is very beautiful, no doubt. It has more than a dozen saints for every day of the year, but it does not yet seem to have produced the saint that is wanted in our time."

"What saint is that?" said Nedelca timidly.

"There have been saints of all shapes and sizes," said the Professor, "since the days of the good man who owned that holy skull which we brought from the catacombs the other day, and which is now carefully mounted under that glass case. We have had saints who have founded religious orders each more fantastic than the other. We have had articles of faith piled upon articles of faith, and innumerable beliefs which no one can understand, and which therefore no one can really believe. We can get everything in Rome—thigh-bones of saints, and toe-nails of martyrs; infallible dogmas, brand-new with the stamp of infallibility; cardinals and bishops, monseigneurs and friars, and all the flummery and frippery of ecclesiastical millinery; but as for the St. George who will kill the dragon of our time—that saint is not kept in stock at the Vatican."

"Well," said Mr. Bruce, "suppose you got your St. George, what would you have him to do?"

"Do!" said the Professor. "Two things, and no more. He should found a new order and proclaim it in the place of the huge *omnium gatherum* of unbelievable beliefs; he should proclaim one article of faith, and it should be as clear, as short, and as universal as the watchword of Islam."

Nedelca, who had been listening with all her ears, never having seen the Professor in such an exalted mood, said, "What would be the Order that the new St. George would found?"

The Professor's voice softened, and he looked down kindly at the eager face below him, and said, "The Brotherhood of all who Love for the Service of all who Suffer."

"Well, that is not bad, Professor—not bad," said Mr. Bruce; "but to formulate your creed is not such an easy task."

"Yes it is," said the Professor; "I have it all spick and span."

"Proclaim it," said Bruce, mockingly; "proclaim it here on Christmas Day, 1892, in presence of this select company."

"Well," said the Professor, "you may make fun of it as you please; but I am still firm in my conviction that the one great doctrine which it is of all things necessary that men should hold to if they would be saved from the endless miseries of these financial disasters is——" and he paused.

"What?" said Lady Sidney.

"Two and two make four," said the Professor quietly

"TWO AND TWO MAKE FOUR," SAID THE PROFESSOR QUIETLY.

Lady Sidney started as if she had been stung.

"Mother!" exclaimed Nedelca.

"What is the matter, madam?" said Mr. Bruce.

"Nothing," said Lady Sidney; "but—I see now. Excuse me, Professor, but it is time that we were retiring."

After they left, Bruce remarked to the Professor, "What's up?"

Professor Glogoul, on whose face there still lingered some of the light of his exalted mood, smiled quietly and said, "Dunno; but I guess the new faith has made a convert on its first proclamation."

CHAPTER VI.

LADY SIDNEY'S CALL.

WHEN Lady Sidney and her daughter found themselves alone, Nedelca threw herself into her mother's arms, crying, "Mother, mother, is it not wonderful?" Lady Sidney did

not speak; her eyes dilated as if she saw a light through the gloom. She pressed her daughter to her breast, and said, "Oh, if it were true after all—after all! I was almost angry with myself for having believed that it might be true." Her thoughts, it was evident, were running not upon the meaning of the formula at all, but on the evidence she seemed to have had as to the reality of the permanence of her husband's personality, and, what to her was still more important, the possibility of communication with him whom she had loved so tenderly and had lost so soon. Nedelca, younger and more practical, was only thinking of the new brotherhood, with its striking formula. "Would it not be splendid, mother," she said, "if there could be a new Saint George! I am sure it is not because there is no need of him." Her mother, full of her own thoughts, did not answer, and the girl went on—"Mother, is the race of saints extinct nowadays, or is the saint only an ordinary human being who is used for some great end? Mother, do you hear me?"

Lady Sidney stooped down and kissed the bright face with the wistful eyes which looked up at her, and said, "What is it, dear?"

"I want to know what a saint is? Why cannot there be saints nowadays as in the olden time?"

Her mother replied, "A saint is a person who is altogether emptied of himself; who devotes his life, and all that is his, to the service of God."

"Don't men do that nowadays? And how can you serve God except by serving man? And why can we not have the St. George which Professor Glogoul was talking about? Oh! it would be splendid to see him ride out and slay such dragons and vampires as we have been hearing about this evening."

"I don't know, my child," said Lady Sidney. "I don't know. I suppose these people are raised up from time to time."

"But don't you think it was about time that they were raised up?" said the practical Nedelca. "I am sure when I heard all those stories of misery and fraud, I felt as if the saints would raise themselves up, and not wait to be raised."

There was silence for a time, and as Nedelca nestled close to her mother she could hear the beating of her heart—that great heart whose love to her was all that she knew of the love of God to man. Indeed, it is thus usually through a mother's love that man can realise the love of God for the race. Nedelca was passionately fond of her mother, nor was this surprising, for Lady Sidney possessed every faculty of heart and soul and of body that was likely to fascinate the imagination of a romantic girl. She knew all her mother's adventures before she was married, and often spent an idle hour following in imagination the dauntless huntress as she stalked the buffalo or tracked the grisly to his lair in the rocks. Her mother to her was Juno and Diana and the Virgin Mary all rolled into one—the sum of all human excellences and the embodiment of beauty and power. Her only idea of any Divine Being was that He was just like her mother *plus* omnipotence and omniscience. After remaining quiet for about ten minutes she suddenly clasped her mother tighter and heaved a long sigh.

"What is it, darling?" said her mother, raising her face to hers.

"Oh, mother," said Nedelca, "I have got an idea."

"What is it, child?" she asked.

"Oh, mother, why cannot you be the new St. George yourself? I am sure there is no one who could be a better St. George than yourself." The impetuosity of the young girl and the sudden outburst of the strange proposal were so unexpected that Lady Sidney hardly knew what to reply. At last she said, "I do not think I could, Nedelca."

"Why not?" said Nedelca. "You are strong, you are free, and you have all the money you want. And, oh, mother, you are so good!" And the girl climbing further upon her mother's knee, hid her face upon her neck and clung to her passionately.

"Come, my child," said Lady Sidney, "it is time we went to bed."

Next morning Lady Sidney rose early from a dream in which she had seen the crystal again. It was surprising how the story had seized upon an imagination usually so practical. She went over the details of the dream again, and once more saw the great building. "I know I have seen it somewhere," she said to herself. "There they are, the red bricks and the stone facings with the two flags, the English and the American, just as I saw it in the gipsy's tent, only on the other side of the roadway is Cleopatra's Needle." Hardly had she recognised it than she understood that it was the Emancipator building close to which the fatal accident had occurred. She could not help putting this together with what she had heard from Bruce last night about this white elephant which was in the hands of the Official Receiver, and in front of which her husband had met his death. What did it mean? She was puzzled, and could not help wishing that the crystal had been a little more explicit in its half-hints and obscure suggestions. Her eyes filled with tears, and when the mist cleared she saw on the wall before her the simple figure of a schoolboy's slate, on which were inscribed

2
2
—
4

"Two and two make four," she said. "It is strange how that perpetually keeps cropping up." While she

looked at the slate it faded away. She dressed, and at breakfast told Nedelca that the building which the gipsy said was to be her throne was the Emancipator building on the Embankment, in front of which her father had been killed.

"Mother," said Nedelca, "I believe you will be St. George after all."

Lady Sidney did not reply, as most women would have done, by remarking that she was only a woman, and therefore unable to perform the mission which her daughter so persistently pressed upon her. The whole of her training and her subsequent life had convinced her that there are few things that women cannot do as well as men, and that there are a good many things that a man cannot do which a woman can do with ease. To plead her sex as a disability was therefore one of the very last things that would have entered Lady Sidney's mind. But Lady Sidney could not see that any one could do it. In the olden times, when there was a dragon devastating the district, there was no question as to what ought to be done: it was all prescribed by tradition and by precedent. Your knight had to encase himself in invulnerable armour, arm himself with an enchanted sword, and, mounting his trusty steed, ride forth to the dragon's haunt. Then there was a more or less prolonged conflict, after which he slew the dragon amid the enthusiastic applause of the assembled multitude, who would otherwise have been devoured.

"OH, MOTHER, WHY CANNOT YOU BE THE NEW ST. GEORGE YOURSELF?"

But this new dragon of modern finance, with its loathly suckers and far-reaching tentacles—it was difficult to say how all the seven champions of Christendom combined could contend against such a monster. In many respects, however, she felt that she was better qualified for the task than any one else whom she knew. Her position was unique: she was absolutely free, there was no authority to control her or to interfere with her, and she could do exactly what she pleased. All her life had been a kind of preliminary training to qualify her to undertake any kind of work she wished. Physically she had a frame of iron and a constitution which seemed incapable of fatigue. Mentally she had

been trained in many schools, and most of all in the best school of the responsible exercise of public functions as her father's private secretary, and afterwards as the chataleine of a great estate. She had travelled far and wide and knew the world as few knew it, both in courts and camps, in the salons of cultured capitals, and in the wigwam of the Red Indian and the kibitka of the steppes. She knew personally almost every man and woman who counted for anything in Europe, from the reigning sovereigns of Europe down to the chief constables of Birmingham and Chicago. She was a little over forty, but with her splendid physique she seemed at least a dozen years younger. By nature fearless, by experience prudent, she had a quick

intuitive insight into human character, a good memory, and ready speech, and she also wielded a vigorous pen. In addition to all this she had undisputed control, not only of her own fortune, but also of her husband's millions. During her husband's life they had been a weariness rather than a pleasure to her, for they deprived her of many hours which he would otherwise have spent with her. In a dim kind of way she realised that these millions might represent a vast store of unrealised power; but it was only since the previous night that it dawned upon her that the lever she held in her hand might qualify her to undertake the task of which her daughter had dreamed. But she did not see how the thing might be done, nor how she ought to set about doing it. Granting that it would be an incalculable advantage to the world if one could band together all those who love for the service of those who suffer, how was she to set about realising that ideal? And unless something practical were done, the great doctrine of two and two making four would be as sterile as that other arithmetical problem involved in the disputes of the schoolmen concerning the number of angels who could dance on the point of a needle.

"But, my dear child," she said, "it is all very well to volunteer for the post of St. George. Where is my sword, and where is my armour, and above all where is my charger?"

Nedelca was silent for a short time, and then said somewhat timidly, "Do you not remember what you saw in the gipsy's tent?"

"Perfectly," said Lady Sidney. "I saw the building which I now recognise to be the Emancipator building on the Embankment."

"But the other one?" said Nedelca anxiously.

"I simply saw myself seated at a table with a magazine or paper in my hand."

"But what did the gipsy queen say before she died?" said Nedelca.

"She said, 'Behold your throne and your sceptre!'"

Queen of a realm that is to be,
But is not yet on land or sea."

"Yes," said Nedelca thoughtfully, "but I don't see the sceptre."

"Neither do I," said her mother.

"Well," said Nedelca, "as we have found out about the throne, perhaps we shall also find the meaning of the sceptre."

For some days nothing happened. Mother and daughter went out riding as usual, and often and long were the conversations they had over the mysterious message. Nedelca never wavered in her conviction that her mother was called to be the new St. George, and all the arguments used by Lady Sidney to prove that it was impossible, the little woman ingeniously turned into arguments in favour of her fixed idea. Her mother had appeared sometimes very sad after their conversations, whereat Nedelca marvelled. At last one day, after much affectionate coaxing, she timidly asked Lady Sidney why she was so sad when they talked about the new St. George.

"Because, darling," said Lady Sidney simply, "because the very idea of calling me a saint makes me feel my infinite unworthiness."

"Your unworthiness?" exclaimed Nedelca. "Why, you are the best woman that ever lived."

"Hush, child, hush!" said her mother, putting her hand over her daughter's mouth. "To be a saint, Nedelca, is not merely to be a servant of God; but to go forth in the strength of God, and—and—" Lady Sidney stopped embarrassed, not caring to finish the sentence.

Nedelca opened her large eyes wide and looked at her mother in amazement. "And is that why you are so sad?" asked she.

"Yes," said Lady Sidney, "I am not worthy; the work of a saint can only be done by those who have a strength which is not of this world—what orthodox believers would call divine strength."

"Well," said Nedelca, looking puzzled, "but why cannot you get divine strength the way the others do?"

"I don't know," said Lady Sidney; "they say that you can only get that strength by faith."

"Faith? Do you mean believing?"

"Yes."

"Well I never!" said Nedelca, emphatically, "well I never! Don't you believe?"

"I am afraid," said her mother in some embarrassment, "I am afraid—"

"Why, mother, you are strange!" said the girl. "Did you not tell the priest in St. Peter's that you did believe at least one thing—that two and two make four—and did he not tell you that that was enough if you lived up to it? Surely, if that is the faith which the world wants, and you believe that, you will get all the strength you want for the work just as much as any of the seven champions of Christendom."

Lady Sidney was silent; she had not seen it in that light before.

"Well, child, I will go back and ask the priest if you are right. But I always thought that what is called the grace of God was only given to those who believed in the doctrines of the Church."

"Did you, mother? Well, it never struck me in that light at all. For instance, do you think that when St. George went out to kill the dragon, that strength was given to him to hew off its head with a sharp sword because he believed in transubstantiation, or in justification by faith, or in any other doctrine of the Church? No; it seems to me," continued Nedelca, answering her own question—"it seems to me as plain as possible. There was the dragon destroying the land and killing the poor people. St. George believed that God wanted him to kill that dragon, and he went because he believed, and the grace of God was given to him because of his faith. Surely," she said, waxing quite eloquent in her argumentation—"surely there were millions of people who believed the doctrines, but that did not give them strength to kill the dragon. But the faith that brought him strength to kill the dragon was his belief that the dragon had to be killed, and that God wanted him to do it, and not faith in the other doctrines."

"Well, well, child," said her mother, "let us see what the priest says about it. He seemed to have the voice of a good man, and I was called to him in a strange way."

The next day found Lady Sidney once more in the English confessional box in St. Peter's.

"Well, my child, have you found the clue?" were the words which greeted her from behind the partition.

"Well, yes, partly—at least, I think I have. But I want to ask your advice on a matter of much moment to me."

"Well," said he, "tell me what it is."

"I remember when I was here before, and I told you that I did not believe anything excepting that 'two and two made four,' you said that that was enough if I lived up to it. But what I want to know, is that if I lived up to that belief without believing anything else that your Church teaches, is it possible that I could receive that strength or grace, or whatever you call it; which would enable me to do things such as the old saints did, which were beyond mortal strength, and were impossible without the help of God?"

"Yes," answered the firm voice, "yes. You say you believe that two and two make four. Live up to that, and endeavour to make that much at least of the revealed will of God operative in the world, and as you do His work you may count upon His strength. I do not say," he added after a pause, "that your faith is the sum of faith, or that because you believe that two and two make four you will be able to do all things, as the Apostle said he could through Christ who strengthened him. It is the first round of the ladder on which the feet must be planted firmly before one can ascend higher. Be sure that your feet are firmly planted on that step in the ladder, be faithful to that, and the Lord will lead you in His own good time and His own good way to a fuller knowledge of Himself. Peace be with you!"

She found Nedelca waiting for her outside the church.

"I could not wait until you came home," said that impetuous young lady. "Now, was I not right—was I not right? I am sure I was right!"

Her mother did not answer; but when they were half way home in the carriage her mother turned to Nedelca and said, "My dear child, how is it that you know more of these hidden things than your mother after all these years?"

"I do not know what you mean, mother," replied Nedelca; "but I believe more than you do, mother. You only believe that two and two make four. I believe in that; but I also believe in you, and I am sure that God will help you if you try to help His work."

CHAPTER VII.

NEDELCA SETS AN EXAMPLE.

ONE day Lady Sidney had gone to visit the Vatican museum, and Nedelca was left at the hotel. She was restless and uneasy, when suddenly she remembered that her mother had left her riding-whip at the inn where they had put up in one of their rides into the country. It occurred to her as a rather happy thought to go into the city and buy a new whip, and give it to her on her return. With Nedelca, there was never long between conceiving an idea and putting it into execution, so putting on her hat and mantle she sallied forth. She walked to a saddler's in the Via del Babuino. At first she thought she was not going to succeed in obtaining the article which she wanted. Some were too heavy and some too short, and none of them were of the kind her mother liked. Just as she was about to leave the shop and try elsewhere, the saddler stopped her and said, "Perhaps the Signora would not mind an antique."

"Let me see," said Nedelca, as she stood at the doorstep. The man went upstairs and soon returned with a whip, which Nedelca at once decided was the very thing she wanted. It was a very old whip, very flexible, with a curious ivory handle, and it tapered to the finest of points. The only doubt she had was whether it was not too slender. The end of it was almost like the tip of a fishing rod. The saddler, however, had no difficulty in proving that the whip in spite of its extreme tenuity was as strong and supple as steel. It was an antique, he said. It was very valuable, and had a history attached to it. It dated back to the days of the Borgias. It had last been used by one of the triumvirs who defended Rome against Napoleon. Not taking much notice of the historical associations of the curio, which she conjectured were dwelt upon rather to enhance the price than from their historical accuracy, Nedelca bought the whip and was about to return to the hotel. However, she thought she would go to the English Library at the corner of the Piazza de Spagni, and get a new novel to read. When she got to the piazza the light was failing fast, and she hastened past the statue of the Immaculate Conception to get a glimpse of the setting sun. She had hardly mounted the first three steps of the Scala, before her attention was arrested by a singularly beautiful woman, talking with a well dressed man who had the forehead of an artist and the lower jaw of a satyr. Instinctively noticing the shamefacedness of the woman, and noting at the same time her wonderful grace and beauty, she paused for a moment, long enough to hear that the conversation was taking place in English. Blushing at the thought of an appearance of eavesdropping, she hurried up the steps, only to find when she reached the summit that the rim of the setting sun had sunk beneath the horizon. Descending the steps, she found the artist's model, as she took her to be, still in conversation with the man; but now there was a flush of burning shame on her face and fierce anger in her eyes, which in no way seemed to disconcert the other, who continued to address her with easy familiarity which inspired Nedelca with an unconquerable repugnance. The man raised his voice rather. "Come, now, my pretty little woman," said he. "Come, I will double your price. It is but as all the others do." The woman did not reply, but, putting her hands before her face, she burst out into a passion of tears. She was evidently very poor; her dress was threadbare, and showed traces of many a darn. As she bowed her head upon her hands there was something in her gesture which reminded Nedelca of her mother. Without reflecting for a moment what danger she might be running, the impulsive girl sprang at once to the side of the weeping stranger, and said, "Can I help you? What is the matter?" The woman cast one sudden glance of surprise at Nedelca.

The man, however, was in no mood to see his prey carried off before his eyes in this fashion.

"It is none of your business, miss," he said; "that woman is coming with me."

"She is doing no such thing," said Nedelca. "Allow me to pass! Come with me," she said to the woman. With that she turned from him and walked down the stairs.

The man laughed scornfully, and stepping right in front of them, said, "You don't escape me so easily as that comes to. I will take you both, if you like, but one of you I will have, *coûte qui coûte*." With that he stretched forward his hand, and placed it familiarly upon the woman's shoulder. She shrank shuddering, as if she had been stung by a snake, but he did not release his grasp.

"Unhand her!" said Nedelca, haughtily, the wild blood leaping through her veins. "How dare you! Unhand her at once!" and Nedelca's hand clutched tightly the riding-whip which she had purchased for her mother.

"No, little miss, I won't," said he. "But I will give you a kiss for your pains, if you like." And so saying he bent forward to kiss her. Nedelca's face blanched as white as that of a corpse, and before another word was spoken a sharp swish was heard through the air, and the whip, lithe as a Toledo blade, smote the man full across the face. Nedelca had inherited no small portion of her mother's muscular development; she was an expert fencer, and her wrist was a wrist of steel. On this occasion she was roused out of herself by an overpowering passion. Had it killed him she would not have bated by one ounce the force of her blow. Leaving his hold of the woman, the man staggered backwards, missed his footing, and fell heavily down the stone stairs.

"Come!" said Nedelca beneath her breath. As she hurried down the stairs and past the man, who was struggling to his feet, she noticed, not without satisfaction, that the whip had cut right through the skin of the forehead, from which the blood was pouring and half blinding him, while across the rest of his face there was a livid mark, which would in all probability remain with him for the rest of his life. He showed no inclination to follow them, but made his way to the fountain to wash off the blood. Nedelca supported her companion down the Via del Babuino, taking no notice of the small knot of spectators who had been attracted by the fracas on the steps, and who remained to see the man wash his wound in the fountain. As soon as they entered the Via del Babuino, and a hurried glance round had convinced her that they were not being followed, Nedelca said, "Where shall I take you?"

"Take me home, take me home," moaned the poor woman. "The Via de Lavendari, on the other side of the Piazza del Popolo." They walked in silence down the street across the Piazza and entered the Via de Lavendari, and Nedelca's companion paused at the entrance of a lofty house close to the river. Several women were hanging about the door, and they heard an altercation going on in the interior. It was evidently a low house in a low district.

"Do you live here?" asked Nedelca.

"Yes," replied the woman; "my husband and I lodge here—if indeed he is still here," she added with a sigh. "I do not like to ask you to go up to our room."

"I will go up gladly," said Nedelca, with an effort, "if you will bring me down again."

"Certainly," said her companion.

They mounted the stairs. As they were going up they were met by a woman, apparently the landlord's wife.

"Look here," she said, "have you brought me the money? If not, out you go bag and baggage. Not another night shall you remain in this house."

The woman tried to pass her.

THE WHIP SMOTE THE MAN FULL ACROSS THE FACE. HE STAGGERED BACKWARDS, MISSED HIS FOOTING, AND FELL HEAVILY DOWN THE STONE STAIRS.

"Do you not see that I have some one with me?" said the stranger with some dignity.

"Some one with you or not," said the woman, "it is all the same to me. Pay or go!" But she left them.

After ascending some more steps Nedelca found herself in a small room just under the roof. There was no light, nor was there any fire; and it was not until her companion had struck a match and lit a small lamp that she perceived the dimensions or the condition of the room. It was not as high as a prison cell, and only twice as broad. In one corner on a heap of straw, upon which some sacking had been laid, she could discern a human figure.

Her companion cast an imploring glance at Nedelca and said, "Stop for a moment; I will go and speak to him. He is very ill, and sometimes he does not know what he is saying."

She went to the prostrate form, and, bending over it, touched his shoulders. Nedelca heard a deep drawn sigh,

"IS THAT YOU, LILL?" HE MOANED.

and then slowly, as with an effort, the man turned round, and Nedelca saw his face. There was something terrible in it. The hair, which was long, was an iron grey; the features were noble, but were so scarred with deep lines and wrinkles as to convey an expression of misery rather than majesty; the eyes were deep set and brilliant, the cheeks were sunken.

"Is that you, Lill?" he moaned. "A piece of bread and some wine for mercy's sake. I have not tasted anything to-day."

The woman answered nothing, but turned away lest her tears should fall upon the sick man's face.

Nedelca came forward, and, kneeling down beside him, said, "Yes, we have brought food and wine, and you shall have some immediately."

The man had sufficient possession of his faculties to see that he was being addressed by a stranger. "Who are you?" he asked.

"A friend," said Nedelca cheerfully.

Something in her voice seemed to recall his wandering faculties. Raising himself on his elbow he said, "Oh, you have come! You have come at last. Have I been dreaming? But no, you are here, and you have come to help us."

"He is often like this," said his wife, sobbing. "He sees the people he knew long ago, and lives again the happy old days."

But the man, still looking intently at Nedelca, said, "Lady Sidney, Lady Sidney, why have you been so long in coming to my poor Lill?"

Nedelca, puzzled and confused, did not reply.

The man's strength gave way, and he sank back on the palliase, murmuring, "I knew Lady Sidney would come. But where is Lill? Why does she not come?"

"How does he know my mother?" Nedelca asked.

The woman seized her hand. "Lady Sidney, Lady Sidney—is she your mother?"

"Yes," said Nedelca wonderingly. "Do you know her?"

"Know her?" said Lill bitterly, "know her? But I must go. My husband is starving—dying!" she cried excitedly.

"Let me lend you some money," said Nedelca, forcing a piece of gold into Lill's hand. "I will stay here till you come. Oh, do be quick!"

Lill needed no further bidding. She took Nedelca's hand and kissed it with passionate gratitude and hastened downstairs.

Nedelca was now alone with the sick man, and she began to think of the rashness of her adventure, and to wonder whether

her mother had returned to the hotel. Presently he turned over with an effort and said, "Lady Sidney, where is my Lill?"

Nedelca knelt down by his side. "She has gone to bring you some food," she said.

"Food!" said the man faintly; "it is too late. Oh, Lady Sidney," he said, stretching his hand towards her, which she took and held in both of hers—"Oh, Lady Sidney, why did you not come before? It has been a hard struggle. Lill, your own darling Lill, who loved no one in the world so much as you, until she loved me——" He stopped; he was speaking with difficulty, and it was evident that his last hour was approaching.

"If his wife would only come back!" thought poor Nedelca; "if he were to die while she is away, what should I do?"

"But," she said softly, humouring his delusion, "I could not come before; I did not know where you were."

"I knew you would; Lill always said you would forgive

her for leaving you. But she was proud, was Lill, and would not let me write to you in all our misery. When my eyes were strong all went well with us, for Lill loves me. But tell me——" and then he abruptly stopped.

Nedelca wished his wife would return.

"Tell me," continued the man, "how it is that you are so young? As young as when I saw you first, if, indeed, you are not younger. Lady Sidney, I am going; be good to your poor Lill." Once more his voice died away, and he closed his eyes. He still breathed, however, but it was with great relief that Nedelca heard Lill ascending the stairs. She entered with a bottle of wine and some food from the neighbouring restaurant.

"Oh, I am so glad you have come!" said Nedelca; "but I am afraid you are too late."

The joy which was on the woman's face as she entered changed in a moment. Setting the dish upon the floor, she took the bottle and a spoon and endeavoured to put a little wine between the lips of the sick man. He did not seem to swallow it; but his haggard features relaxed into a smile. The two women knelt beside him. Lill was praying, with difficulty restraining the deep labouring sobs which seemed to choke her, and Nedelca felt her eyes moisten with sympathy. Suddenly the dying man opened his eyes and said huskily—

"I knew you would come, Lady Sidney. Now all is well. Lill and Lady Sidney—together——" His eyes wandered from Nedelca to his wife. "Yes; together——," he continued. "Lady Sidney—take—care of Lill! Dear Lill!" he said, trying to clasp her hands. The effort was too much, his eyes closed, there was a hoarse little sob, then the artist was dead.

Nedelca was perplexed, only understanding half what the scene meant. Her companion had flung herself on the floor, and was sobbing convulsively. It was in vain that Nedelca tried to rouse her. She had neither eyes nor ears and no consciousness of external objects. Nedelca began to be uncomfortable. She could do nothing for her companion there. At all costs she must get back to the hotel and tell her mother what had happened. So she left the room quietly, went down the foul-smelling stairs, past the lounging ruffians on the landing, past the landlady, who was all smiles and curtsies, and out into the street at last. She ran rather than walked until she reached the hotel. Her mother, who had returned an hour ago, was rather uneasy.

"Where have you been, child?" she said, as Nedelca entered, looking pale and distraught.

"Oh, mother, I want you to come directly!" and she hurriedly told her mother what had happened.

Taking a carriage, Lady Sidney and her daughter drove at once to the house where Lill's husband lay dead. The unwonted event of a carriage stopping before such a house immediately attracted a small crowd of onlookers. Ordering the coachman to wait their return, Nedelca led her mother up to the garret. When they entered the place they were in complete darkness, the lamp having died out. Nedelca descended, and returned with another lamp. They found the food still untouched on the floor, and the wine untasted in the bottle. The artist lay as Nedelca had seen him die, with a wonderfully sweet smile on his face, which had smoothed out the wrinkles. But Lill was still on the floor, lying like one dead. Weakened by long privations and the miseries through which she had passed, her strength had given way under extreme physical exhaustion, and she lay motionless as the dead man on whose hand her cheek rested.

The presence of an emergency, bringing with it something to do, was a relief to Lady Sidney. She at once proceeded to restore the sufferer. Before she had quite

succeeded the undertaker arrived, and made arrangements for the removal of the body. Lill made no objection. Her eyes were open, and she had even swallowed a few mouthfuls of wine, but it was evident she knew nothing of what was going on around her.

She did not recognise Lady Sidney, and was lifted downstairs and into the carriage with difficulty. Nedelca looked on with curiosity and surprise at her mother's extreme agitation. Lady Sidney explained nothing until Lill was sleeping in her own bed at the hotel.

"Who is she?" exclaimed Nedelca. "Oh, mother, you are good, you are always good."

Then her mother said, "She is my foster-sister, of whom you have never heard me speak." Then clasping her daughter in her arms she told her the whole of the story, not without difficulty and frequent interruptions.

When she had finished Nedelca said, "And now, mother, what is to happen?"

"Child, do you need to ask? My old Lill has come again to be my sister now and for ever."

CHAPTER VIII.

DICK GRANT AGAIN.

THEY buried the artist in the English cemetery. Lady Sidney welcomed Lill back to her old place, but she was too crushed with sorrow and weakness to take much part in their life. By degrees they heard the whole story of Lill's married life. There had been some happy years, spent in the midst of love and art. But when her husband could no longer paint owing to the failure of his eyesight, they kept the household together for some time by selling his paintings. But at last this resource failed them, and worn out and broken, they had come to Rome, where Lill sought to earn a livelihood as an artist's model. She shrank from this for a long time; but at last, when they were on the verge of being turned out of their miserable lodgings for the want of ten lire, she had reluctantly and with much shamefacedness consented to take her stand on the *Scala di Spagni*. The regular models looked at her askance, nor did any one propose to hire her, until the man came whose insolence had led to Nedelca's interference. The story as she told it filled Lady Sidney's heart with a new sense of the miseries of poverty, especially the friendless poverty of women in great cities.

Nedelca had never told her mother of the part she had played in the encounter, but it came out in the course of Lill's story. Lady Sidney said nothing at the time, but that night, when Nedelca came to bid her good-night, she said, "My daughter, I am proud of you!"

"Why, mother?" said Nedelca.

"For the use you made of the riding-whip you gave me. That was a good deed well done."

Nedelca answered, "She was so helpless, mother, and so ill, and there was no one there but myself, I could not have done anything else."

That night, before Lady Sidney slept, her mind kept working a long time on the words of her daughter. Lill's was but one instance among thousands of girls educated as ladies suddenly reduced to crave the privilege of a livelihood of those who regarded their poverty as their opportunity. She could not help connecting the story of Lill with the fate of some of the victims of the Emancipator. Such failures precipitated into positions like that from which Nedelca had rescued Lill, hundreds, sometimes thousands, of women who would struggle helplessly and be washed down into the great abyss. Nedelca's words, "There was no one else there, and how could I help doing it?" seemed to ring as a direct, although unintentional,

reflection upon her own reluctance to draw the sword of St. George and go forth against the dragon of our time.

Meanwhile, life went on much as usual in visits to churches, ruins, and in riding excursions into the country. One day, Lady Sidney and Nedelca went into the splendid church of the Gesù, attracted by the beauty of the music, which is so very different both in compass and in volume from the stray notes of song that are lost in the bare expanse of St. Peter's. After the service was over, the two ladies went like every one else to the tomb of Ignatius Loyola. They found a small knot of Englishmen standing before the groups of sculpture on either side of the altar. Among them Lady Sidney was surprised to see Lord Studley, a young peer whom she had met in London. After a few words of greeting, Lord Studley volunteered to see the ladies to their hotel.

"Grant," said he to his companion, who was no other than Dick Grant, who had come with him as tutor to Rome, "I shall rejoin you in the Pincian Gardens at five."

Dick slightly bowed, and continued the conversation, in which he seemed absorbed, with an older man who was talking with somewhat of a Scotch accent about the founder of the Society of Jesus.

"I never liked Loyola," said Dick, "nor St. Dominic. St. Francis was much more the kind of saint one could love."

"Oh, but Loyola," said the stranger, whose name was Sterling, "was a great man—one of the greatest of modern men. He was the Napoleon of Catholicism, saving the Church as the Corsican saved France."

"Humph," said Dick, "I don't think much of that kind of salvation. The Church is like the Invalides, the splendid tomb of a splendid failure."

"All human things are failures," said Sterling, dogmatically. "*Humanum est errare*. What is that but to say that all men always fail?"

"Surely no," said Dick. "Some men completely succeed."

"Only when their object is extremely limited. You can completely succeed in filling a pig-trough with swill. You are certain to fail if you try to rebuild the City of God."

"Then," replied Grant, "had we not better limit our objective and succeed within a practicable range, rather than court failure by attempting too much?"

"No," said Sterling, "certainly not. Failure is a fool of a word. Loyola failed to achieve the tasks represented by these sculptured groups. He neither destroyed Paganism nor did he extirpate heresy. But he succeeded in doing more towards both than any other man of his time. Would to God," he added, "that we could have a new Loyola!"

"Why," said Dick, "is not Cecil Rhodes enough of a Loyola to serve your turn?"

"By no means. He is a Jesuit of the Empire, no doubt, who could found a great Society of Jesus, minus Jesus; but we want a Loyola in other spheres to launch the thunderbolts of destruction against pauperism and prostitution, against intemperance and slavery."

"It may be," said the younger man, moving away. "But if we must have a new saint, I would prefer St. Dominic, and I would limit his objective."

"To the burning of heretics?"

"No; to the merciless extirpation of dishonesty. That seems to me the supreme heresy of a commercial age."

Dick spoke with some bitterness. His companion, not knowing what it was that gave the edge to his tone, said: "In that case you must look for your saint, not in the churches, but in the press."

"Look for him, yes!" retorted Dick. "But find him, no!"

"I don't know," said Sterling. "I think Jackson, of the *Investors' Review*, might make a very fair financial St. Dominic if he had a free hand and a fair field."

"Saints don't want for fair fields," said Dick. "They usually prove their sainthood in Augean stables and pagan amphitheatres; and as for a free hand——!"

"Come! come!" said Sterling, "you are a tyro who is evidently ignorant of the first principles of English journalism, especially of the journalism that concerns itself with City articles. This church is chilly. You have to meet your friend in the Pincian?"

"Yes," said Grant, "we had better be moving. Did you see who carried him off? I was so busy discussing Loyola I did not notice."

"A couple of ladies," replied the other. "Mother and daughter, I should think. Old acquaintances of his, it seemed."

So saying they left the church and turned their faces to the Porto del Popolo. As they were going down the Corso they came upon the Professor, who was hurrying homeward.

"Dear me, Glogoul," said Sterling, "and you are in Rome? This is a surprise. I should have thought the neighbourhood of the Vatican was the very last place in which to find so uncompromising a devotee of modern science."

"Italy," said the Professor, "is the land of Lombroso and Mantegazza, as well as of Leo XIII. and Hildebrand. But who is our friend here?" he added in undertone, referring to Dick, who had fallen a few steps behind, and was looking in at a shop window.

"Really I hardly know," said Sterling. "I met him by chance when in the Colosseum the other day—my favourite haunt. He is doing tutor to Lord Studley. His name is Grant. A bright young fellow too, in his way. I have my eye on him for the staff of my new paper."

"Grant? Grant?" said the Professor. "I heard something about him the other day, and something very much to his credit. Oh yes! he was the young fellow who had to mortgage his life to pay the Emancipator interest to investors in his father's congregation."

"Oh, indeed," said Sterling, "that explains. But let me introduce you—Professor Glogoul, Mr. Grant. Mr. Grant, Professor Glogoul is an old friend of mine. An American scientist who will yet eclipse the fame of Lombroso and Pasteur."

"Glad to see you, sir," said the Professor, "and I hope that you are dedicating your life to something more profitable than archæology, either architectural or theological."

"I'm afraid," said Dick, "that I'm dedicating my life to the prosaic task of getting a living, and making a little money. I am not free to choose my vocation."

"If you were," said Sterling, glancing at Grant under his bushy eyebrows, "what would you be?"

"Public Prosecutor, I think," said Dick, "under the Bankruptcy Act, or anything that would help me to punish the scoundrels who rob and steal and swindle under the cover of business."

"Humph!" said Sterling. "I think you'd find a newspaper suit you best," he added with a laugh. "Glogoul will think it's a case of nothing like leather. But there is your friend."

Dick and Lord Studley had hardly disappeared when Nedelca came up. "Who is that young man?" she said to the Professor. "Is he a friend of yours?"

"No," said he; "but he is a pleasant young man, all the same. Would you like to know him?"

"I would not object," she said; "I somehow think I have seen him before."

"Possibly," said the Professor. "But I was seeking you, not to talk about young men—I wanted to ask whether you have been to the Colosseum."

She said that she had ridden past it many a time, but that somehow the opportunity had not occurred for making the moonlight visit which she had anticipated so long.

"Well," said the Professor, "I think it is about time that you went. The moon is full, and if your mother likes I shall be delighted to take you to the greatest advertisement board that was ever erected upon this planet."

"What do you mean, Professor?" said Nedelca.

"Well," said he, gazing down into the grave young face which was looking up into his, "well, I guess that is about right. The Colosseum, I take it, is the ruins of God Almighty's advertisement stand, which was built, I always say, expressly to advertise the Christian religion into existence. There would have been no Christendom but for that advertisement."

"Now, Professor," said Nedelca, "do be serious and talk soberly."

"I am speaking the words of truth and soberness," replied he. "The Colosseum was built by the Jews whom Titus brought over from Jerusalem, in order to allow the Christian religion a fair show."

"You funny man!" said Nedelca. "Was it allowing Christianity a fair show to throw the poor Christians to the lions, to be torn to pieces before a yelling multitude?"

"What fairer show could you want?" said the Professor quizzically. "Believe me when I tell you that Paul might have planted and Apollos watered; but if it had not been for that advertisement—a bigger thing," he said meditatively, "than Phineas P. Barnum ever invented—it would have been a bad hour for Christianity."

"I give you up!" exclaimed Nedelca. "Either I am too dull for anything, or you are mad!"

"Well, then," said the Professor, "I see I must take compassion upon you and teach you as if you were a school miss, and I your teacher. Now ask yourself, what was it that the world needed most to be convinced of when Christianity was born? and what was the world? The world for practical purposes consisted of the Roman Empire. To convince the world that a new Divine truth had come into existence it was necessary to bring it before the world, and to bring it before the world was to bring it before the Emperor, the senators, the generals, the proconsuls, and all the bosses of the Roman caucus who ran the Imperial machine. You could only get these here in Rome; therefore the first essential was that you should get your advertisement stand erected in Rome."

"Well?" said Nedelca, for the Professor had paused to take breath.

"Well," said he, "now that we have settled the place of the advertisement stand and its dimensions, we have next to consider what was the nature of the advertisement. Do you imagine that it was the preaching of Paul, or the apostolic mission of Peter, or the ethics of the Gospel which converted pagan Rome, wallowing in crime and blood and vice, as the hog wallows in the filth of his sty? All these things might have been, and would have produced as much impression upon Roman society as a tract upon a Bengal tiger. No! what converted Rome was the advertisement, constantly repeated with infinite variations, of the capacity of Christianity to work a miracle which had never been known before."

"What was that?" said Nedelca.

"You know the story of the man who said he had invented a bullet-proof armour, and came to the Duke of Wellington with his invention. It is an old story, but it shows what I mean. 'You say it will resist bullets at short range?' said the Duke. 'Certainly,' said the inventor. The Duke rang

a bell. When the orderly appeared he said, 'Order two soldiers from the guard-room, and tell them to load with ball cartridge. Now put your armour on, and we will have it tested,' he said, turning to the inventor. He continued his writing, and when the soldiers appeared the inventor was nowhere to be found. I am always reminded of the story," said the Professor, "when I look at the Colosseum. Christianity claimed to have invented an armour proof against the utmost ingenuity of devilish cruelty. They said that out of weakness it would manufacture strength, and out of cowardice the most undaunted bravery; and that it would so entirely revolutionise the whole nature of man, that not only would it exorcise the fear of death, but it would make him exult in martyrdom as the climax of human felicity. Claims so preposterous would have been scouted if they had not been tested by fact, not once or twice, but constantly, on the greatest stage in the world. Within those ruins which we shall see, softened by the moonlight to-night, the Duke of Wellington's rough practical test was applied. Again and again the masters of the world, first incredulous and then furious, exhausted their utmost resources in trying to disprove this new miracle of Christianity. The new religion did not slink away, but boldly accepted the test. That was the argument without which all the eloquence and zeal and piety of the early Christians would have been wasted. When people talk against *réclame* and advertisement, I often wonder," said the Professor, concluding with a sigh, "I often wonder where Christendom would have been to-day had it not been for that advertisement stand at the Colosseum."

"It is very strange," said Nedelca. "I never thought of it in that way before."

"If any good has to be done in this world you have to advertise, in different circumstances different methods; but it has been the advertisement of martyrdom which has been the saving of the Church. As for sensationalism, I guess my old friend Barnum never came within a thousand miles of the sensationalism of the method by which Christendom was advertised into existence. But go to your mother and ask her about to-night; I am going down to the Museum."

Lady Sidney readily consented to her daughter's request, and listened with much amusement to the Professor's glorification of advertisement. "I suppose there is something in it," she said. "But it seems to me that he rather ignored the difference between advertising yourself and your own wares, and being advertised by suffering through the malice of your enemies."

CHAPTER IX.

JASPER STERLING.

PUNCTUALLY at nine o'clock on the 30th of January, Professor Glogoul knocked at their door, in order to accompany them to the Colosseum. As they drove down the Corso, he said, "There is a beautiful moon to-night, and it is an auspicious day."

"Why auspicious?" asked Nedelca.

"It is the anniversary of the day on which subjects first taught kings that they had a crick in their necks."

After which the ladies and even the irrepressible Professor were silent until they reached the immense ruin which more than anything else symbols forth the immensity and the grandeur of Imperial Rome. Lady Sidney then intrusted Nedelca to the care of the Professor, while she herself sat down on one of the moss-grown stones and gave herself up to musing over memories of the past. It was a lovely night, and the moon, high enough to shine directly upon the arena, threw a flood of silvery light through the eastern arches of the immense building. For

above, stars were faintly seen in the great over-canopying dome. For from where Lady Sidney sat the sky itself appeared to roof in the arena, the whole dome of immensity seeming not inadequately to correspond to the vast mass of the Colosseum. At first Lady Sidney's thoughts were occupied not with the martyrs in the arena, but with the multitudes who crowded the stalls. Theosophists hold that the Romans of the Empire are being incarnated in the present day in the person of Englishmen of this generation. Without going so far, it is certain that no one familiar with the British Empire, and with the workings of the internal administration which stretches out its hands to the uttermost parts of the earth, can fail to have a very lively impression of the difficulties and strength of Imperial Rome. Those men and women in the boxes, seventeen centuries since, differed probably very little, as men and women go, from the brilliant throng of princes and nobles and high-placed officials who crowd our opera on a gala night. The Roman gave peace to Gaul and Dacia, and to distant Britain, and as a relaxation turned with zest to see slaves butchered in sport, and tender women and infants flung as living carrion to the beasts of prey. And now, where were they all? The men who built up the majestic fabric of the Roman Empire, who bequeathed to the world the imperishable heirloom of Roman law, and gave to the race ideals of civic ardour and imperial patriotism? Gone, in most cases so utterly that their very names have perished and their work is forgotten. A great sense of the vanity of all things weighed her down. In a little while she too would be gathered to her people, and the place which knew her now would know her no more for ever. Oppressed by this and other feelings she rose, and crossing the area, looked down upon the vast underground ruins which have now been laid bare by the pick of the excavator.

As she stood there she saw that a third person, whom she did not recognise, had joined Nedelca and Professor Glogoul. They were evidently coming towards her.

"Mrs. Ireton," said the Professor cheerily, "this is my friend Jasper Sterling. Never heard of him? Well, perhaps not. He is well worth knowing all the same, and I am delighted to be the means of making you acquainted. Mrs. Ireton—Jasper Sterling. Jasper Sterling—Mrs. Ireton."

Where Jasper stood the moonlight fell upon his face. He was not tall. He had a soft hat on his head. His eyes, she noticed, even in the moonlight had a strange scintillation which interested and attracted her.

"I am delighted to meet Mrs. Ireton," said Sterling, coming forward. "I have often heard of you from my friend the Professor."

Lady Sidney did not resent his evident intention to remain by her side.

"This is your first visit to the Colosseum?"

"Yes," said Lady Sidney, "my first, and probably my last. The place oppresses me; even the weeds which rustle in the evening breeze seem to whisper: Vanity of vanities, all is vanity."

"Really," said Sterling, "I do not see it in that light at all. It seems to me to be the ruin of the most gigantic of all the candlesticks which ever held the light of the world."

"What stories these old stones could tell if they only could speak!" said Lady Sidney.

"If!" said Sterling. "Then you do not seem to be acquainted with psychometry."

"I never heard the word before," said Lady Sidney.

"Psychometry," said Sterling, "is the name given to the fact which has been discovered in comparatively recent years that any object which has been within sight or sound, as it may be called, of any scene is capable of reproducing

to persons gifted with a sensitive sixth sense the scene or scenes which it heard or witnessed in the past."

"Really," said Lady Sidney somewhat incredulously, although her own experience with the crystal checked the scornful derision with which she would previously have treated such an assertion.

"I remember," said he, "a friend of mine had a very old crucifix which being placed on the brow of one of these sensitives caused him to see immediately such an arena as that in which we are standing now. There was a huddled crowd of men and women and children waiting for the doors of the cages to be opened. The roar of the beasts could be heard through the building. He saw a young matron in the arena give this crucifix to one of the keepers, who in return promised to see to it that the infant in her arms should be slain without preliminary torture. As the sensitive was speaking the bars of the cages were withdrawn, and the furious animals rushed upon their prey. Then the keeper who had received the woman's crucifix, took her child and thrust its head into the open jaws of a tiger. The mother thanked him as she died."

"Do you really mean to say that that happened?"

"Certainly, that is what he said he saw," replied Sterling. "I know both the sensitive and the person to whom the cross belonged, and the scene was described exactly as I have given it."

"It is a terrible thought that even the stones have ears, and not ears only, but tongues to speak."

"Yes," said Sterling; "that which is done in the secret chamber will be proclaimed on the housetops, and all secrets will be revealed. The world is but a huge palimpsest written over and over again with photographic and phonographic inscriptions which, when the time comes, will give up what they have seen and heard."

"But that only makes this place the more depressing," said Lady Sidney. "I suppose to your sensitive the whole space between these walls echoed with the cries of the dying or the still more horrible yells of the populace blind to all but blood."

"Yes," said he. "But do you not think that the heroic spectacle of Telemachus the monk more than redeems the memory of these centuries of clotted crime? To me it is a constant inspiration to think of the immense dynamic force which lies latent in one man's heroic act. He died, no doubt, but he would not have succeeded if he had lived. In his death he triumphed. It is the only way," said he simply, "that some things can be done in this world. You have got to get yourself killed; nothing else seems sometimes to convince people." He said this quietly, as if he were stating a truism.

"Come," said Lady Sidney, "in spite of Telemachus I want to go back to the hotel." When they got outside, they found, to their disgust, that their carriages had driven off. It was then late.

"If it is not too much for you," said the Professor, "I think we could not do better than walk home. The moonlight is beautiful, and the city is perfectly safe."

"By all means," said Lady Sidney; and taking the proffered arm of Jasper, they walked away from what seemed in the moonlight a spectral skeleton of a dead empire.

"I sometimes wish," said Lady Sidney, as they passed the Arch of Titus and went towards the Forum, "I sometimes wish that I had been born in an age when such heroism was possible. There were heroes in the world in those days; but it now it seems as if we were but a pigmy breed."

"I do not agree with you," said Sterling quickly, as if under his breath. They walked on in silence a little way. The moon was flooding the Forum with silver. They had

paused for a time to admire the scene, resplendent as it was in natural beauty, and far more wonderful for the memories which clustered thick about its crumbling stones.

"Would that I had been born then," sighed Lady Sidney, "when heroism was not a by-word, and patriotism was a reality, and when from this mystic centre the principle of justice went forth to the uttermost isles of the seas."

"I think you are quite wrong," said Sterling, laconically. He was often abrupt. Lady Sidney looked at him curiously.

"Wrong in what?" she said.

"Wrong," said he—"wrong in perspective, wrong in fact, wrong with a wrongness that cannot be described. Wrong in perspective, for instance. You, who are English, and a woman who lives at the dawn of woman's emancipation, to go back to the beggarly elements of ancient Rome, where the very idea of woman's citizenship was unknown, and where even the republic was a selfish oligarchy maintained by terrorism and supported by war. That is bad enough. But you, who come, I suppose, from London, you who live in the heart of an empire compared with which all the vast dominion of Rome was but a province——" He stopped. "I am afraid I have no patience to talk to those who are blind to their own inheritance, and we had better change the subject."

"By no means," said Lady Sidney. "It interests me to find some one who believes in England as the men who built the Capitol believed in Rome. But of old there was some scope for individuality. The hero stood out from among his fellows and lived his life and did his deeds, and made his mark upon the world. Nowadays in the dead level of democracy what chance is there for any one to make his mark in the world? or to influence to any appreciable extent the lives of the teeming millions around him?"

"Madam," said Sterling, "you amaze me. I do not think that there ever was a time since civilisation began that men's minds were more subject to the impact of new ideas than in England at this present moment. The old civilisation of which you speak with regret was stereotyped and fossil. In the English-speaking nations everything is in the crucible—laws, manners, customs, everything; and yet you speak as if there were nothing to be done."

"Well, but what could be done? Take my own case for instance. I am anxious to do something to serve my generation; I have not genius, but I have a certain position, and I have more money than I know what to do with."

Sterling looked at her, and then said, "Say that again!"

Lady Sidney rather resented his brusque manner, but she repeated that she was anxious to do some good to her fellow-men, and that she had more money than she knew what to do with.

Sterling's manner changed. "Tell me; you say you have more money than you know what to do with. Will you pardon me asking you a very straight question? If you saw a clear chance of doing good and realising your aspirations, could you afford to throw a million of money into the sea?"

"I don't exactly see the use of throwing a million of money into the sea, but if the cause were worthy of it, I should not miss the money much."

"And you," he said with unutterable scorn in his voice, "an Englishwoman, who could afford to throw a million of money into the sea to realise your ambition and to do good to your fellow-men, you sit here groaning over these miserable Romans, while you have in your hand a potential sceptre which would make you queen of a world immeasurably vaster than the Roman imagination ever conceived! Yes; queen of a realm that is not as yet bodied forth into material existence, but which might be if your faith were

equal to your wealth. The English-speaking world, once unified by a common faith and inspired by a common ideal, would form a realm the like of which has never yet been seen on land or sea. What woman in ancient times had such a chance? Zenobia, queen of the desert city, among the most pathetic of all crowned heroines of history, who was brought captive to this very city by the Roman conqueror, was but as a May queen of a village green compared with the grandeur of the rôle which you might play, and yet——" He broke off abruptly. "It is sickening to see such a sublime opportunity passing away."

"Well," she said, humouring him, "what would you do in my place?"

"I would do what I believe the Apostle Paul would have done if he had lived in our generation."

"What is that? Found a church, I suppose?" said Lady Sidney, shrugging her shoulders.

"No," said he, "the day for that has gone by. He would have found a newspaper."

"Yes," said she, with a sigh, "being a journalist you think journalism is everything."

"There is nothing like journalism. There is no more powerful means of influencing the minds of men."

"You might be right if I were the Apostle Paul and had a faith to preach as he had."

"And have you no faith to preach?" said Sterling, stopping and looking her full in the face.

"Well, I have a kind of faith, I suppose."

"Then, madam, preach that."

"But," said she, "supposing it is a very meagre faith?"

"I don't care," said Sterling; "preach it."

"But supposing," she said, "for instance, it was no more than that two and two make four?"

"Well," said he, "that would be a rather narrow basis on which to found a newspaper, but it would be an admirable gospel for its city editor. In fact," he added, "it seems to be the gospel which the present generation most needs. The chief end of man has long since been recognised by most men to be ten per cent. In their pursuit of this people forget their arithmetic, and, by some honest press or other, imagine that two and two either make more or less than four. A paper whose city editor applied this maxim inexorably to every department of the Stock Exchange and the money market would work a beneficent revolution."

"But a paper cannot be all city article," said Lady Sidney lightly.

"No," said he, "and if it were it would be no more. What you want is to get the doctrine that two and two make four into the head of the general public—of the investor and of the thrifty working man who puts all his savings into a rotten friendly society, or the poor widow who trusts her all in such a swindle as the Emancipator. Don't tell me it is odd that we should be talking like this. It is not so. This reminds me of what Grant was saying the very day." They were standing on the steps and looking down on the moonlit ruins of the Forum. Sterling, however, did not seem to see anything; he was evidently lost in thought. Lady Sidney, looking round, saw that Nedelca and Nedelca coming up from below, and clearly heard their voices.

"But, Professor," Nedelca was saying, "if a new truth came into the world now, do you think there would be need of another Colosseum to advertise it into existence?"

Then she heard the Professor say, "Oh, no. Colosseums were necessary before the printing press; nowadays if anyone has a new truth to teach there is only one advertising medium worth anything."

"What is that?" asked Nedelca.

THEY WERE LOOKING DOWN ON THE MOONLIT RUINS OF THE FORUM.

"The newspaper," said the Professor. "It is the camera obscura of the world."

Jasper Sterling had come to the end of his reflections. "I may as well tell you I am going to start a newspaper myself," he said. "It fits in in every way with your gospel that two and two make four."

"Do you mean," said Lady Sidney, "that you could start the paper with the million you wished me to throw into the sea?"

"Madam," said he gravely, "I had no such thought; and if I had, I certainly should not ask you to be my proprietor."

"Why?" said Lady Sidney, somewhat piqued at his tone.

He laughed as he said, "You have far too keen a hold on life to hanker after the martyr's crown!"

CHAPTER X.

GIDEON'S FLEECE.

WHEN Lady Sidney and Nedelca found themselves in the hotel they were both silent for some time. Each was too full of her own thoughts to care to break upon the other's reserve. But as they went to their rooms Nedelca said, "Mother, can a person be a saint without being a martyr?"

"Why, child?" said her mother, smiling.

"Because," said the girl, "it flashed upon me all of a sudden, when I was in the Colosseum to-night, that while I was urging you to become the new St. George I might be handing you over to a terrible death."

Nedelca's eyes filled with tears as she looked up into her mother's face with that wistful, fawn-like look which sometimes comes into the eyes of young girls when they are moved. Lady Sidney kissed her daughter, and said, "Well, dear, that might be all the better; but as Mr. Sterling told me to-night, I am as unworthy of the crown of the martyr as I am of the title of saint."

"Did he say that?" asked Nedelca.

"Well, not exactly," said her mother.

"For if he did I would never speak to him again. What does he know about you, the insolent creature, to say such a thing about my mother? I am sure if there is one person in the whole world who would not mind being martyred it is you; and it is just that which makes me so frightened about what I have said. I don't want you to be martyred, indeed I don't."

"Come, come, Nedelca," said her mother; "it is time that you were asleep."

The next day at breakfast Nedelca said to her mother, "Have you got any further clue to the mystery of the crystal?"

"Yes," said Lady Sidney, "it is becoming clearer to me. It is strange how the course of events seems to be just like what one sees in the crystal. First of all there is a mist, and you don't see how things are going to happen, and in which way they will turn. Then it clears, and you see quite straight before you what you are going to do."

"And do you see what you are going to do, mother?" said the girl.

"Not quite clearly yet," said Lady Sidney. "There is some mist still hanging about, but I am beginning to see."

"And you are really going to be St. George?"

"I think, God helping me," she said softly, "that I will try."

Nedelca went round to her mother's side and kissed her enthusiastically. "That is my own dear mother, who is a thousand times better than the old St. George was. And I shall be your little page. Tell me, will you not let me be your little page?"

"Certainly, child," said her mother. "But you seem to have got over your fright about martyrdom."

"I thought it over for a long time last night," said Nedelca, "and I came to the conclusion that after all it was worth while being martyred—that is, being martyred after you have killed the dragon, for it would be no fun to be martyred before."

Lady Sidney smiled at her daughter's quaint way of expressing herself, and turned the conversation in another direction.

That morning Nedelca met the Professor. "Professor," she said, "what do you know about Mr. Sterling?"

"Oh," said the Professor enthusiastically, "I have known him since he was a boy, and he has always been the same, only the older he grows the younger he becomes."

"Tell me: is he nice?"

"Well," said the Professor, looking at her with a smile, "it depends upon your taste. He is I should say just a little mad—not too mad, you know, but

just enough to keep his friends in a perpetual state of anxiety as to what he is going to do next. He is always breaking out in a new place, and he is often a greater affliction to his friends than to his foes. He has an absurd inverted notion of charity which, according to him, seems to consist in doing good turns to his enemies. But he seems to keep the balance even by doing bad turns to his friends when he thinks that they need the discipline of adversity."

"What is he?" said the girl.

"Journalist—journalist to his finger-tips. The instinct in him is so strong, that I am sure if he ever gets to the other side he will come back as a ghost to tell the world 'The Truth about the Other World.' He would be simply bursting to communicate his discoveries."

"Has he a newspaper?"

"Not yet. He has had one, and is now full of a great

"PROFESSOR, WHAT DO YOU KNOW ABOUT MR. STERLING?"

scheme of his own, of which I was hoping he would have told your mother last night. But it seems he did not say anything about it."

"Then, on the whole, you think he is nice?" said Nedelca.

"Well, nice," said the Professor, "but harum-scarum. Any one who wishes for a quiet life had better give him a wide berth."

At lunch Nedelca told her mother what the Professor had said about Sterling. "Yes," said Lady Sidney, "I think he knows that himself—at least, judging from the bitter remark he made about the martyr's crown."

"I should very much like to hear what he is really going to do," said Nedelca. "He must almost be like a transformation scene in the pantomime!"

"For shame, Nedelca! You would not talk like that if you had met him! I don't think I have ever met any one who spoke to me with such frank severity. Indeed, at times he was almost brutal!"

"Wretch!" said Nedelca; "I thought his voice sounded somewhat jarring among the ruins."

"No," said her mother, "I think on the whole he was right."

That afternoon the servant said that a gentleman wished to see Mrs. Ireton. "Did he send up his card?" said Lady Sidney.

"No, signora, the gentleman has not got his cards, but he scribbled his name on a piece of paper," which she produced rather shamefacedly. Lady Sidney read it. "Dear me," she said to Nedelca, "it is Mr. Sterling," and turning to the servant she told her to show him up.

When Jasper Sterling entered he shook hands cordially with Lady Sidney and her daughter, and then sitting down plunged at once *in medias res*.

"You must have thought me rather abrupt last night, and indeed I was rude to speak as I did to a lady whom I had never seen before; so I have just called round to apologise, and to ask you whether you are serious in what you said to me."

"I did not think you rude," said Lady Sidney gently; "it is seldom a man says to a woman exactly what he thinks."

"I always try to," said Jasper, "and I am glad you don't dislike it. Tell me, would you like to hear about my scheme?"

"I should like it above all things," said Lady Sidney.

"And so should I," said Nedelca, "if I may stay."

Jasper cast a sudden glance at the child under his shaggy eyebrows and said, "By all means, if it would not bore you."

Nedelca drew up her chair to her mother's side, and Sterling began to explain his scheme. "I am going to start a daily paper in London. I have no capital, and, what is more, I am not going to be beholden to any one by asking for it. I was afraid that you would think I was fishing for your millions when I was talking to you last night."

"I was not under any such illusion," said Lady Sidney.

"Thanks," said Sterling. "I do not want to start the paper unless it is my duty; and I regard the supplying of the needed funds as a sign of His will."

"Then you believe in signs and wonders?" said Lady Sidney.

Sterling glanced at her somewhat scornfully, and asked, "Do you know the story of Gideon's fleece?"

"You mean the novel?"

"No," replied he, "I mean the story in the Bible. But as you do not seem to know it, I will tell it to you. Gideon was suddenly warned by an angel of the Lord to lead the children of Israel against the Midianites. This was a large order, and Gideon was very dubious about taking it in hand. He had no experience as a leader; the Midianites were as

the sea-sand for multitude, and it seemed sheer madness to attempt any such enterprise unless God willed it. The question was, did God will it, or did He not?"

"Gideon being a level-headed practical man, devised a rough test. So Gideon said unto God, 'If thou wilt save Israel by my hand, as thou hast said, behold I will put a fleece of wool upon the floor, and if the dew be on the fleece only, and it be dry on the earth beside, then shall I know that thou wilt save Israel by my hand.'"

"And was it so?" asked Nedelca, who was not as familiar with the history of the Judges of Israel as she ought to have been.

"It is written," said Sterling, "that it was so. 'For he rose up in the morning and thrust the fleece together, and wrung the dew out of the fleece—a bowlful of water.' I

JASPER STERLING.

am just in the same position as Gideon was. I have placed my fleece upon the threshing floor, and am waiting to see if there will be any dew on it."

"What do you mean by dew on your fleece?" asked Lady Sidney.

"I used to say," said he lightly, "that I would be content with nothing less than a quarter of a million of money stumped down on the table without my asking for it. But I have given that up long ago. It would be too easy."

"What do you want now?" asked Nedelca.

"I want 100,000 persons who will be willing to pay a year's subscription in advance for the paper which I hope to found."

"And you would do it if you get them?"

"Yes," said he, "100,000 prepaid subscriptions for one year for a paper which is not to be in existence for nine months, that would be as marvellous a sign as the dew on Gideon's fleece."

"Do you think," said Lady Sidney, "that the dew will fall?"

"That depends upon whether or not I am wanted to start the paper. If I am, I shall be willing; if not I shall not be grieved, for the hosts of Midian are strong, and my strength is but small."

"What kind of a paper do you propose to establish?"

"A penny morning daily paper. I edited a halfpenny paper for years, but there is no scope for side-shows on a halfpenny paper, and a paper without side-shows is nothing."

"What do you mean by side-shows?" said Nedelca.

"Oh, I mean everything that a newspaper does in addition to the mere collecting of news and advertisements and printing them on a sheet of paper. That kind of paper I would not go across the street to edit, no, not if my fabled old lady with her £250,000 were to arrive by the next mail."

At that moment Professor Glogoul, hearing that his friend was with Mrs. Ireton, entered and sat down without interrupting the conversation.

"Talking about the paper," said Sterling in explanation: "Mrs. Ireton wanted to know about it, and I am telling her."

"Have you told her," said the Professor, "of the new departure which you are going to make in the shape of the paper?"

"No," said Sterling, "I have not told her anything."

"You will be interested, madam," said Glogoul, "in hearing about this. You know in my country the papers are growing bigger and bigger, until their dimensions

will soon have to be reckoned by the acre. The rage of adding page to page and column to column has resulted in the production every morning, and especially Sunday mornings, of as much reading as there is in a family Bible in quantity. It is inferior in quality."

"My idea," said Sterling, breaking in upon the Professor's talk, "is that the day of the blanket paper is over. I am going to produce a paper which will be the size of a magazine. Hitherto insuperable difficulties have stood in the way of the production of such a journal. These difficulties have been surmounted by a friend of mine, and my daily paper is to be this shape." As he spoke, he produced what seemed to be a crown quarto pamphlet, 10 inches by 7 inches, with clean cut edges, pasted neatly and firmly down the centre. When he produced it Lady Sidney gazed at it curiously, for there she saw for the first time the exact shape of the publication, which looked half pamphlet, half magazine, as she had seen it in the gipsy's crystal.

"There," said he, "that is the shape of the paper of the future. It is manageable, readable, and handy. You need not spill the salt when you unfold it at the breakfast table, or put out your neighbours' eyes on opening it in the train or omnibus. When you get out of the train it is easily put into the pocket, and if you wish to file it for reference it is bound as easily as a magazine."

"Are you sure it can be done?" asked Lady Sidney.

"Sure?" said Professor Glogoul. "Oh, you have never seen the Feister machine, or you would not ask that question. Wonderful machine that—can do anything but talk. It is a nice handy machine, which you feed with white paper at one end and receive forty-paged pamphlets, neatly pasted, cut, and printed, at the other, as quick as you can say Jack Robinson."

"I like the shape," said Lady Sidney, handling the dummy copy which Sterling had brought—"I like the shape. It is novel and convenient for the reader; but will you have space enough?"

"Yes and no," said Sterling. "There will be space for everything that ought to go into it, but there will not be space for everything that I should like to put into it. But that is so with every paper under heaven. Even with the family Bible blanket papers there is always matter left out which the sub-editor wishes to get in. It sometimes really seems that the more space you have the less room there is."

"The shape is all right," said Lady Sidney, "but what about the contents?"

"The first thing," said Sterling brightly, "is that the paper must be interesting, otherwise it is fit for nothing excepting to be thrown into the waste-paper basket. The first indispensable desideratum of anything pub-

lished to be read is that it must be readable. If any copy is not readable, that is, if it is dull, heavy, and unattractive, it will have no place in my paper."

"But interesting events," said Nedelca, "do not happen every day."

"You mean the previous twenty-four hours," said Sterling. "I grant it; but my paper will not only be a record of the previous twenty-four hours. An immense majority of people never read anything excepting the newspaper; the consequence is that millions of men have practically no past. Their horizon is limited by yesterday, and of all such men sub-editors are the worst. There is a sentence of Richter's which often recurs to my mind. He said, 'The manhood of to-day would sink to an unfathomably low level if youth did not take its way to the world's market-place through the silent temple of the great times and the men of the ancient world.' What is true of youth is not less true of all men. The memory of the past is the consecration of the present and the prophecy of the future. But the great

"THAT IS THE SHAPE OF THE PAPER OF THE FUTURE."

names which stir the heart of the scholar like the blast of a trumpet—Thermopylæ, Marathon, Salamis—to mention only three in the history of one small state, they are empty words, without meaning, to the majority of men. If their significance is to be made a living and vivifying force for the mass of men, it must be through the newspapers."

"I agree," said Lady Sidney; "but how could it be done?"

"It is very simple," said Sterling. "When news is slack, and there is nothing particular going on, I shall publish, as if it were special correspondence from the seat of war, the news of great campaigns in the past, or report some famous trial which broadened the range of religious liberty or civil freedom. To the majority of readers the campaigns of Hannibal are as much news as was the correspondence from the Franco-German war; and the trials of Servetus or of Laud contain matter that is quite as new to most of our readers as the latest development of a sensational divorce case in the law courts."

"Then," said Lady Sidney, "would you apply that principle all round?"

"What do you mean?" said he.

"I was thinking of Christianity and its origin," she replied.

"Certainly," said Sterling. "When I publish my paper for Sunday reading I shall print the life of our Lord in the shape of special correspondent's letters written to Rome from the court of Herod. The tendency of newspaperdom is to obscure everything excepting the events of the immediate yesterday. But history, literature, and religion are not events of yesterday. Therefore they are for the most part closed books to the majority of men."

"You see," said the Professor, "what he proposes is not so much a newspaper, but a new paper which will look after the affairs of the human race just as the Popes used to do."

"You are not far wrong, Glogoul," said Sterling. "The fundamental idea at the back of my mind is much more like a church in the old extended sense of the words than of a newspaper in the sense of a sheet which limits itself to a printed record of the doings of yesterday. I carry that principle so far that I shall supply in every issue what may be regarded as the journalistic counterpart to the Morning Service of the Church."

"Really," said Nedelca, "that is interesting; but how could you do it?"

"You can do anything," said Sterling positively, "you can do anything you like as long as you make it interesting, and to the majority of men that means being *à propos* and on the nail. The disadvantage of the church morning service is that it goes on day after day, year in and year out, without any special adaptation to the needs or the circumstances of the people. Hence it is perfectly possible to have a penitential prayer on a day of public rejoicing, or a jubilant psalm when the nation is bowed with grief. If you want to have family prayers up to date they ought to be edited from day to day to suit the circumstances of the time. Then you must have a much wider range. The heirs of all the ages are also the inheritors of the wisdom in the sacred books of all religions, the writings of all philosophers, and the poetry of all nations. One page in every forty will be set apart for this cultivation of the ideal, this appeal to the higher soul that is in every man. Each day will have its collect, its psalm, and its poem, and it will not by any means be the least popular part of the journal."

"You are quite right, Jasper," said the Professor. "But Sterling is not only going to have his morning service, he is also going to establish his confessional and his pilgrimages, an inquisition and a pillory. The only things he is not going to have are the dungeon and the stake; all the other notions of the Catholic Church he is going to appropriate bodily."

"Do be serious sometimes, Professor," said Sterling, frowning slightly. "All that he means is, that I want to make the paper a universal encyclopædia of information and an Enquire Within about Everything. The newspaper editor ought to be a kind of incarnate encyclopædia of information concerning everything and everybody. No department of the new paper ought to be more carefully organised than that which deals with cases of conscience, and which undertakes to direct the wanderer either in the paths of knowledge or in matters of conduct."

"You spoke of men," said Lady Sidney. "Is the staff of your paper to be confined, like the clergy, to one sex?"

"No," said he, "I hate one-sexed staffs. But I shall never appoint a man to a single position on the paper, from the highest to the lowest, until I have satisfied myself that I cannot get a woman to do the work."

"Do you call that equality?" said the Professor.

"I call it an attempt to keep the balance even. On every paper in the country no woman is appointed if a man can be found to do the work. I simply reverse the rule, and give the woman the first chance."

"How far do you think you will be able to find capable women?"

"It is difficult to say," he answered dubiously. "The paper can be composed from first to last by women; there will be women clerks in the counting-rooms; women make excellent advertising agents; they are useful for interviewing and reporting, they are admirable indexers, and there are one or two women who are capable of taking an editorship. At present they are very few, but they will train on no doubt. One little thing I am going to do which will probably surprise people. All my newspaper carts will be driven by women. Women drive in the park; there is no reason why they should not drive in the City. Many women have a passion for horses, and there is no reason to believe that this passion is confined to the classes; it is probably just as strong in the masses. A lady driver smartly got up in a fine turn-out will add to the picturesqueness of street life, besides opening up another field for capable young women."

"I approve of that," said Nedelca. "Do you think that I might drive one of Mr. Sterling's carts now and then, mother?"

"We shall see," said Lady Sidney.

"But you have not told Mrs. Ireton what you are going to do in the financial part of the paper," said the Professor.

"That is where I thought you might be useful, if you cared to be," said Sterling. "I do not bother about money. As long as there is a balance at the bank on the right side the rest is immaterial. I had not thought of going beyond getting a thoroughly trustworthy city editor, and letting him do what he could. But one of your remarks last night led me to think that my idea of a paper might be hitched on to your idea of the gospel that two and two make four."

"In what way?"

"I will start my paper, that is if I get the dew on my fleece. But if I could arrange with you to make the financial question a very important feature of it, it might do good."

"How?" said Lady Sidney.

"Suppose," said he, "we discarded the ordinary City intelligence, and employed a thoroughly competent and fearlessly upright staff, whose special duty it will be to prick all bubbles, to burst up all shams, and to expose all frauds, and generally to show up the sharks and hypocrites who are attempting to snare the unwary investor."

Nedelca clapped her hands and said, "Oh! mother, is that not splendid?"

Lady Sidney said nothing, and Sterling continued: "Every reader of the paper ought to have an opportunity of

obtaining a perfectly independent opinion as to the value of the security which he holds. No pains should be spared to ascertain the truth about all societies, companies, and institutions which appeal to the public for subscriptions, and when information is withheld and the balance-sheets are purposely muddled to keep the investor in the dark, the names of the offending companies should be pilloried in a black list, to which every reader of the paper should have access. I think it would be possible," he said, "if such a paper were properly financed, to strike terror into the hearts of the fraudulent company promoters and stock-jobbers, who, either in the cause of philanthropy or otherwise, make their fortunes by robbing their neighbours."

Professor Glogoul looked upon Sterling with pride, not unmingled with compassion. "But, my dear fellow, have you calculated what it would cost?"

"A lawsuit a week," said Sterling gravely, "and a lawyer's bill of £10,000 a year to start with. That I think is the least it could be done for. But that £10,000 would save the honest investor millions, and after the first year there would not be much alacrity to try conclusions with our city editor. Now," said he, "I do not want to ask you to do it, but I would only like you to understand that if you are willing to finance that side of the paper and insure the concern against the risk of libel actions, I am willing to try to do the rest."

Nedelca looked wistfully at her mother's face. Lady Sidney was silent. At last she said, "Did you not tell me last night that I was not worthy of the martyr's crown? Wherein does this differ from the position which you said I would be the last person in the world to fill?"

"Dear Mrs. Ireton," said Sterling, "I am sorry if I offended you, but the two things are as far apart as the poles. If you founded the paper you would have a right to control the policy of the paper; you would be held responsible for every line that appeared in the paper, and your life would be made a burden to you. But under the arrangement I propose you would have absolutely no responsibility for the paper, not even for the financial columns. You would only be the underwriter who insured the paper against loss in carrying out your line of policy on one set of subjects, with the details of which you would have nothing to do."

There was silence for a time. Then Lady Sidney said, "I do not want to control you in the conduct of the paper, nor do I in any way wish to interfere with your freedom and responsibility in the details of editorial management; but it seems to me that if I have to finance your financial department I should incur obligations which could not be so easily repudiated as you seem to think. Nor do I believe that finance is the only department of your paper in which I could be helpful. I have seen life on many sides, and I have often thought what a newspaper might do if it really attempted to be, *servus servorum hominum*. I have leisure, money, and some degree of experience in the world and its ways which might not be unuseful in a paper such as you imagine. If I trust you as you suggest, will you allow me to help to the extent of my capacity?"

Sterling looked embarrassed. "In what direction do you think you could help?" he asked. "I may say at once that on no consideration could I consent to tie my hands or come

under any obligation to any human being that would limit my freedom to say from day to day exactly what I thought I ought."

"It will be time enough to raise that question," said Lady Sidney somewhat tartly, "when any one proposes to limit your authority. I accepted your absolute authority in everything as a basis; I only asked you if you would allow me to help you to the utmost of my capacity. I do not do things by halves. Therefore if I finance your financial department, I throw in my lot with your new paper without reserve. I think that if you reflect upon it, I am risking much more than you."

"But, Mrs. Ireton, how do you propose to help me?"

"Well, then, Mr. Sterling," said she, smiling at his exceeding mistrust, "I may as well tell you that I am not Mr. Ireton, but Lady Sidney Nestor, and my daughter is Nedelca Nestor, of Dunstan Lodge, the New Forest. And the way in which I propose to help you would be by taking into my own hands from the first the whole management of what you call the social side-shows of the new paper."

Jasper Sterling and the Professor both started when they heard Lady Sidney's name and rank. The Professor had known Mr. Nestor in the old days when they had studied at Harvard together, and he was genuinely grieved to think that he had been living under the same roof as the widow of his friend without knowing anything of her identity. The name of Lady Sidney had been very familiar to Jasper Sterling for years. On his foreign journalistic missions he had frequently heard of Lady Sidney as the fearless, brilliant, modern woman. He had known princes who had been hopelessly in love with her, and had heard from diplomatists of the extraordinary success with which she had managed the *salon* at her father's embassy. Here was this brilliant and gifted lady offering herself unhesitatingly to manage the whole social side of the new paper. It almost turned him dizzy, and for some moments he could not speak. When Professor Glogoul could only stammer some words of regret, pleasure, and surprise, at discovering the identity of Mrs. Ireton, Nedelca watched Jasper keenly, wondering what was the reason of the strange abstraction which had suddenly come over him. He was struggling with a tide of overflowing emotions, wonder and gratitude being mingled with a certain dread which often comes to a man at the crisis of his fate before he has to take decisive action. At last he spoke.

"Lady Sidney, this is more than I ever dreamed of, and at present I can hardly consider it anything but a dream. I am not worthy," he added, "indeed I am not." So saying, he rose and somewhat abruptly bade Lady Sidney good-bye.

Nedelca followed him to the door, and while the Professor was taking leave of her mother, she said to Sterling, "Are you going to accept mother's offer?"

He looked at the girl with a somewhat troubled air, and then said, "Yes, certainly, if there is dew on my fleece."

Without waiting for another question, he slipped downstairs and was gone. The moment Nedelca was alone with her mother, she embraced her tenderly and said, "And so you are really to be St. George after all!"

"At least," said Lady Sidney, "I think I have found my charger. But the dragon has still to be slain."

PART III.—NINETEEN HUNDRED.

CHAPTER I.

THE PROFESSOR'S RETURN.

In the early summer of 1900, Professor Glogoul, with his wife Irene, arrived at Euston from Liverpool. It was his first visit to England since he had married Irene Vernon at Chicago in the year of the World's Fair. The last six years she had been his constant companion in a series of adventurous excursions through all the wildest parts of South and North America. He had aged somewhat, and Irene had lost something of her girlish youthfulness and her reckless longing for thrills. In the six years that had passed, she had had enough of thrills to satisfy even the most insatiable, in perils by land and water. She had been lost among the Andes, and she had been hunted across the Pampas by Indians thirsting for her blood. Irene and the Professor had seen much of life, but at the same time, owing to their absence from civilisation, they knew singularly little of what had been going on in the meantime.

They were driving down to the Métropole, when they were stopped beside King Charles's monument by a splendid team of dappled greys, driven by a lady from a brake filled with about twenty persons, which went past at a swinging trot. As they passed the Professor gave a sharp whistle, which startled his wife.

"Really, Glogoul, you ought to be ashamed of yourself," she said. "You ought to remember that we are not on the Pampas, or in the Rockies, but in the heart of London."

The Professor, however, did not seem to heed, for he had stretched forward from the hansom, and was staring in the direction of the well-appointed brake, of which he could catch another side glimpse as it turned to the left along the Embankment.

As the driver was making his way to the hotel, he asked the man, "Who is the lady driving? Did you see her?"

"Do you think I am blind, governor!" said the cabman. "Taint difficult to see a carriage and four. A regular clipper, warn't she?"

"Glogoul," said his wife, pulling him by the coat tails, "you are going mad!"

Thus arraigned, Glogoul sat down.

"Did you not see her?" he said to his wife.

"See whom? You seem strangely excited about some woman. What do you mean?" said Irene, pretending to be jealous.

"Why, the driver of that brake. How splendidly she handled the ribbons along! I knew her in a moment—I could have sworn to her among a thousand!"

"Whom do you mean?" said Irene.

"Why, Lady Sidney! She was driving the brake which passed us just now. Heigho!" said the Professor. "It is seven years and more since I left her in Rome. I wonder how she has got on?"

"You seem to think a great deal more about that lady than you do about your own wife," said Irene. "Here we are at the hotel. I wish you would look smart, get the luggage, pay the hansom, and let us get to our rooms. I am dead tired, and much more in need of a bath than information about any Lady Sidney."

The Professor was either too much accustomed to her tantrums, or too much excited by the sudden appearance of Lady Sidney, to reply.

As soon as he had got his wife into her room with her luggage, he descended in the lift and began questioning the concierge.

"Did you see that four-in-hand drive past just now?"

No, the concierge had not seen it; but what was it like?

"It was a long brake, stylishly got up, with a footman in plain livery at the back; there were about twenty people in the brake, I should say, which was driven by a lady. It passed the hotel on its way to the Embankment."

"Oh!" said the man, "I did not see it, but I know the brake; it is one of the carriages of the *Daily Paper*, and Lady Sidney is coming in from one of her rounds."

"The daily paper! What daily paper?" said the Professor.

"Why, *The Daily Paper*," said the man, looking at the Professor with a glance of unmitigated contempt.

The Professor was in no mood to stand the insolence of the British waiter, and answered sharply—

"Don't be a fool, man; I have arrived in London only this moment from Paraguay. I have heard of daily papers before; but never of this one of which you speak."

"There are daily papers and daily papers," said the man, more civilly; "but *The Daily Paper* is the only one that goes by that name. It belongs to a man called Sterling, and Lady Sidney seems to have a great deal to do with it."

"Where are its offices?" asked the Professor.

"On the Embankment, just opposite the Needle."

The Professor waited to ask no more questions, but instantly left the hotel and made his way to the Embankment.

What a transformation had taken place since he had been there seven years ago! The whole place seemed transfigured. It had all the stir and movement of a Parisian boulevard. Decorated kiosks stood at every fifty yards, a band was playing in the garden, and well-dressed crowds sat under the trees and sipped their afternoon tea, listening to the strains of the band. Along the river, at intervals, were moored two or three extremely pretty floating-baths, the roofs of which were laid out as gardens, on which the bathers, after their dip, used to walk. But what impressed him most was the number of electric lights which rose on decorated standards not unlike Venetian masts, so close together that it seemed evident that there was no more brightly lighted place on the world's surface than that which lay between Somerset House and Charing Cross. High over it all towered the huge Emancipator building, with its two towers, from which were flying the American and British flags, while in the centre there had been added a tall stately shaft, recalling the proportions of the Eiffel Tower. The front of the building was gay with the garden of spring, for everywhere there seemed to be plants and flowers. Right across the building, below the cornice immediately under the roof, he read the inscription—

THE DAILY PAPER.

The letters were picked out in various coloured glass which looked like mosaic in daytime, but which, when illuminated after dark, flashed with all the splendour of a stained glass window in a cathedral.

While the Professor was rapidly taking in the transformation that had been wrought since he left London, he was nearly run over by a newspaper cart. He had been standing in the middle of the road, and had been so absorbed in his observations that he had not heard the shrill warning cry of its driver. As the wheel grazed his sleeve he looked up somewhat angrily, and discovered to his astonishment that the driver was a bright young woman of about twenty-five, very plainly but prettily dressed, with a natty jockey cap which she did not discredit, since she was handling the reins like Jehu, the son of Nimshi.

"Better look out," said a policeman; "it was a near squeak that time."

Then it suddenly dawned upon the Professor's mind what Sterling had said in the hotel at Rome when he told Lady Sidney about his scheme. "Strange fellow, Sterling," thought he; "he has got his women drivers after all, and now one of them has very nearly finished me off. That would have been a nice thing indeed; but I had better get on to the pavement."

He crossed the road and stood by the parapet of the Embankment. The tide was high, and the June sun shone brightly upon the water. The river as he remembered it was practically given over to black wherries and steamers. It was now alive with small craft. Three sets of eights were practising, racing almost side by side. But they attracted his attention less than a dozen long boats rowed by mixed crews of lads and lasses, each with a distinctive cap, who were bending to their oars with a will. Very pretty they looked in their light flannels and their various coloured caps, as they made the water fly with their flashing oars. There were several sail boats floating to and fro in the light breeze like white winged butterflies; he had never seen the river so gay and so full of animation. The whole of the Embankment was lined with onlookers sharing his enjoyment of the scene. Presently his attention was attracted by strains of music from the other side of Waterloo Bridge. Looking in that direction, he saw the sounds proceeded from a long graceful barge, that recalled reminiscences of the state barges of Queen Elizabeth's time. The prow was ornate and richly gilded. Under a canopy of Venetian red sat the band, which was discoursing old-fashioned music.

"What, in the name of fortune," said he, "is that?"

"Oh, it is only one of the barges that will take part in the great fête next week."

"What fête?" asked he.

The man who had answered his question stared at him, as if such ignorance was not only inconceivable, but morally wrong.

The Professor noticed his look, and apologised.

"To-day," he said, "I have come from South America."

"Oh," said the other, "that explains it; but look there—how fast she goes! Isn't she a beauty?"

Looking in the direction indicated, the Professor saw a beautifully-modelled electric launch. It had just put off from the Embankment at Cleopatra's Needle.

"What is that?" said the Professor.

"That" said the man—"that is Lady Sidney and her party. I suppose they will be going to inspect the turnout, as it is the last Saturday before the fête."

The Professor would again have asked what fête, if it had not been that his attention had been riveted upon the launch. It was indeed a thing of beauty and of life; graceful as a swan, it seemed almost to fly over the surface of the water. But it was not the launch so much as the occupants that attracted his attention. Lady Sidney he easily discerned; and that must surely be Nedelca. But what a woman she had grown! The third member of the party he did not recognise. He heard the silver music of Nedelca's merry laugh as the boat passed under Hungerford Bridge and disappeared. By this time he thought his wife would be getting impatient, so he hurried back to the hotel.

Irene had, however, recovered her good temper after her bath, and was only mildly inquisitive as to where he had been.

"Do wash and dress for dinner; you look as travel-stained as if you had never had a bath in your life," said she.

An hour afterwards the Professor led Irene down to the dining-room. She was blooming. The six years of travel had given maturity to her beauty. The wilfulness had gone, and in its place had come a certain look of quiet

resolution, which made even the most casual observer feel that she was not a woman to be trifled with.

As luck would have it, they had a very pleasant visit at their table. He was an elderly gentleman, of the game globe-trotter, who in the course of a long lifetime had accumulated a vast fund of gossip, and who had apparently decided that, on the whole, he could not end his days more pleasantly than in London.

"I intended at one time," said their companion, "to have settled in Paris or in Vienna, but neither of these cities is as pleasant as London."

"Really," said Irene, "then it must have changed since I was a girl."

"Since you were a girl, madam!" said he politely; "that cannot be very long; but the change has come about practically in the last three or four years."

"Indeed," said the Professor, "that is very curious. Such changes, if they occur at all, are usually about geologic in the time which they take to get accomplished."

"So it might have been," said their companion; "but even in geology there are cataclysms which expedite the process of nature, and in this case it was Lady Sidney New, the widow of a countryman of yours," said he to the Professor.

"That interests me immensely," replied the Professor.

"Do tell me how it came to pass?"

"Well," said Mr. Pybus, for that was the name of their companion, "it is not exactly clear how it came about; the only thing that is certain is that Lady Sidney did it. Her husband, some eight years ago, was killed by a runaway hansom on the Embankment. Lady Sidney was devoted to his memory, and has never looked at another man since—at least not in that way," he said with a glance at Irene, who appeared absorbed in her soup. "At first she seemed utterly broken down, but in a year's time she came back to London, with her heart set upon commemorating her husband's memory by making the spot where he died the centre of the whole world. And, what is more remarkable still, she has succeeded to a marvel."

"There certainly seemed a great change," said the Professor. "To-day, when I went upon the Embankment, I hardly recognised the place."

"I should think you did not," said Mr. Pybus. "The woman! she stops at nothing, and upon my word she seems to melt before her like icicles. She smiles upon them, and goes ahead, and there she is."

"Was that the lady," said Irene, "whom we saw driving the four-in-hand?"

"What was she like?" said Mr. Pybus.

"A fine woman on the whole. She seemed a good whip," said Irene carelessly.

"It must have been Lady Sidney," said Mr. Pybus; "she has been going one of her rounds. That is one of her mad freaks. Sterling, the *Daily Paper* man, you know, has great ideas about pilgrimages, thought people needed something of the past, and so forth and so on, and so one of his first was to run four-in-hand brakes every day round what he called 'the shrines of London.' It did pretty well, especially as he used to send a first-class young University woman round with the brakes to lecture the pilgrims, as he called them, upon what they saw. But the great success of the scheme dates from the day that Lady Sidney took it in hand. The story goes that she came down to the editor one fine day, and told Sterling that these London pilgrimages were not half as good as they might be; and that he must let her get in to the box."

"Sterling protested, said it would be *infra dig.* and so forth, but Lady Sidney vowed that as noblemen drove four-in-hands every day, rain or shine, it was only fair to let her drive one of the pilgrim brakes once a week. Of course she

A SPLENDID TEAM OF DAPPLED GREYS, DRIVEN BY A LADY FROM A BRAKE FILLED WITH ABOUT TWENTY PERSONS.

had her way—she always has, especially with Sterling—and a great sensation it created when Lady Sidney took the *Daily Paper* brake round London. There is not a better whip in the country, and the way she takes her horses through the crowded streets is a sight to behold. But that was only the beginning of it. Lady Sidney having set the fashion, all her set were keen to try their hands as drivers, and the result is it is not at all uncommon to see a dashing Society woman driving one of Sterling's teams for the fun of the thing."

"How does Lady Sidney find time for driving round London in this fashion?" asked the Professor.

"Find time! Oh, I forgot," said Mr. Pybus; "that is the beauty of it. Her ladyship always contrives to make her right hand serve her left, and she has arranged things so as to get through more work in her driving day than she gets through in the other days of the week. Whether it was in her mind from the beginning, or whether it was suggested by the experiences of her first round, I don't know, but she very soon took it up. The brake leaves the *Daily Paper* office on the Embankment every morning at ten o'clock, calls at the Law Courts and St. Paul's, drives to the Tower and then crosses the Bridge to Southwark—from some ridiculous fancy of Sterling's about Chaucer, Dickens, and some other authors of that kind. From St. Saviour's the route goes to Spurgeon's Tabernacle and round to Lambeth Palace, then over the river to the Abbey and Parliament House; after that they come home. Each brake is accompanied by a charming girl-graduate—they say it is better than any lecture in the classroom. That is Lady Sidney's route. There are other routes on other days, visiting all the centres of interest. The whole thing is so arranged that any one who chooses to take a course of six days' drives will see everything that is to be seen in London, and have every feature of interest lucidly pointed out by a thoroughly competent scholar."

"It is as good as a course of English History at a university, and a great deal more interesting," said Irene. "Glogoul, I hope you will book us two seats in these pilgrim brakes every day next week!"

"We shall see," said the Professor.

"But how does Lady Sidney make it save time?"

"Well, you see," continued Mr. Pybus, "Lady Sidney has a wonderful social position; she is quite a queen in the land. She holds her court and drawing-rooms, where she meets all the leading people in town, whether they are colonists, Americans, or foreigners. Any one who has done any good work is to be seen at Lady Sidney's receptions or at her little dinner parties, invitations to which are most coveted, for no one is ever invited unless he has done something distinguishing him from the ordinary crowd. She has also thrown herself heart and soul into the whole of the social work. It is another of Sterling's fads, and this entails no end of calls and correspondence; but she has got rid of a good deal of all this by holding a court or levee at each of the places at which the brake stops. For instance, when the lecturer is conducting the pilgrims through the Law Courts, you will find her ladyship in one of the rooms, where she holds a kind of legal and judicial reception before the Court opens and the cases are called. If it is Lady Sidney's day, any barrister or judge who wishes to see her, or whom she wishes to meet, finds it saves time and is a very pleasant opening of the day to look in to see Lady Sidney. The moment the pilgrims are through the Courts the reception breaks up, as she is on her way to the next stopping-place. At St. Paul's Cathedral, for instance, she receives in the Deanery, which the Dean has kindly placed at her disposal. Any of the ministers of religion of the City who wish to see her to ask her advice, or to solicit her support on behalf of any of their schemes, can meet her there. However busy they may be, there is never a parson

who would lose a chance of that half hour at the Deanery. Sometimes a bishop contrives to look in, busy as he is, and it is a joke among the clergy to see how much Lady Sidney's exquisite manners and tact tend to blunt the rough edge of episcopal brusquerie. So it goes on. At the Tower she receives Trade Union leaders, sailors and seamen from the docks, together with their masters. In Lady Sidney's presence the poorest docker feels that he is as much a gentleman as his master, and it is astonishing the influence that one half hour gives her. In Southwark they stop to lunch."

"In Southwark!" said Irene. "If I remember rightly, it was not a paradise of good feeding."

"You are right," said Mr. Pybus; "but she has changed all that, as she has changed everything else. As I daresay you know, one of the great features of the *Daily Paper*—"

"No," said Irene, "we don't know anything about the *Daily Paper*. We have just come from Paraguay."

"But everybody knows about the *Daily Paper* everywhere," said Pybus.

"But we haven't seen a paper for two years."

"Ah, that explains things!" said Pybus. "Well, one of the great features of the *Daily Paper* was the improvement in the art of cookery. With that end in view, they not only engaged a cookery-page editor, but they also started a place to show you how the cooking was done."

"The first was started in the Strand, close to the office. They had a first-class *chef*, everything was cheap and good, and as a result a great demand sprang up for similar restaurants all over London. Sterling is a devotee of Chaucer, and nothing would satisfy him till he got possession of the site of the Old Tabard Inn, where he erected a *Daily Paper* restaurant. There was some trouble at first, but Lady Sidney succeeded in getting the place, and it is there where the pilgrims lunch at one o'clock. That is one of the most prized privileges of the pilgrimage. Lady Sidney sits at the head of the table, and the Girton girl at the bottom. The pilgrims are encouraged to talk, and are questioned as to what they have seen. It is in reality a kind of informal examination, although so pleasantly conducted that they do not know anything beyond the fact that they are enjoying a very pleasant lunch. Then when cigarettes and coffee are served, Lady Sidney takes the opportunity of hearing musical *débutantes*, who are always clamouring for the privilege of singing before her. On a raised dais at one end of the room, which is made for the purpose, the *débutante*, whether singer or performer, shows what she can do. No persons are allowed a trial until they have satisfied the musical director of the *Daily Paper* that they are up to a certain standard, but Lady Sidney herself decides as to whether or not they are sufficiently promising to be taken up."

"After lunch the next halt is at Spurgeon's Tabernacle. Here she meets the clergy and ministers of religion, just as she does at the Deanery, the only difference being the diocese and the place of meeting. The Dean of St. Paul's somewhat haggled at first at allowing Nonconformists to meet her ladyship at the Deanery; but hearing of it, Lady Sidney drove at once to the Deanery, and in five minutes the good man, hardly knowing how or why, gave his promise to make no difference between the Established and the non-Established ministers."

"As the visit to the Tabernacle does not occupy long, her ladyship remains behind while the pilgrims go on to Lambeth Palace. Lady Sidney then drives to St. Thomas's Hospital, where she holds a kind of levee of the doctors and nurses, occasionally finding time to visit the wards. The pilgrims, after being taken over Lambeth Palace, cross the river to the Abbey, the greatest shrine of all. While they

are going over the Abbey Lady Sidney meets a select little company of men of letters whom the Dean is delighted to collect for her every week. From the Abbey to the Houses of Parliament is but a stone's throw; and while the pilgrims are inspecting them Lady Sidney proceeds direct to the Terrace, where she has tea, surrounded by a bevy of the most influential and rising men in the House. Then, taking her seat once more on the brake, she rattles the pilgrims back to the office in fine style."

"That was when we saw her," said the Professor.

"A wonderful woman—wonderful!" said Pybus.

There was a slight lull in the conversation, when a dull roar, like the discharge of a cannon, startled Irene.

"What is that?" asked the Professor.

Pybus looked at his watch and said, "It is the latest edition of the curfew bell which Lady Sidney has introduced into London. It is fired punctually at eight o'clock as a signal that all shops ought to be closed. Of course there is no law to that effect, but the sound of the maroon which is fired high into mid-air is heard all over London, and is as a loud-voiced monitor to all employers who keep their shops open or their assistants employed after that time. It is astonishing what an influence that has had in favour of the movement for early closing. In cases of dispute it is enough for the employees to say that they have worked after curfew without extra pay to enlist the support of the public on their behalf. It is also useful as a time gun, for all watches are set by the curfew bomb."

"Does no one object?" said Irene.

"Oh," said Pybus, "at first there was a great row, and there was an attempt to indict the bomb as a nuisance. But the thing was arranged somehow, how I don't know, but I expect that Lady Sidney fixed it up."

"Really," said Irene, "I think this Lady Sidney is the most remarkable woman I have ever heard of."

"Or any one else, I should say," said Pybus. "Why, I have just mentioned two little things which she does, and that is only a drop in the ocean to the work she is doing every day. But," he said, "if you are interested in the subject, here is Mr. Runce, who is on the staff of the *Daily Paper*. I will introduce you to him in the smoking-room after dinner. He will tell you much more than I can about Lady Sidney."

"It is quite a revolution."

"Revolution, sir! It is the most extraordinary thing which has happened in my time! 'Pon my word, she is making old England merry England once more. You have no idea of the sunlight which this woman has let in upon the everyday life of this city."

After dinner, Irene, being tired, went to her room. The Professor followed Mr. Pybus to the smoking-room, where he was introduced to Mr. Runce. He found that worthy in deep conversation with a young man, who was showing him different sketches of various ornate barges. After a time the young man gathered up his papers and went away. "Excuse me," he said, taking a seat next the Professor, "but I had to see those drawings before the order of the barges in the procession could be made up."

"What barges?" asked the Professor; but as he saw the look on Mr. Runce's face he added quickly, "Excuse me, but I have just arrived from South America to-day, and know nothing that has been going on in England for the last six years."

"Then you know nothing about the fête next week?"

"Nothing whatever."

"That is one of Lady Sidney's notions. Sterling and Lady Sidney brought back with them from Italy the idea of reviving the old aquatic fêtes which used to form so large a feature in merry England of the days of old. And between

them they have contrived a fête in the middle of June which beats anything which has been ever attempted previously. This year the fête comes off on the 14th of June."

"Does it always take place on the same day?" asked the Professor.

"No, it is a movable feast fixed as near to midsummer as possible. It is always fixed for a Saturday afternoon when the tide is flowing. The Lord Mayor's Show is nothing to it. For months before it is the one absorbing topic of the riverside folk."

"What kind of thing is it like?" said the Professor.

"It is a combination," said Runce, "of all the great State processions, with barges modelled on the historical barges of time gone by. You will see, for instance, on the 14th, the facsimile of the barge which brought the dead Nelson from Greenwich to Somerset House after Trafalgar, as well as a representation of Queen Elizabeth's barge, with others, each containing a band of musicians and gaily dressed oarsmen. That, however, is only one feature of the procession. It is more than a mile long, and is a general muster day of the boats of all the schools and rowing clubs which have been established chiefly through the agency of the *Daily Paper* in connection with most of the Sunday and day schools on both sides of the river."

"But how did it all come about?" said the Professor.

"Well," said Runce, "it is a long story; but I can make it short. Six years ago Lady Sidney Nestor came back from Italy and struck hands with a clever but somewhat erratic journalist, called Jasper Sterling, who had got the most extraordinary ideas as to what could be done by a newspaper. They had met in Rome, and Lady Sidney, instead of being offended at his rather brusque and imperious method of laying down the law as if he were a new Hildebrand, threw in her lot with his paper at the very start."

"I know he was thinking about it," said the Professor. "I also knew him."

"Oh! did you?" said Runce. "Then you know a very remarkable man, sir. I hope I did not offend you by alluding to his eccentricities."

"Not in the least," said the Professor; "even if you had said he was mad you would not have offended me. But go on."

"Well," said Runce, "Lady Sidney bought the Emancipator building on the Embankment. She paid half a million for it, and spent a quarter of a million more in fixing the whole thing up in style. She made it her headquarters, and placed one of its wings at the disposal of Sterling for his editorial offices. He had then just brought out his paper."

"Did the paper catch on?" asked the Professor.

"Catch on!" exclaimed Runce. "It is not only one paper, but a multitude. The *Daily Paper* has affiliated journals in every large town of the three kingdoms, and not only in the three kingdoms, but in every capital in Europe. Arrangements are being made to publish similar papers in all the great colonies and in the United States of America. In fact, in a few years it will be as impossible to get outside the circulation of the *Daily Paper* as it is to get out of sound of the English tongue."

CHAPTER II.

THE DAILY PAPER.

As the Professor and Irene entered the breakfast-room on Monday morning they met Mr. Runce coming out. He said, "I am going round to the *Daily Paper* office, and if you like I will tell Sterling that you have arrived, and I

will telephone you if he can make an appointment to see you. Meanwhile you had better look over the paper before you see its editor." So saying he handed them a copy of the *Daily Paper* for the morning.

"What a duck of a paper!" said Irene. "It is the first newspaper that I have seen which it is possible to read without making a mess of the breakfast table, or burying its reader from the eyes of the rest of the company."

"That would be no loss so far as I am concerned," said the Professor gallantly; "but it is the paper which you should always read."

"It is the kind of paper I always will read," said Irene. "It is just the thing I want—bright, crisp, and interesting. Oh," she said, "that is charming!"

"What is that?" said the Professor.

"Why, here are two columns devoted to housewifery, with *menus* for lunch and dinner printed as prominently as if they were telegrams from Timbuctoo or any other out-of-the-way place. Now I call that really nice. It is no good talking about papers for women unless you give as much importance to the affairs of the house at home as to the House of Commons."

"Waiter," said the Professor, "give me another copy of this paper; it is evident my wife does not intend to give hers up."

The waiter at once brought another copy of the paper, and the Professor and his wife were so absorbed in its perusal that they allowed their coffee to grow cold. Just as they had made that discovery a messenger came in to say that some one wanted Glogoul at the telephone. When the Professor returned he said, "An appointment to lunch with Sterling at the *Daily Paper* offices at one o'clock. We had better not make our pilgrimage round London to-day."

Punctually at one they were in the waiting-room of the *Daily Paper*, where their names were taken by a civil young lady, who said that the editor was expecting them and would be with them in a minute. Putting their cards into a pneumatic tube, she pressed a button. Two minutes later there came back a card on which was scribbled, "Delighted to see you. Must ask you to wait for quarter of an hour. The Russian Ambassador is with me just now—he will not be long. Meantime, if you like, Miss Derby will show you over the building."

"Are you Miss Derby?" said the Professor to the attendant.

"No," she said; "Miss Derby is the lady-guide. I only attend to the waiting-room."

She rang a bell and Miss Derby appeared. She was a lady of about twenty-five, facile, obliging, and communicative.

On being introduced by the attendant she said, "Perhaps it would be best to go to the top of the building first and then walk down. It is easier. Just step into this lift." No sooner said than done, and in five seconds the rapid elevator landed them on the roof of the building. It was a beautiful day. The tide was beginning to flow. There was just enough wind to make the flags overhead flap in the breeze. London lay below them with all its monstrosities of architecture and the dull monotony of squalid commonplace streets. But the river was there flashing in the sunlight. They were in the centre of the great arc which has the Houses of Parliament and the Abbey at one end, and St. Paul's and the Monument at the other. "You will get an even better view," said their guide, "if you come up to the *camera obscura*." So saying she led them to the lower dome which rose between the two. Here again was a lift which carried them up to a chamber where every night the immense search-light blazed, which sent a piercing ray of brilliance across Greater London. From darkness, until the paper went to press, that light ceased not

to revolve. It was not extinguished until the last forms had gone to the foundry and the machines had started. There were arrangements made for varying the colours of the light for illuminating purposes, and the rays could be depressed to any angle.

"If you were here at night," said Miss Derby, "you would see that the light makes the complete circuit of London in ten minutes. It pauses for a quarter of a minute on each of twenty buildings, which are thrown out by its ray into clear relief. These buildings are the various branch offices of the paper. The idea is that the bright ray resting on them should direct the attention of all who have any news to communicate. If they take it to the branch office it is at once telephoned to the main building."

"But unless you had very high buildings for your branch offices——"

"That is just what we have," interrupted Miss Derby. "At first we had to put up with small ones, but as the influence of the paper grew we had to establish branch offices in all parts of London. They are all built so as to show a white front of enamelled brick, and so that the ray will strike them at right angles. They constitute so many light spots in the midst of London, and each of them is in its small way for the district in which it is situated what the central office is to the whole of London."

"What is that?" said Irene.

"Oh!" said Miss Derby, "it is the social meeting-place, the free library and reading-room, and a telephonic exchange, as well as a place where any member of the Fellowship can obtain any information that is procurable in London without any charge or loss of time."

"The Fellowship!" said the Professor. "What is that?"

Miss Derby looked at him in amazement. "Excuse me," said the Professor hurriedly—producing his well-worn formula—"I have just returned from South America, where I have been for the last six years. I have very seldom seen a newspaper, and know nothing about anything at all."

"Oh," said Miss Derby, "that explains what otherwise would have been quite inexplicable. The Fellowship is an association without which the *Daily Paper*, great as it is, would have been comparatively powerless. But," said Miss Derby, "will you not come and see the *camera obscura*?"

Following her lead, they ascended a winding staircase and entered the largest *camera obscura* in the world. The artist on duty had left for lunch, and the chamber was empty.

"You see how it works," said Miss Derby, pulling the strings. Instantly the Professor and Irene saw upon the smooth surface of the table in the centre of the room a miniature reproduction of a scene on the Embankment.

Irene, who had never seen a *camera obscura* before, exclaimed, "How wonderful! How lifelike! It is like a living photograph in colours!"

Miss Derby smiled and pulled another string, and in another minute they were looking at the scene on London Bridge, with all its vehicles passing to and fro. Another change, and they saw Trafalgar Square, with its fountains and statues and the busy stream of life hurrying past.

"During every hour of daylight," said Miss Derby, "an artist is on duty here. When any accident or disturbance occurs in the city, communications are sent to her by telephone. At once she turns the camera upon the spot where the accident has occurred. Oh, by the bye, here is one of the artists."

As she spoke a lady came running upstairs, carrying a written telephonic message in her hand. Bowing quickly to those present, she cast a glance at the map of London with which the wall was papered, noted the number of one of the many parallel lines which divided the map into

THEY WERE IN THE CENTRE OF THE GREAT ARC WHICH HAS THE HOUSES OF PARLIAMENT AND THE ABBEY AT ONE END.

sections, and then, turning the camera in the direction of the number, she adjusted it in accordance with the number on the parallel line within which the street was contained on the map. "Wait," said Miss Derby, "and watch."

Instantly they saw thrown upon the table in the middle of the room a great building in which a fire was raging. Flames were bursting from the windows. A fire-escape had been placed against the wall in order to rescue a group of people who had taken shelter on the roof. It was a scene of intense excitement. The moment the picture was thrown upon the table the artist began a sketch. As for the others, they were much too interested in the fire to watch what she was doing. The fire was evidently getting hotter and hotter, flames were mingled with the smoke which was now bursting from the uppermost windows.

They could see the brass-helmeted firemen creeping slowly up the fire-escape. They were as small as ants, but perfectly distinct. The huddled crowd on the roof was straining over the parapet and calling aloud for help. They could hear nothing—that was the odd part of it. The whole scene was enacted before them as vividly as life, but in dumb show. Everything was in motion. They saw the smoke, the flames, the gesticulations of the crowd, and the upward movement of the firemen. They watched with an interest almost too intense for breathing. Great was their delight when they saw the last of the persons on the roof safely conveyed down the fire-escape. The Professor could hardly restrain himself from giving a cheer. The artist looked up in astonishment. They then glanced at her drawings. She had made a rapid series of sketches of the whole scene, which, although lacking the colour and life of the picture shown by the camera, nevertheless depicted the scene very accurately. While they were looking over her sketches she had taken another piece of paper, and was again busily engaged. The Professor turned to look at the table. There was a wonderful sight. Although it was a little after noon, the flames could be distinctly seen bursting out of the top storey and through the roof of the doomed mill. Suddenly the whole centre of the mill seemed to give way, and a great cloud of dust and flame, shot perpendicularly into the air. The artist, who was watching the progress of the fire, caught the exact moment when the roof fell in. When she had finished her sketch she turned a lever, and instead of seeing the top of the building they saw its base. There were fire-engines in the road, and fire-floats on the river, spouting streams of water upon the burning building. Firemen and policemen were busily at work, while outside stood an excited crowd.

A telephone bell rang. Turning from the instrument, Miss

Derby said, "The chief bids me tell you that the ambassador has left, and that he would be very glad if you will come down and lunch at once."

Descending the stairs into the lamp-room, they entered the lift, then got into the lift on the roof, and in a few seconds were on the basement, where they found Jasper Sterling waiting for them. After a very hearty greeting, they set out for the restaurant.

"What an odd thing!" said Irene. "I never saw before lifts worked by girls instead of boys, and what a pretty costume these girl pages wear!"

"Well," said Sterling, shrugging his shoulders, "lift-boy work don't suit well with petticoats, and so Madame Lill set to work and devised that costume in order to allow the girls to do the work. I am glad you like it."

"It is charming; so neat, so graceful, so pretty. I only wish we all could wear that costume."

"We are immensely interested in your *camera obscura*," said the Professor. "We have been watching a fire down at Southwark."

"Oh, yes," said Sterling. "It is a very simple idea; but we shall not be up to the mark until we have one on each of our twenty branch offices, then we shall be able to see pretty much everything that goes on in London."

By this time they had reached the restaurant, which occupied one wing of the building stretching to the Strand.

"What in the name of fortune," said the Professor brightly, as they entered the restaurant, "is the meaning of this? It is more like a music-room than a cook-shop."

"It is a way of killing two birds with one stone. You should always have music at dinner; it serves as a substitute for conversation, and facilitates the digestion, and, what is much more im-

portant for me, it enables one to talk confidences to one's next-door neighbour without the man at the other end of the room hearing what one is saying."

"Say, do you run this cook-shop as well as the paper?"

Sterling looked up. "Did we not fix that up before I left Rome? Oh, no, I believe it was an afterthought. The fact is that this is one of the most important branches of our paper."

"Dear me, Glogoul," said Irene, "don't you remember they were talking about that the other day when they were telling us about the pilgrimages?"

"So I do," said the Professor: "but I did not realise that it was anything like such a gigantic concern as this."

It was indeed a gigantic concern. The place was four storeys high, with an underground basement. The first three storeys were divided into dining-halls, while the top storey was reserved for the kitchens. All the cooking

A GREAT BUILDING IN WHICH A FIRE WAS RAGING.

was done next the roof. The walls were thick, so that the orchestra in one room did not interfere with the solo singer in the next.

"We have all our *débutantes* here, besides three regular bands," said Sterling. "It is very popular, and our eighteen-penny *table d'hôte* is declared by good judges to be better than what could be procured in London for five shillings before we started this restaurant. But," continued Sterling, "I am afraid we are late for *table d'hôte*; we had better go into the room where we can be served *à la carte*. There is music there also, but we can have a quiet corner to ourselves."

All the rooms were tastefully decorated with frescoes. "I never saw such beautiful fresco painting," said Irene; "they are perfectly lovely."

"Oh, that is Madame Lill," said Sterling. "She has a wonderful eye for effective decoration. If you notice, all the frescoes in this room relate to one country. It is so with each of the rooms, and there are nine halls. The subjects are selected from nine of the leading English-speaking communities. We are, at present, in the Welsh room. There are, besides, the English, Irish, and Scotch rooms. Then there are the Australian, the Canadian, and the South African rooms. Two are devoted to the United States of America—one to the Eastern States, and the other to the Western. The idea of the artists was to represent the most characteristic landscapes or views that were at all cheering and enlivening in their countries. Everything of a gloomy nature was resolutely excluded. When people eat they should not be gloomy."

"One of your panels is not yet filled," said the Professor.

"No," said Sterling, "the competition has not yet been awarded. All these pictures have been painted in connection with the prize competition offered by the paper. That is not my department; I have nothing to do with it."

"But how did your cook-shop come about?" said the Professor to Sterling.

"Oh, very naturally. It grew like everything else. When we started our cookery page, with *menus* and cookery recipes, my wife said, 'What is the good of these things to me? I have often tried these printed recipes, but the dishes never come out as they ought to; then you cannot get the ingredients, and there is always something missed out of the cookery book recipes even when they are printed in the *Daily Paper*.' That set me thinking, and I took counsel with the *chef* who prepared my daily *menus*. We decided to start an experimental restaurant for the benefit of the Fellows."

"Fellows again," whispered Irene to the Professor.

"Hush!" said he.

Sterling when talking did not take much notice of interruption. He went on: "We started the restaurant on the principle that as every thing was cheaper in England than in France, it was a scandal that we could not have as good a meal in London at least as cheaply as we could get it in France. So instead of only printing our *menus* and publishing our recipes in the paper, we established a restaurant under a first-class French cook, and made him serve at *table d'hôte* all the dishes described in the previous day's paper. Every Fellow, moreover, has the right to send his wife, daughter, or servants into the kitchen to see how the dishes are made. If you go upstairs after dinner you will find that there is a gallery all round the kitchen which is reserved for Fellows and members of their family. When a dish is being prepared a printed recipe with the ingredients is posted up above the cook's head so that all can see what is going on. It is quite astonishing what improvement this simple arrangement has made in English cooking. We have this place here where we serve about two thousand

lunches every day and about three thousand dinners and suppers. But it is strictly confined to Fellows and their friends. We do not cater for the general public."

"Do tell me, Mr. Sterling, what is a Fellow and who are the Fellows," said Irene.

"Fellows?" said Mr. Sterling. "Oh, that is another story; I will tell you that some other time. But do eat something. I am just a little tired, but I shall be all right directly."

"Do you notice," said Irene to Glogoul, "that every waiter in this place is a woman; and what a delightful costume they wear! It is not quite so pretty as that of the page's, but what a contrast to the glaring aprons and dowdy dresses one sees at the Duval restaurants."

"Yes," said the Professor; "but have you seen the notice that is printed on the back of every *menu* card?"

Irene had not, but she turned it over and read:—

"All tips or gratuities are rigidly forbidden. Any attendant who is offered money without immediately reporting the circumstance to the director will be instantly dismissed; and any Fellow reported as having tendered a gratuity to any of the attendants will be at once struck off the roll of the Fellowship, and debarred from all the privileges of that society for the space of one year."

Just at this moment a quartette came upon the dais and began to sing a charming little musical piece. "They are rehearsing for the fête," said Sterling. "They are singing a part of the cantata which is to be one of the features of the river masque. Their voices sound very pretty."

"And yet it will sound even prettier," said Irene, "when it is sung to the plashing of the oars." When the quartette was finished, the visitors indicated their pleasure by hearty but subdued applause.

"You will be surprised," said Sterling, "what a number of applications we have for permission to sing here. Every *débutante* who can sing, or imagines she can sing, always applies for permission to sing before our Fellows. Long experience has made them a rather critical audience, and if any *débutantes* have the approval of our English room, which prides itself upon its critical and cultured company, their career is pretty well secured. But," he said, "we had better go upstairs to the smoking-room."

Entering the lift they found themselves almost immediately on the roof, which had been converted into a beautiful garden. In winter the hall was enclosed in glass. In summer the side walls were removed, but the graceful iron balustrades gave the sense of security without impairing the idea of being in the open air. No more pleasant addition could have been devised high above the roar of the street and free from the interruptions below.

"But did you not say that the cook-shop was at the top?" said Irene.

"Yes," said Sterling, smiling.

"But I cannot smell it."

"No," said Sterling, "we took special care to prevent that. But perhaps you would like to look over the kitchen while we have a cigarette?"

Irene was handed over to one of the attendants, who took her round the gallery, where ladies and their servants were watching the preparations for dinner. She noticed that most of the assistants in the kitchen were very refined people, and she remarked this to the attendant.

"Yes," was the reply, "they are most of them daughters of professional men. They will make more money in this profession than in any other that is open to them. They would gladly pay premiums, but no premiums are taken. They receive free training in return for their services."

"How does the thing go?" said the Professor to Sterling.

"Oh, first rate," said he. "Better than I expected even

in my most sanguine moments. But that of course is due to Lady Sidney. I never contemplated for a moment that I would have such an immense reinforcement as she has brought me. Without her I should have done fairly well; with her we practically run the machine."

"What machine?" asked the Professor.

"Pretty well all outdoors," said Sterling, smiling.

"Tell me how it all started?"

"Oh," said Sterling, "it started easily enough. I got my dew upon my fleece. I got my 100,000 subscribers and set to work to found the paper. I had hardly started when Lady Sidney came from Rome and renewed her offer. I placed the whole of the financial department under her control. That, if you remember, was her idea. She was to be the St. George of modern times, with the sword of brightness, and the paper which I was to found was to be her steed on which she was to ride forth conquering and to conquer."

"You could have done nothing without her millions, I suppose?" said the Professor doubtfully.

"You are quite wrong," said Sterling. "The success of the paper is due, not to her millions but to the Fellowship."

"Always this Fellowship! You pique our curiosity terribly. What is a Fellow?"

"Oh, the Fellowship!" said Sterling; "that is another development of Lady Sidney's gospel that two and two make four. That was due to a very clever young fellow, Dick Grant, whom I also met in Rome, and who is in training for the assistant editorship. Her idea of that mystic formula, which you will notice is painted over the entrance to our City office, seemed to her merely to have a negative significance—that is to say, its meaning was that two and two made four, and not five or three. But it seemed to Grant to have another sense. That two and two make four seemed to him to inculcate the increase of power which arose from the combining of small numbers. I had no sooner got my 100,000 subscribers, than it occurred to him that we might be able to raise up from among them a body of men and women who would be willing to pay a penny a day for purposes of public beneficence. The idea caught on. We began with a membership of ten; before the year was out we had fifty thousand members, and at present how many Fellows do you think we have scattered over all the world?"

"I am sure I don't know," answered the Professor.

"Five hundred thousand," said Sterling. "Each of them pays a penny a day for public purposes, which are approved of and printed from time to time in the *Daily Paper*. That represents an income available for public purposes of £750,000 a year. The formula was, 'Who will spare a cigarette a day in order to underpin the empire and develop the amenities of life and make the world a better place to live in, first for the Fellows, and then for their fellows?'"

"It is a great idea," said the Professor; "but how do you work it?"

"Very simply," said Sterling. "Every Fellow undertakes to contribute a penny a day, and to transmit it to the office every quarter. If the subscription is a week overdue, the Fellow receives notice that his subscription is due, and if he has not sent it in in another week he is struck off the roll of the Fellowship. But the advantages are so great that very few sacrifice their membership."

"£750,000 is a great deal of money. What do you do with it all?"

"Oh, there are no end of ways of spending it. It is divided into four portions. The first, imperial; the second, philanthropic; the third, artistic; and the fourth, recreative. For instance, the great Olympic Festival with which we are going to inaugurate the dawn of the twentieth century is entirely paid for out of the Fellowship funds."

"Has the Fellowship any specific views?"

"Certainly," said Sterling. "The Fellowship, roughly speaking, tries to forward everything which is advocated in the *Daily Paper*."

"Oh, I understand," said the Professor, laughing. "And the *Daily Paper* was founded in order to advocate your views."

"Not exactly; but your humorous exaggeration has a kernel of truth. The fundamental principle in dealing with the Imperial fund is to keep it in reserve in case of emergencies. That is to say, if it were urgently needed to annex an island, reinforce a garrison, or subsidise a chartered company to tide over a crisis until Parliament could be roused to a sense of its duty, the Fellowship Fund could be drawn upon, and we have more than once done this with immense effect. In philanthropy the opposite principle is resorted to. It is chiefly spent in making grants to associations and individuals who will undertake to raise a certain amount of money for the advancement of certain objects. That is to say, if in any town a local society would undertake to raise £500 for the erection of drinking fountains, we would grant them £100, and so on in proportion. Here also the principle is that the fund is to be used more to start things than to maintain them."

"What do you do in art?"

"Oh, there is the drama, there is painting, and there is music. But beyond saying that we have founded a National Theatre, and are rapidly bringing into existence diocesan troupes in every part of England, I will not say anything more about it at present. In painting we have founded a school of miniature painters for the production of lantern slides, so that the masterpieces of the world's painters may be made familiar in the villages in every part of the empire. By the bye, before you go I must take you to see our loan library of lantern slides. It is a gigantic concern, and much appreciated by Fellows in every part of the world."

"And what about recreation?" asked the Professor.

"Oh, recreation! You have seen the preparations for our naval fête on June the 14th. That is only one of a multitude of methods by which we are endeavouring to bring merry England back again. There are few things of which we are more proud than the success which has attended the acclimatisation of the German beer garden in England. It is an immense success, and if we could only modify the English climate it would be even more so."

"I am afraid that that is even beyond the power of the Fellowship," said the Professor.

"Who knows?" said the editor. "We have not yet abandoned hope of doing even that."

CHAPTER III.

THE CAMPAIGN OF ST. GEORGE.

STERLING had hardly finished his coffee when a messenger brought him word that he was wanted immediately in the sanctum. The newly-appointed Viceroy of India had just called to pay his respects and take leave.

"Ask him to wait a moment," said Sterling; "I will be there directly. I know what he wants to see me about, but he ought really to see Lady Sidney. There is a suspicion of some great corruption in one of the Indian departments, and there has been much talk of sending one of our St. Georges to investigate the whole thing. But if you care to wait I will polish him off in a quarter of an hour. Meantime, you and your wife might like to see round our reception-room, where Lady Sidney holds her receptions twice a week."

Descending from the roof, they entered the main building.

where the Professor and Irene were handed over to another lady guide, who conducted them up a splendid marble staircase to Lady Sidney's *salon*, as her reception-room was usually called. The *salon* was a large room in the centre of the building, looking out over the Embankment Gardens, with a great many nooks and corners in which groups could converse without being interrupted by the general movement of the rest of the visitors. "Lady Sidney," said their guide, "is very particular that, with the exception of the walls and the furniture, nothing should be the same for more than a week at a time. Every week the contents of the *salon* are changed. It has just been done up for the reception to-morrow night. In that recess you will see the diploma work of one of the most promising of the Canadian artists. The honour has been accorded him of exhibiting it here for one week. Next week its place will be taken by a painting by some other artist."

"But can you always get good pictures?" asked Irene.

The guide looked at her in astonishment. "We have the whole world to draw upon," she said, "and there are only fifty-two weeks in the year. It is regarded as a much greater honour to have your picture exhibited in Lady Sidney's *salon* than to have it hung on the line in the Royal Academy. On the tables you will see nothing but the books which have been published in the last few days. There are to be found also the latest magazines and photographs. In another of the recesses you will find the latest models of scientific inventions. In fact, everything is here that is thought worthy of being described in the *Daily Paper*. But," said she, "there is the telephone-bell." Returning, she informed them that the Viceroy had gone and that the Chief wished to see them at once.

Leaving the reception-room they made their way to the *sanctum*. Over the door was the inscription taken from the sermon by which Carey founded British missions—"Attempt great things for God. Expect great things from God." It was a bright room looking out over the Thames. At the desk was a speaking-tube connected with a dozen different departments, while by a telephonic system the editor could at once communicate with any one in the main building, or in any of the twenty branch offices. Close to the desk was a revolving bookshelf, while the walls constituted a veritable museum. It was an octagonal building. One of the octagons was occupied by the door, while two others were devoted to the windows. The desk filled a fourth. The four remaining octagons were each devoted to one of Sterling's patron saints. The statue of the saint occupied the slight recess in the centre. Round the saint were grouped relics. The central place was devoted to Oliver Cromwell, the statue being surrounded with portraits and miniatures of the great Protector. The companion panel was devoted to Jeanne d'Arc, while the third was occupied by General Gordon. In the fourth there was an exquisitely painted picture of St. Mary Magdalene. Immediately over the editor's desk stood a miniature reproduction of the crucifix which hangs over the screen in Lucerne Cathedral.

"I am a great believer in relics," said the editor. "No one who has studied psychometry can doubt their influence upon certain susceptible persons, and therefore it is reasonable to think their influence may be exerted in a lesser degree on those who are not so gifted. I like to surround myself with the relics of those whose character I most admire and whose exploits I should most desire to imitate. I also think there is a certain influence which comes from portraits. But this is my own room; just look at the reception-room!" So saying, he led them into an adjoining room on the right.

This also overlooked the Thames Embankment, but it was much more luxuriously furnished than the *sanctum*. Books

and papers lay about on the settees. One or two striking pictures hung on the walls, and there was no pleasanter place in which to spend half-an-hour. When Sterling was showing them in, the door opened and a messenger appeared, and the Governor of the Bank of England was ushered in.

"Just one moment, Mr. Sterling," said he; "I merely called to express my heartfelt congratulations for the victory which you have gained in the courts."

"Why?" said Sterling brightening; "is the verdict all right?"

"Yes; the jury did not even leave the box. The verdict was greeted with cheers by the crowded court, which the judge did not so much as attempt to repress."

Sterling flushed slightly, shook hands heartily with his visitor, and then returned to the *sanctum*.

"May I ask," said the Professor, "what is the trial to which you referred?"

"First sit down," said Sterling, "and I will tell you all about it. It is the climax of a long series of actions which have been brought against us by the scoundrels whose trade Lady Sidney has pretty well destroyed."

At this point the bell rang, announcing another visitor.

"Excuse me a minute," said Sterling.

A minute later he returned. "It was Lord Rothschild, who also came with his congratulations. I have told my son I cannot be worried with any more congratulations; he can receive them. It is enough to have won the case, without having the whole town here to congratulate you."

"But," said the Professor, "tell me about this action."

"Sit down and make yourself comfortable. I shall not be disturbed now," said Sterling, locking the door. "Now I will tell you all about it."

Again the bell sounded. "What is the matter?" said Sterling testily.

"The Prince of Wales is here to present his congratulations," said his son.

"Oh! the Prince of Wales!" said Sterling. "He had better see Lady Sidney. I daresay she will not grudge him a few minutes."

"In order that you should understand the significance of this action," said Sterling, "I must tell you how Lady Sidney has carried out her idea of doing something to put a stop to the wholesale swindling which used to disgrace finance. We began very modestly. We got the best city editor we could. He was a man who could not write a line; but he knew all the ins and outs of the Stock Exchange. He had the instinct of a detective, the tenacity of a sleuth-hound, and a phenomenal memory. We were most fortunate in laying our hands upon him. He could give you the history of every person who was engaged in company promoting, or in all the more or less fraudulent enterprises of the age, running off on his fingers exactly what companies they had floated, how many of their concerns had liquidated, and how many were still in existence. He was thoroughly incorruptible, and entirely shared Lady Sidney's hatred of the predatory class. We attached to him a couple of smart graduates, who knew little or nothing about finance, who could put facts in a crisp telling way without going a syllable beyond their brief. You will have seen that our City article has a permanent pillory at its head, in which the principal financial offender for the day is put up for the execration of all men. You will also see that we have got rid of the whole of the conventional City report which appears in the other morning papers. We laid down the rule from the beginning that any person who appealed to the public for money in any speculative concern, or any institution, society, or other form of investment, ought to be able to satisfy an impartial investigator that there was at least a *prima facie* case that the investment yielded

a dividend. Hence whenever any company was floated or loan issued, certain indispensable information was insisted upon, and until it was forthcoming all investors were warned against risking their money in the concern. At first company and loan promoters scouted the idea of a newspaper presuming to dictate to the investor as to the securities in which he should put his money. But by-and-by they all came in, one after the other, and as a result you will see that before any stock is issued the promoter will beg to be heard by our Rhadamanthus in order that he may prove the *bona fides* of his venture. There is nothing formal about this hearing. The promoter brings down his papers, which are handed in for examination; then he makes his statement, and he is cross-examined on it by our *advocatus diaboli*. Of course, there was only one man in London who could fill that post to perfection, and that was Mr. A. J. Jackson. It's simply magnificent to see the way in which he will turn inside out the pretensions of the speculators. He would not have been so excellent as a judge, for he is inclined to pessimism, but he is simply ideal as the prosecuting counsel. After a full and fair hearing our Rhadamanthus pronounces judgment. He does not of course guarantee that the stock will yield a dividend; all that he certifies is that the promoters have or have not satisfied him as to the *bona fides* of their proposals, and if they have not he specifies in plain Saxon exactly what information is lacking. The promoters who could not obtain a favourable verdict from our editor, very soon found that they had little chance of getting money from the public. Of course they were furious and threatened prosecutions right and left, but I engaged Sir George Lewis from the first as my legal adviser. One of his cleverest clerks took up his abode permanently in the City office for the first six months. We were threatened with a lawsuit a week, and we had to fight one a month. But although there was a good deal of worry, and we lost one or two cases from inexperience and excessive zeal, Lady Sidney had not to stand the racket of more than £10,000 legal expenses for the first year. Never was money better spent, for every pound that Lady Sidney expended she saved the honest investor a hundred."

"But," said the Professor, "I always thought that fraud in new stock was comparatively small when compared with the fraudulent existing companies."

"Quite so," said Sterling. "That is the case. Our city editor undertook to give the opinion of the best and most impartial authority as to the value of any existing stock. Any reader who had any money in any stock had simply to write to the editor of the city department to be told, either in the columns of the paper or by correspondence, exactly what reasons there were for believing his stock valuable and what grounds there were for distrust. This led to further developments. The inquiries from investors increased to such an extent, that it was found necessary to appoint a special staff. In order to be more secure against the risk of libel, advice as to the solvency or otherwise of private firms was restricted to members of the Fellowship, any one of whom could obtain the black list of securities in which no wise man would allow his money to remain, together with the reasons for such an adverse decision. Of course, to carry this out involved great organisation and great outlay. Lady Sidney simply gave us *carte blanche* to draw upon her to any extent. Hence when any foreign state was suspected of desiring to issue a new loan, we dispatched a competent special commissioner to ascertain upon the spot everything that could be said against the solvency and the security, and until his report was received the ordinary investor got into the habit of refusing even to consider the stock which was offered him. But Lady Sidney's efforts were specially directed against those societies which, like the Emancipator,

had preyed upon the industrial community. A special department dealt with Friendly Societies and the funds of Trades Unions. For a year or two the mortality among these societies was terrible, but in the end the rotten sheep being killed out, a few staple concerns remained, and I think we can fairly say," said Mr. Sterling complacently, "that with one or two exceptions, Lady Sidney, as St. George, has fairly slain the dragon which used to be the bane of the country. Another department which soon attracted our attention was the corruption in local administration. One or two cases in which gross jobbery was detected and pilloried in the *Daily Paper* struck such terror among the municipal and provincial jobbers that the mere rumour of the arrival of a St. George, as our agents came to be known, was enough to make the corruptors and the corrupted quake in their shoes. It was in this connection, I may say, that the Viceroy of India just called. I have agreed to allow one of our St. Georges to accompany him to India to conduct an exhaustive and searching investigation into the real state of the facts."

"But does not this lead to espionage?" asked the Professor.

Sterling shrugged his shoulders. "When any man asks another man for his money, or when any man takes another's money by force of the police and tax-gatherer, that other man is entitled to find out all that he can as to his chances of getting value for his money, and of knowing that it has been spent in the public service."

"But did you not have great difficulty in keeping all the threads together?" said Irene.

"It would have been difficult for most people," said Sterling. "But Lady Sidney has marvellous powers of organisation. Once a week she has her financial dinner party, to which are always invited the city editor, his *advocatus diaboli* Jackson, and any of the staff who may have just returned from a confidential mission. In addition to these there are standing invitations to those Government officials who, until her advent, were constantly lamenting the lack of sufficiently strong public opinion to suppress jobbery. There is, for instance, the Inspector General of Bankruptcy, the head of the detective department at Scotland Yard, the Registrar of the Friendly Societies, and others who might be named. The Governor of the Bank of England and the Chairman of the Stock Exchange Committee also look in occasionally. Mr. Labouchere is always a welcome guest. These dinner parties bring together the best men interested in this subject. Many and many an Act of Parliament, which has struck terror to the hearts of the evildoer, has been hatched after dinner as the result of an informal conversation between Lady Sidney and her guests. As you can imagine, such relentless warfare carried on against corruption and swindling excited immense indignation among the predatory classes with whose plunder it so rudely interfered. After a time, when the objects and aims of the campaign of St. George came to be more clearly understood, our lawsuit a month dwindled down to one in three months. But we always knew that we should have to face a much more serious attack from the threatened vested interests. It was some time in taking shape, but at last a great purse was formed—of £100,000 it was said—for the purpose of prosecuting the *Daily Paper*. A very strong article appeared reflecting upon the frauds of a well-known promoter in the City, and, more particularly, upon the nature of the stock which he was endeavouring to float. Damages were laid at a quarter of a million, and the lawsuit was begun, which has just terminated fortunately for us. It was a very costly business. Nearly all the witnesses had to be brought from Australia. Many of the most important witnesses had

disappeared, and had to be hunted across the world by detectives. But Lady Sidney never flinched. She said, 'This is the final rally of the dragon.' The result is, that after a tremendous fight we have obtained one of the most decisive victories which any one could have hoped for. We not only smashed the witnesses for the prosecution in cross-examination, but we brought overwhelming evidence under every head, collected with the greatest care from every country under heaven, showing the utter worthlessness of the fraudulent stock which was being offered to the British public. Sir George Lewis never did anything like it since he exposed Pigott. Even now it is not finished; we have applied for the arrest of the principal witnesses on the other side on the charge of perjury, and the man in whose name the action was taken against us is already in Holloway, waiting trial on the charge of forgery. After this I think we shall get into clear water."

NEDELCA.

"How much do you think it will have cost?" asked Irene.

"The trial?" said he. "Oh, I do not think it can have cost Lady Sidney a penny less than £150,000."

The bell rang. "Who can that be?" said Sterling. "Oh," he said immediately, as he pressed his ear to the tube, "it is Lady Sidney. She is in her own room. I must take you with me to pay your respects."

CHAPTER IV.

LADY SIDNEY MÆCENAS.

STERLING led the way to the other wing of the building. They passed the head of the stairs which led to the Reception Room, and turned to the left. They soon came to Lady Sidney's room. It corresponded to the editorial sanctum in the other wing, but in other respects it was as different as could be. Above the door was the legend "Two and Two Make Four." Sterling shook hands with her cordially.

"Well, St. George," said he, "I think you have slain the dragon at last."

Lady Sidney seemed to Professor Glogoul to be more beautiful than ever. She looked up proudly.

"Yes," said she, "it was a great victory. The office has been crowded with visitors bringing their congratulations."

"Yes," said young Sterling, who had joined his father on the way. "I have just come to give you their cards. It is extraordinary what interest this case has excited. I have telegrams from the Tzar, the Cardinal Secretary of State at the Vatican, the German Emperor, the President of the American Republic, and even from the Sultan. The Prince of Wales has just left Lady Sidney, and you saw the Governor of the Bank of England yourself. I saw the Prime Minister and the Leader of the Opposition, who both expressed their intense satisfaction at the result. In fact, they all say never was there a greater victory more brilliantly achieved in the cause and interests of truth and honesty. Mr. Chamberlain, the Prime Minister, was extremely cordial."

"Joe Chamberlain Prime Minister!" exclaimed the Professor in surprise. "How the world has changed!"

"But permit me to introduce to you Professor Glogoul and his wife," said Sterling. "You knew the Professor at Rome, Lady Sidney?"

"Of course I did," said Lady Sidney, advancing and grasping him warmly by the hand. "And this is Mrs. Glogoul. Where is Nedelca?"

She pressed a button thrice, and in answer to the summons Nedelca appeared. The Professor could hardly believe his eyes. What a change the last few years had wrought! When he was in Rome Nedelca was a child, now she was a magnificent woman of twenty-one, a reproduction in almost every feature of her mother. The moment she saw Glogoul she ran up to him and exclaimed, "Oh, my dear Professor, where have you been during all these years? How often I have thought of what you said to me that day at the Colosseum. And this is your wife? I am so glad to make your acquaintance, Mrs. Glogoul; I quite envy you your husband. He is about the only man I have ever seen whom I would have cared to have married."

"Nedelca," said her mother, "you never told me that."

"Nor me either," said the Professor. "But if you had," he added prudently, "it would not have made any difference, for I have the best little wife in the world. Permit me to introduce her to you."

"Now," said Lady Sidney, "we have no time to lose. I have to be at the National Theatre to see a new play by one of our rising dramatists. We shall be delighted if you can come with us, Mr. Sterling."

"Not I," said Sterling, "I have to meet the Lord Chancellor and the Archbishop of Canterbury at the House of Lords in half-an-hour to draw up the deed for the Endowment of Charwomen."

"What did he say?" asked Irene, as Sterling closed the door behind him; "the Endowment of Charwomen?"

"Oh," said Lady Sidney, "that is easily explained. Nothing stands so much in the way—our experience of the last dozen years has taught us—of the utilization of public buildings for public purposes as the small but appreciable expenditure needed to secure their cleansing after they have been used. We have, therefore, decided that a certain portion of the Fellowship Fund, which is devoted to philanthropy, must be set apart for the Endowment of Charwomen, to remove an obstacle that stands in the way of the use of churches and schoolrooms for the service of man. But come, let us go to the theatre. Nedelca, where is Lill?"

"In her own room, getting ready," said Nedelca. "She will join us in a minute."

As she spoke the door opened and Lill came in. Lill was now forty-five, and Lady Sidney and she standing side by side might have been accepted as two perfect types of contrasted beauty. Lady Sidney was fair, Lill dark, with dense black hair. They stood at the threshold of the dawn; behind them might be darkness and shade, but before was the light of noonday.

"Lill," said Nedelca, "here is my old friend the Professor, of whom you have heard me talk so often. This is his wife, whom we have never seen before."

"But whom I hope we shall see a great deal of," said Lill, taking Irene's hand.

"Come," said Lady Sidney, "we must go."

"The National Theatre?" said the Professor, as he walked down stairs with Lady Sidney. "What theatre is that? It wasn't opened when last I was in London."

"Oh, dear me, no," said Lady Sidney. "The National Theatre was only opened last year. But we are very proud of it, and expect it will do wonders in developing the native dramatic talent of the English-speaking world."

"I know it has long been discussed," said the Professor. "But how did it come into existence?"

"We brought it into existence first in the columns of the *Daily Paper*," said Lady Sidney, laughing. "As there was no National Theatre in fact, we said that we would construct one in imagination. So we constituted a Committee of the National Theatre, reported from time to time its decisions, and published every week the plays that would have been performed if the theatre had really existed. Of course this was pure imagination. But in time people began to take more interest in reading the reports of the National Theatre, which did not exist, than the reports of the real theatres. After a time it was mooted in the Fellowship that as it seemed hopeless to pray for a State-subsidised theatre, the Fellowship itself ought to establish a National Theatre. There was a good deal of discussion, and as many of the Fellows objected to the use of the fund for that purpose, it was determined to appeal to the Fellows separately to form a National Theatre fund. Twenty-five thousand Fellows guaranteed to cover the founder of the National Theatre against loss to the extent of £1 per annum for ten years. Each guarantor, however, had had £1 worth of tickets to the National Theatre for himself and his friends. In this way we have secured a guarantee fund of £25,000 a year for ten years, and, what is more remarkable, judging from last year's success, I do not think we shall have to use a penny of it. The widespread interest excited in the theatre by reporting it, as it might be, before it came into existence, secured its success. Now we have a theatre established for the cultivation of English drama, which even in its infancy will not compare unfavourably with the *Comédie Française*."

As the carriage drove past the National Liberal Club, and stopped opposite the building which occupied the place of the United Service Institution, Irene exclaimed, "What a splendid edifice it is!"

"Yes," said Lill, who accompanied Irene in a second carriage. "Lady Sidney took an immensity of pains to get a building that would combine all the advantages of the best theatres in Europe."

"Then, did Lady Sidney build this herself?" asked Irene.

"Yes," replied Lill. "She is the sole proprietor; but the control of the theatre is entirely in the hands of the committee selected by Lady Sidney and the representatives of the Guarantee Fund."

As soon as they were seated the performance began. Besides her ladyship's party, all the members of the committee were present, as well as a few foreign critics. There

were also there the directors of the various diocesan troupes which were being formed in various parts of the country. The committee had already read the play. It had pleased them, and they had ordered a trial representation. It was put upon the stage with as much painstaking and care as if it had been a first night's performance in a crowded house. The play was one of the historical series by which it was hoped to complete the *répertoire* of the English drama, so that it would be possible to put the whole of the leading incidents of English history upon the stage. Disregarding the fact that Shakespeare had already dealt with the character of Jack Cade, or possibly on account of the way in which he had been treated, the author had made Cade the central figure of his drama, in which the influence of Ibsen was clearly seen. The conversation was as smart as that of a French comedy, but the underlying note was that of solid English common-sense. The play was full of strong situations, and the verdict of the committee after its reading was confirmed.

Lady Sidney was not quite satisfied. She said, "The author calls it 'Jack Cade: a Play of the Fifteenth Century,' but he never allows his readers for a moment to forget the twentieth century and the social struggle through which we are passing. Still, it is a play which will not only interest but will make people think."

"Yes," said Irene, "and make them cry. I think the closing scene was wonderfully pathetic."

"Irene," said the Professor, "has got hold of the true test. A tragic play which does not wring tears from the audience is not worth a cent. From that point of view this play is good; but that is not everything. Why should you make Jack Cade's captains, and for the matter of that the noble lords on the other side, talk as smartly as if they were professional wits in a Paris *salon* fencing for fame?"

This conversation was broken short by the appearance of the author, who was brought forward by the director to receive Lady Sidney's compliments and congratulations. She praised his play, and invited him to dinner during the following week.

"Now," said she, "if I am not tiring you, we have just time to drive round to the Conservatoire and hear the music for the river masque which is to take place next week."

Nothing loth, the Professor and Irene entered the carriage and drove off.

"Who were the other people present?" asked the Professor.

"Oh! those were the directors of the diocesan troupes which are being formed under the auspices of the bishops in the various dioceses. Not episcopal bishops, you understand, but civic bishops."

"Civic bishops!" said Glogoul. "What is a civic bishop?"

"Oh, we maintain that the civic bishop is the proper representative of the historic episcopate, much more so than the ecclesiastical bishops, who only attend to one side of life, whereas the civic bishops have a much wider sphere."

They were soon at the doors of the Conservatoire, which had been built on the site of the old Aquarium. The concert hall was one of the largest in Europe, and everything was on a scale of unsurpassed magnificence.

"Is this also a Fellowship affair?" said the Professor.

"Certainly," said Lady Sidney.

"But, I suppose," said Irene to Lill, as she overheard the remark, "Lady Sidney built this as well as the theatre."

"Yes," said Lill, "she thinks she ought to give things a fair start."

"What music do you teach here?" asked the Professor.

"Everything," said Lady Sidney, smiling, "from the composition of an oratorio or an opera, down to street singing."

"To me," said Lill, "the street singing seems to be the most important."

"Well," said Lady Sidney, "we have at least attempted to organise street singing on a systematic basis."

"The proper thing," said the Professor, "is not to provide music only in the parks; for it is wanted still more outside the parks."

"Precisely," said Lady Sidney; "and that is what we have endeavoured to do by the organisation of our singing and instrumental bands. We have the whole of London divided up, so that there is not one street in the poorer residential quarters where a thoroughly competent certificated band, vocal as well as instrumental, does not give an open-air concert at least once a week. Special arrangements have also been made to visit the docks and the great industrial establishments at the dinner hour. It is surprising, the immense popularity of these bands."

"Are all of these bands professional?" asked the Professor.

"Partly professional, partly not. Owing to the high standard that we insist upon before any one is admitted to our bands, any one so admitted is pretty sure to be able to secure what situations are going. Besides, we are creating such a demand for music and musical entertainments that even this establishment is unable to cope with it. The rule is that our bands have three days a week of public duty, the other three days they can hire themselves out. Some do not hire themselves out, but simply go singing in the better-to-do quarters, and manage to raise more by collections than they could by a regular engagement."

Nedelca turned to Irene and said, "Do you not think it is a beautiful idea of mother's that the more you fill human life with music and song the more it becomes like heaven?"

"Or at least," said Lill, "like the woods in spring time, which is quite as beautiful and a much more conceivable thought, at any rate for people like me."

They had seated themselves in the auditorium and were listening to a splendid voluntary which was being rendered on the organ by the organist of the Conservatoire.

"The organist," said Lady Sidney, "reminds me of one piece of work of which we are very proud at the Conservatoire, and that is the utilisation of church organs. It has always seemed to me a shame that the organs of our churches and chapels should keep the divine angels of melody and harmony imprisoned in their pipes for six days out of the seven. Much remains to be done, but at the present moment there are three hundred churches and chapels in London which give organ recitals at the dinner hour. We have succeeded in inducing the ministers of those churches to lay it upon the consciences of their congregation to provide for these performances, and it is surprising the amount of unused musical talent which has thus been brought into useful service. We have, of course, to contend against the objection of the dirtying of the churches, but we hope to get over that, as you have heard, by the Charwomen's Endowment Fund."

By this time the voluntary had ceased, and the singers in the cantata had taken their places on the stage.

"How do you select your pupils?"

"By the simple system of examination in every public elementary school in the kingdom. There is a badge of honour, very trifling in value, but very eagerly competed for, offered to the most proficient pupil in music in each school. In each county the civic bishop makes his circuit, he is accompanied by a musical director, and from the winners of the badges they select about three hundred every year, who are provided with small scholarships of £30 to enable them to come up here for training. All tuition is free, and the £30 enables them to pay their railway fare and

their board and lodging during the nine months the classes are open. The director selects the pupils, to whom he gives a scholarship. Thirty of the most brilliant pupils of the three hundred are then put through a three years' course, so that we have always ninety pupils undergoing the regular tuition. These thirty are allowed to follow whatever branch of music they wish."

"But where, in the name of fortune," exclaimed the Professor, "do you get all the money to carry it on?"

"The Fellowship Fund," said Lady Sidney, smiling; "but it is not so much after all, if you come to think of it. Three hundred pupils with £30 scholarships is £9,000 a year; ninety pupils who go through the higher branches, say £50 a year, £4,500, or about £15,000, that is all. The cost of the professors and the maintenance of the establishment can be put down at another £5,000, or £20,000 a year in all. The result of this combined effort to raise the standard of popular music is such, that if a German band of the old sort were to appear in one of the lowest streets of the East-end of London, they would be pelted out of the district with mud and cabbage-stalks."

"But what have you done with the barrel-organs?" said the Professor.

"They have not been neglected, I can assure you. Every barrel-organ grinder has to take out a licence, which is granted to him on two conditions; the first of which is that his organ has no false notes, and the other that at least once during the year he will play in the neighbourhood of a prison at the hour of exercise."

"Oh, that is Sterling's idea," said Lill, laughing. "He has about as much ear for music as a door-post; but he always declares that the day he heard a barrel-organ playing when he was in gaol was as if a door had been opened in heaven."

"On Bank Holiday we have a parade of barrel-organs," said Nedelca, "and really some of them are instruments to be proud of."

"I should have mentioned," said Lady Sidney, "that in addition to all this musical training, twenty pupils are annually sent abroad to finish their studies at the best schools on the Continent. In addition to those who are trained free of cost and provided with scholarships, there are the private pupils who pay, and their fees go a long way towards meeting current expenses. In time we hope that the institution will become self-supporting. Fellowship grants are never intended to be anything but a send off. They help an institution in its infancy, but they do not undertake to wheel it about in a perambulator all its days."

The cantata was very pretty, and the dresses of the performers were minutely criticised by Lill, who had that department under her care. At its close the leading performers and the author of the cantata were duly presented to Lady Sidney.

"She is quite like a queen," said the Professor to his wife, "but instead of being a queen above the people she is a queen among the people."

CHAPTER V.

THE MODERN INFERNO.

FROM the Conservatoire the Professor and his wife went back to the hotel. Lady Sidney, Lill, and Nedelca hastened back to the Emancipator building to dress for dinner. Monday was Labour day, as Tuesday and Thursday were reception days. Wednesday was Parliament day, Friday was the day of St. George, and Saturday the day of the Civic Church. Sunday was the only day on which Lady Sidney neither received nor dined publicly; she reserved it

for her private friends. Lady Sidney always presided over these dinners. When Sterling was able to come he sat at her right hand. Nedelca and Lill attended the receptions, but did not as a rule put in an appearance at the dinners. Lady Sidney had her private dining-room immediately under her office. It was a small room which would not seat more than twelve, and seemed well filled with half that number. The orchestra was out of sight. But the music at Lady Sidney's dinners was regarded as at least as important as the *menu*. The dinner was always served from the Fellowship restaurant, and never cost more than three and sixpence per head, including wine, of which very little was drunk, and that only of the lightest kind. At dinner the conversation was more or less general. After dinner, however, the company adjourned to Lady Sidney's room, which was a delightful compromise between drawing-room, smoking-room, and conservatory. Here the company remained, discussing affairs, for two or three hours.

In this discussion forum, as Lady Sidney used to call it, every word, whether in jest or earnest, was recorded by the phonographs, four of which were placed in recesses out of sight, but so arranged as to catch every sound in the room. The moment the company dispersed the phonographic records were taken to the typing-room and transcribed, and copies of the conversation were forwarded before midnight to all those who had been present. If after perusing the transcript they found that they had imperfectly expressed themselves or missed any vital point, they were expected to supply emendations, and to return the copy by post. After all the corrections had come in, a new and revised copy was re-typed and added to the archives of the paper. In this manner was collected and rendered available for reference the opinions of the best-informed men upon the state of affairs from day to day. As the archives were confidential, and all communications privileged, there was thus stored up masses of information, which would not otherwise have been available, for the writing of history.

Next to the day of St. George, Lady Sidney was most interested in Labour day. Sterling was usually present, and there was not a single Labour leader of note, at home or abroad, who had not taken part in the discussions in Lady Sidney's forum. The Labour Question had been dealt with by the *Daily Paper* from the very beginning in a fashion which showed how very much more of a Churchman Sterling was at heart than a journalist. Instead of regarding strikes and lock-outs as material out of which readable copy could be manufactured, he set himself from the first to organise an informal Court of Conciliation and Arbitration. He secured the services of a tried and trusty representative of Labour, and a no less trusted representative of Capital, both of whom before being labourer or capitalist were just and honest men; men who, as Lady Sidney used to insist, knew that two and two made four, and would not say that it made more or less, no, not even to please King Demos himself. To these was joined an industrious and capable secretary, and Sterling was delighted to secure the services of Dick Grant for the post.

When it was the question of a woman's dispute, Mrs. Fawcett was added to the trio, and Miss Irwin acted as co-secretary with Dick Grant. Dick Grant and Miss Irwin were attached to the Labour staff of the *Daily Paper*, and kept the Labour Bureau. This office prepared indexes of all available information on Labour subjects, and were in constant communication with the Ministry of Labour, which had been established by Sir John Gorst in the Salisbury Government in 1895.

Immediately a strike or lock-out was threatened in any district, the two arbitrators of the paper went down, not as arbitrators but simply as special commissioners, accompanied

by the secretary. They acted, in the first instance, just as special commissioners. They saw both sides, and tried to ascertain from headquarters what were the exact points in dispute. When a special correspondent is sent by a paper which is supporting either one side or the other, he writes as a partizan. If by some rare chance he should be impartial or indifferent, his opinion carries very little weight, as he is only one individual. But in the case of the *Daily Paper* Commissioners they were men universally respected by both sides, who, instead of seeking to make capital for their class, only sought to ascertain the exact situation, and, as far as possible, to bring the two sides together. That is to say, they tried to arrive at the irreducible minimum of difference between the disputants, and when the exact point of difference was ascertained, endeavoured to form an opinion on the merits of the case, and to urge that the irreducible minimum should be referred to impartial arbitration. As soon as they had arrived at a report which both could sign, it was published in the columns of the *Daily Paper*. At first there was some disposition to resent this attitude on the part of a mere paper to undertake the work which ought to have been done by the State; but as the Arbitration Bill had never got through Parliament, and it became evident that both the *Daily Paper* Commissioners honestly tried to arrive at the exact truth, which they stated fearlessly and without favour, public opinion rallied to their support. It was felt that until the report of the *Daily Paper* Commissioners had been published the materials for forming an opinion on the merits or demerits of the strike or lock-out had not yet come to hand. If both Commissioners and the secretary, who countersigned the report, agreed in condemning as uncalled for the demand for a reduction or an increase of wages, or any other demand or claim on either side, public opinion so generally pronounced against the condemned side, that both masters and men began to devote more and more attention to getting up their case and laying it before the Commissioners than to preparing for the bitter and crude arbitrament of industrial war. Here also the Fellowship rendered admirable service. Any Fellow who, when a strike was pending, opposed, either by word or act, the decision of the arbitrators, forfeited, *ipso facto*, all rights as a Fellow, nor could he be reinstated within less than a year unless he publicly expressed regret through the columns of the *Daily Paper*.

Of course while in almost all cases it was possible for the arbitrators both of capital and labour to sign a report stating the cause of the dispute, and defining the irreducible minimum of disagreement, it was often impossible for them to agree upon a joint report as to the merits or demerits of the dispute. In that case each signed separate reports, which were published side by side; but both joined in a recommendation that the dispute should be referred to arbitration. The side which rejected this suggestion stood condemned. The whole influence of the *Daily Paper* and the Fellowship, so far as it could influence public opinion, was turned against the side which refused arbitration. By this means a weapon was created which, while it bore some resemblance to the interdict of the mediæval popes, was exercised with all the greater effect from the exceeding moderation of its demands.

The *Daily Paper* also at an early stage in its career drew up what it considered as a normal standard of the conditions of human labour. The first article was a six days' working week; the second, overtime to be paid for after eight hours' work on any day; the third, the Saturday half holiday; the fourth, full recognition of the right of combination on both sides; the fifth, the enforcement of existing laws against sweating, etc.; the sixth, the erection of lavatories, drinking fountains, and bath-houses for both sexes. Of

course there was no compulsory power to enforce the conditions of this labour charter except the impalpable force of public opinion, which found expression whenever a dispute broke out. The first thing the Commissioners had to ascertain was how far the workers had obtained the seven points in the Labour Charter. If they had not, the presumption was strongly on their side whenever they attempted to better their condition. Thus a force was created which indirectly tended to raise the condition of the workmen.

But that which excited the greatest indignation at first, yet soon came to be recognised as a right and proper exercise of the power possessed by the *Daily Paper* and its affiliated Fellowship, was the system of universal reference as to character. The same principle which was carried out by the financial department on the lines of *Stubbs's Mercantile Gazette* was also adopted in relation to employers and employed. Any member of the Fellowship was entitled to a report as to the character of any employé or employer. This was welcomed enthusiastically by employers, especially by mistresses, who found that they could get a much more correct report as to the character of a servant than if they had applied to her last mistress. But there was a fearful outcry when servants commenced to join the Fellowship and began to ask for reports as to the characters of employers. Stingy or ferocious mistresses and vicious masters found themselves under a ban. As the Fellowship grew, and the Labour Bureau accumulated more and more material, it became possessed of thousands of *dossiers* of householders and also of their servants. Each member of the Fellowship was entitled to a confidential report concerning any one of these. There was a fearful howl concerning espionage, but the *Daily Paper* stood firm. "A father," said the editor, "whose daughter was going into service in town for the first time had a right to have all the available information as to the character of the house which was to be his daughter's home when she left his roof." There was no prying or spying into people's affairs, excepting so far as they had performed a contract in the past into which they were endeavouring to induce another person to enter in the future. That person had a right to know all that could be known, and as the Fellowship sought to secure for each Fellow and his children the advantage which each one would wish to have for his own children, they admitted in the long run the wisdom of what to many at first seemed a dangerous line of action. For domestic servants the Labour Bureau drew up a charter which was being constantly brought before the attention of the Fellows, and which tended in the long run sensibly to ameliorate domestic service, thereby going a long way towards making it popular among educated women. Here also there had been no little litigation. The only result of the prosecutions was to bring out very clearly the need of having some pillory in which to expose the names of employers who were unfit to stand *in loco parentis* to their servants.

At Monday's dinner-table the Minister of Labour was present as often as he could spare time from the debates in the House. There were also frequently present the permanent head of the Labour Department, one or more representative Trades Unionists, the president and secretary of the Trades Union Congress, the secretary of the Shipowners' Federation, and any others who were entitled to speak as to the actual facts of labour and capital. As public labour registries had been established by Sir John Gorst as Minister of Labour in 1895, the only service which the *Daily Paper* could render in that direction was by the publication of special Labour Supplements containing, together with advertisements of situations vacant and wanted, a careful condensation of all the latest helpful notions as to the state of the labour market in all parts of the country. The Fellowship Fund, in

co-operation with the Labour Department of the *Daily Paper*, established along various lines of route rest-houses, whereby *bonâ fide* working men tramping from town to town could be provided with cheap and comfortable lodgings, without being compelled to pig together with idle riff-raff in the common lodging-houses, or to undergo the semi-penal treatment of the casual ward.

"Now," said his guide, whose name was Johnstone, to the Professor, "come with me and spend an hour in Hell."

"No thank you," said Glogoul. "You are a little too previous."

His guide smiled. "Don't be alarmed," he said. "The Hell I spoke of is one of the special features of the *Daily Paper* on which Mr. Sterling and Mr. Grant most pride themselves. You can leave it when you please, but it would be absurd not to visit it. Far more even than the Salon, the Restaurant, or the Camera Obscura, it embodies the central idea of the paper."

"Seems to me," said the Professor, "that this paper has got as many central ideas as there are days in the year. And of all the central ideas a Hell centre is the queerest I ever—"

"No, sir," said Mr. Johnstone, "there is only one idea in the *Daily Paper*, one idea in the Civic Church, one idea in every department—from the highest to the lowest—only one idea on which everything pivots, round which everything revolves."

"And that," said the Professor impatiently, "cannot be two and two make four. An arithmetical proposition is not broad enough to be the hub of a whole universe."

"You are right," said his companion. "Our central idea is as broad as the central idea of the Christian religion. In fact, it is but the statement of the practical side of the doctrine of the Incarnation."

"Now you go beyond me," said Glogoul. "Can you not put it in plain English? Your central principle is—"

"Simply this. Put yourself in his place! Look!" he added, pointing to the entrance to a building that stretched westward from the main wing behind the Civic Church. "You see the inscription over the door: 'Put yourself in his place!'"

"And this is Hell," said Glogoul. "If the Sunday-school books I read when a boy were not lying, it seems to me more like the gate of Heaven."

By this time they had passed the doorway; the great iron-barred gate swung heavily on its hinges to let them in, and then clanged to. The Professor, accustomed to bolts and bars and convict life, shrugged his shoulders.

"A prison?" he said.

"No, not in the ordinary sense," said his guide. "But in another sense, yes. A prison established not as a place for punishing criminals, but as a microcosm of the hard and cruel conditions of life in gaol and out, where any one who wishes to understand can be made to feel. On the right we have exact facsimiles of the cells in various prisons and the wards in various workhouses. On the left we have a reproduction of the conditions in which many of our fellow-men have to earn their bread."

"What an ingenious idea!" said Glogoul; "that is Sterling's, I'll be bound. Ever since he did his bit in gaol he has been mad upon the question of the treatment of prisoners."

"Yes," said Johnstone; "the original idea was Sterling's, but it has developed largely under other hands."

"It used to be an idea of his, I remember," said the Professor, "that no magistrate or judge should ever pass sentence of imprisonment until he had spent at least twenty-four hours in solitary confinement."

"The same idea," said Johnstone; "here, for instance, we

have a treadmill. You see these fellows walking up the endless stair? They are young barristers, getting to feel what it is like. Sometimes you find a minister of religion. No journalist on the *Daily Paper* staff is ever allowed to advocate the infliction of any punishment until he has suffered himself at least a sample of it. Everything is exactly the same as in gaol: rations, plank bed, treadmill, and all the rest. Men and women are accommodated here. No one is allowed to stay longer than a week, but there is seldom an empty cell. The place is a kind of retreat; the gaol cells are more popular than the workhouse wards, at least at first. But nowadays, since the ratepayers began to refuse to elect any guardian who has not passed a night in the workhouse, it is astonishing what improvements have been made in the treatment of the indoor poor."

After they had passed the prison cells and the workhouse wards, they came to a place which caused Glogoul to put his handkerchief to his nose.

"Never mind," said his guide, "we shall soon pass through this. We had a good deal of trouble to get the exact smell, but this short corridor is kept constantly filled with the air of a taproom. Persons anxious to serve on licensing boards spend a night in these rooms. Pretty lively, is it not?" said he, and he touched an electric button. Immediately a loud-speaking phonograph filled the air with oaths and curses. Obscene epithets, varied with screams and blasphemy, made the place hideous.

"It is exact," said Johnstone, as he stopped the clamour, "absolutely exact. The vitiated atmosphere is chemically identical with that in an East-end gin-shop, and the sounds you heard just now are simply the reproduction of the hubbub that actually took place last Saturday night opposite the Red Lion. It is wonderful what an educational effect this Chamber of Horrors has upon the licensing question. Any worker on the staff who shows a disposition to regard intemperance lightly is shut up here for a night."

They passed into the lunatic asylum with its strait waistcoats and its padded room. "Whom have we here?" said the Professor.

"Mad doctors for the most part," said his guide. "No doctor is allowed to sign a certificate in lunacy until he has been locked up for a week and treated exactly as a lunatic. Now and then one goes mad under the confinement by the influence of suggestion. But they are much more careful in granting certificates ever afterwards."

By this time they had passed out of the penal or quasi-penal wing, and were entering the wing devoted to an illustration of the way in which the poor live. It was much more horrible than the gaol. The first room was a faithful reproduction of the section of the chemical works where the workers, only able to breathe through respirators, work in poisoned air, and contract painful diseases. The second showed the condition of white lead workers; the third the ravages of phossy jaw in the matchworks; the fourth interested the Professor immensely. It was a facsimile of a fore-castle with sailors' bunks, so hung as to pitch and roll and heave like a ship in a lumpy sea. There were weevily biscuit and salt junk, and any one who wished could realise something of the kind of life lived by our gallant tars. Another room represented a narrow seam in a coal mine. The temperature, the air, the position of the workmen were exactly the same as they are to-day hundreds of feet underground.

"Wherever," said Johnstone, "any representative of the *Daily Paper* comes upon an exceptionally horrible condition of life which some must endure, an exact reproduction of its worst features is set up here, and all who write or speak about it must first actually experience what it means. Now," he continued, "here we have the dwellings of the

poor illustrated. You can live here as an Irish cottier, as a Scotch crofter, or as a dosser in a London slum. We have everything here exact, down to the reek of the peat and the stale tobacco smoke of the crowded doss-house. And those who wish to know what it is to sleep on the Embankment can learn by spending a night on the seat in the balconies which are specially constructed for that very purpose."

"Are they ever occupied?" asked Glogoul.

"Almost always," was the answer. "Students for the ministry and young journalists all pass through these experiences. A fellow-feeling makes one wondrous kind, and they preach and write more sympathetically all their lives because of their sojourn in this microcosmic Inferno of our social state."

"All the same," said the Professor, "I am very glad to get out. What a Chamber of Horrors it is!"

"Yes," said Dick, who came up as they left the gate. "But it is the only living chamber of millions."

The Professor's eye fell on the inscription: "Inasmuch ye have done it unto one of the least of these my brethren, ye have done it unto me."

"You called it Hell," he said. "To me it seems more like Calvary."

CHAPTER VI.

AT THE PRINTING OFFICE.

JUST when Professor Glogoul was thinking of going to bed that night, he received a telephonic message from Sterling asking him if he would like to see the process of producing and distributing the paper. If so, a messenger would be sent to take him at two o'clock in the morning to the office.

"I think I will go," he said. "I wonder what new notions he has got there?"

The editorial office was quite apart from the printing offices. The bulk of the paper was written during the day. Only the summary, the Parliamentary summary and the leading article, together with any special features and the telegrams, were attended to in the editorial office across the water where the paper was produced. Sterling had insisted from the first on having his printing office with a river frontage. He maintained that the river had never been utilised as it might be in facilitating the production and distribution of a paper. He began by putting down his machines on a narrow strip of river frontage at the south side of Waterloo Bridge. The building had grown immensely since then, and now covered a great area, in which a regular dock with gates had been made for the accommodation of the small flotilla of boats employed in bringing paper, coals, ink and oil to the newspaper offices, and in distributing the immense amount of printed matter which was turned out every day.

The Professor snatched three hours of somewhat troubled sleep, got up and dressed, and hurried forth with the messenger. The moment they reached the Embankment the Professor's attention was attracted by the immense arc light which shone in the interior of the clock rising from the centre of the printing office. The arc light was in an immense globe, on which the time of night was indicated by hands which were connected with the Observatory clock at Greenwich. It was a double disc which revolved every half minute, so that the time was visible from all parts.

"What an ingenious arrangement!" said the Professor.

"Yes," said the messenger; "when you get to the observatory tower you will see that a similar arrangement has been erected on each of our branch offices. To the night-birds which fly across London these towers must shine like planets in the dark metropolitan firmament."

THE GREAT SEARCH-LIGHT ON "THE DAILY PAPER" BUILDING WAS STILL STREAMING OVER LONDON.

The Professor looked at his companion, and saw that he was no ordinary person. His face was full of poetic fire. He wondered somewhat at the selection of such a person to show him over the machinery and the distribution of parcels. "May I ask," said he at last, "what function you hold in the journalistic hierarchy?"

"Oh, I am one of their poets," said he. "Not that I am worthy of the name, but I help to write the ballads which, as you will have seen, appear in each number of the *Daily Paper* commemorating some event either of present-day or of ancient heroism. There are several of us, and we also form a committee who sit in judgment on the verses sent in by such Fellows as have a turn for poetry."

"I AM ONE OF THEIR POETS," SAID HE.

"I do not wish to reflect upon your veracity," said the Professor, "but there are too few furrows upon your brow, and your hair is not yet grey. It is a terrible thing to read the manuscript poems of amateur versifiers!"

Mr. Norris laughed. "Oh, you are too hard upon the first chirrupings of the tuneful choir! We who write verses ourselves are more sympathetic than others to whom the effusions of the youthful bards are wearisome to a degree."

"Holloa," said the Professor, "what in the name of fortune is that?"

This exclamation was called forth by a four-wheeled vehicle which was speeding along the street at the rate of ten or twelve miles an hour. A woman sat in the centre with her hands upon the steering-gear. The wheels of the vehicle were of corrugated pneumatic tyres, and the arrangement of the car was something like that of a miniature hay cart.

"Oh," said Mr. Norris, "that is one of our distributing cars. They are driven by a small gas engine. It is a German patent, I believe, but it was not in general use in this country until Sterling took it up. The tyres are rather expensive, but as the traffic is all done in the early morning, and one of the great objects of the *Daily Paper* is to secure noiseless traffic, it was thought better to set an example even before the streets were properly paved, rather than create a noise in the early morning in distributing the paper."

At this moment they arrived at the middle of Waterloo Bridge. The great search-light on the *Daily Paper* building was still streaming over London.

"The last forme is going to press," said Norris. "We had better hurry. But first let us look at the launches coming up."

Gazing down stream, the Professor saw four swift launches making their way to the wharf of the *Daily Paper* office; each carried an illuminated lantern, on one side being the Stars and Stripes and on the other the Union Jack. They were all lighted and propelled by electricity, and very pretty they looked as they silently but rapidly made their way to the moorings at the end of the pier.

"How do you manage at low tide?" said the Professor.

"Come a little further on and I will show you."

When they had crossed to the other side of the bridge they saw several men engaged in an operation which reminded the Professor of what he had seen when a pontoon bridge was being thrown across a river. Caissons filled with air were floated into position while the tide was flowing; across these was fitted a gangway, with a narrow gauge railway. When the pontoons had reached deep water other pontoons were floated to the right and left and made fast, so that even as they were looking a long deep water quay was constructed, to which the launches were secured. The whole operation was gone through in ten minutes.

"Constant practice," said Norris, "enables them to lay down and take in that floating quay in about twenty minutes. It is not necessary when the tide is high, but when the tide falls it obviates what at first was felt to be a great difficulty."

"What do you do with the launches?" asked the Professor.

"They are invaluable for the distribution of papers," replied his companion. "There are four of them—two for the north bank and two for the south. Each has its regular beat. In newspaper distribution time is everything, and these launches enable us to distribute more than half our London circulation. The papers are left at dumping places along the river, from whence they are taken to the branch offices, and then distributed all over London."

"May I ask what is your circulation in London?"

"150,000," said Norris. "I believe, however, that Sterling is contemplating the distribution of a small paper, made up of advertisements and some news taken from the *Daily Paper*, which will be left free at every house in London. The late Cardinal was immensely taken with this idea. Hitherto it has been found impossible, but there is no reason why it should not be accomplished when our distributing agency is perfected. Sterling was discussing it with the Cardinal shortly before his death. His imagination was fired with it. He said, 'You revive a great aspiration which has filled my soul ever since the time when, as a

young student on the heights of Highgate, I looked down upon this great city, and reflected that no means existed adequate to meet the spiritual needs of its million souls. If your scheme is carried out, and to every house in this peopled province the daily messengers are left in the early morning, would it not be a glorious fulfilment of the saying in the Scripture, "The poor have the gospel preached unto them!"

"What circulation would your free paper have?"

"It would take about 500,000 a day to cover the whole city. But it can be done, and I think we shall begin it on New Year's Day."

They had now reached the entrance to the publishing office. "Bless my soul," said the Professor, "if there is not another cookshop here!"

"Yes," said Norris; "so many people are employed here, both men and women, that it was found necessary to establish one of our restaurants for the benefit of the employes. This, however, is absolutely confined to those who are employed on the establishment. There is nothing distinctive about the restaurant itself, although here also, as you will see, we have music and plenty of flowers. The distinctive feature of this place, however, is its bathing accommodation."

They entered a lift and descended to the level of the river. Here, under one of the arches of the bridge, was an immense floating bathing establishment.

"We do not use the river water as yet," said Norris. "In time, when it is sufficiently purified, we hope to do so, but at present it is supplied by the mains." As they entered the bath, Norris said, "You will see that it is divided into two wings—one for the men, and the other for the women. In each there is a spacious swimming bath, and all round are private baths and lavatories, with both hot and cold water. Everything is supplied free. As soon as the Moonlight Soap people heard what we were doing, they asked as a special favour to be allowed to supply the baths with their soap. We replied that we would do so if our analyst could not buy a better soap in the market than what they were prepared to supply us with. They accepted the offer, and so it costs us nothing. You will find that one of their specialities is the *Daily Paper* soap, which they sell all over the world. You see," said Norris, with a practical business faculty which contrasted strangely with his somewhat dreamy features, "when once you determine to have nothing but the best—absolutely the best—every firm feels that your acceptance of their articles is the very best advertisement that they can have. We accept nothing if we can buy anything better. Hence the notification that we accept any article is almost as good as a gold medal at an exhibition. Every employé is not only allowed but encouraged to use these baths as soon as he leaves work. It has proved an immense convenience, and has greatly improved the average health of the establishment. But—come on—the machines are beginning to print the first edition."

Leaving the river, they entered a long building on the ground floor. Two lines of machines stretched to the end of the printing shed. Some were already beginning to revolve, upon others the plates were being fixed. Each machine had one attendant, a lady, dressed in a neat business-like costume with no wide petticoats to catch in the machines. All the attendants had to do was to watch the completed copies being delivered, to remove them from time to time, and to place them on small rolleys which were slowly travelling the length of the room, drawn by an endless band.

"How many machines have you here?" said the Professor.

"Ten machines, each of which prints 5,000 an hour, turning out therefore 50,000 an hour. We start printing at two, and stop when we have reeled off 250,000."

"Two hundred and fifty thousand is not such a large circulation," said the Professor, "when you have a circulation of 150,000 in London alone."

"Oh, but," said Norris, "you forget that similar *Daily Papers* are published in all the large towns of the three kingdoms, with the addition of local advertisements and local news."

"How on earth do you do that?" said the Professor.

"Well," said Norris, "it is not so difficult, as you will see when you go upstairs."

The Professor looked on with admiration at the machines reeling off the white paper, and delivering it at the other end a neatly cut, folded and pasted, illustrated magazine-paper of forty pages. Mr. Norris exchanged a kindly greeting with each of the attendants as he passed.

"They are all educated ladies," he said. "Most of them are daughters of investors who were ruined in the Emancipator and other bogus companies. Lady Sidney was very particular that the whole staff should be drawn as far as possible from the daughters of professional men, following therein the example set long ago by the Prudential Insurance Company. Emancipator victims had the first chance, and any gentlewoman whose savings had been swept away by the fraud or insolvency of building societies. We were enabled in this way," said Norris, "to provide remunerative employment for a great number of ladies, and to open up another profession to educated women. You will find upstairs in the composing-room that the Thorne typesetting machines are worked by two relays of women, each doing eight hours."

By this time all the machines were under way, and the rolleys on the endless band were almost all filled. Each hundred was completed in little more than a minute. They were tied together by an ingenious method, which resembled the way in which sheaves are bound in the harvest-field. Each hundred was taken by the attendant and placed on the rolleys, each of which held five hundred papers. Outside the machine-room the rolleys by their own weight ran down the inclined plane, which terminated in the hold of the launch. The moment they reached the side of the launch they were seized by the women in attendance and stored in the hold. The launch which plied on the north-east side of the river was soon laden, and moved silently off into the stream, after sounding a melodious note full of vibrating melody. Her place was taken by another.

As the electric launch sheered off into the river they could see the attendants making up the papers into lots for delivery. There was no packing necessary. Everything was reckoned by hundreds, with the exception of the odd scores, which were made up from bundles untied and retied in the course of the voyage. When they neared a landing-stage the parcels were deposited at once in a gas-driven quadricycle, which was standing on the gangway awaiting the arrival of the launch. No time was lost, and the quadricycle was speeding on its way to the branch office almost as soon as the launch was free from its moorings.

The two machines at the farther end of the room were not running so rapidly as the others. Instead of delivering papers at five thousand an hour, they were only supplying them at two thousand five hundred an hour. But as they delivered them from the machine they were all folded in stamped and addressed wrappers, which were fed into an annex of the machine, and turned out ready for posting. The wrappers were officially stamped at the Post Office

before printing. By this means there was a postal delivery of five thousand an hour which were hurried off in quadricycles to St. Martin's-le-Grand.

CHAPTER VII.

THE BRIGADE OF WIDOWS.

"You cannot distribute all your papers by water," said the Professor. "How do you manage to supply the inland districts?"

"You had better come up higher," said Norris. They entered a lift, and in a few seconds they stood on the level of the Waterloo Road. Here were drawn up some forty quadricycles in two long rows on either side of the street in charge of two uniformed attendants.

"You see the advantage of the quadricycle," said Norris. "A horse needs a driver to look after it; but these cycles do not run away, hence their drivers are enjoying themselves in the rooms attached to the restaurant. Let us go in and see them."

The Professor found himself in a well-appointed drawing-room, in which a dozen ladies were sitting. Some of them were past middle age, but others were much younger. Some were reading, while others were talking and discussing the latest fashions, and all the other small talk of polite society. Upstairs in the recreation-room there were billiards, bagatelle, and other games. The younger drivers were engaged, with an equal number of the other sex, who had just finished stereotyping and putting the plates on the machines, in amusing themselves with the various games. The men on finishing work had all bathed; there was no smell of oil about them, or any trace of grime. Those present might have been ladies and gentlemen in any West-end place of assembly. Suddenly an electric bell rang twice. Two of the ladies in the recreation-room nodded good-bye to their companions and went downstairs.

"They are the first to load up," said Norris. "We had better follow them."

On reaching the street they found the two ladies standing by their machines, waiting for the arrival of the first parcels from the printing-room below. Each driver knew exactly how many papers she had to take, and as they came up the lift from below in hundreds they were transferred to the cycles, which were soon loaded. Then lighting her gas-engine, the driver took her seat in the midst of the papers and started at a speed which would not have been permitted had the streets been crowded with their usual traffic. The Professor stood watching the process for half an hour. By that time some ten of the quadricycles had been loaded, and had gone off North, South, East, and West. A couple of cycles were kept constantly going to and from the Post.

There was always a great hurry to catch the Northern trains. The South-western circulation was easily supplied by Waterloo and Charing Cross; but sometimes there was a rush to get the parcels to Paddington, Euston, St. Pancras, and King's Cross in time.

"Come this way," said Norris, "and you will see the despatching department, where the parcels are made up for the country. This is not such an undertaking as it was before the great development of the provincial daily papers. Still, there are about 70,000 papers which are made up into parcels to be delivered by rail."

It was a scene of immense animation, resembling that which may be seen at Messrs. Marshall and Sons, or Messrs. W. H. Smith and Son, when the morning papers are being despatched from London. The head of the department was a woman, but most of the assistants were men and boys. As soon as the parcels were made up, they were hurried off to the quadricycles in waiting.

"Now," said Norris, "I propose that we visit the telegraphic operating-room before we take our seat on one of the machines, and witness the work of distribution. In that department you will see how the branch papers are managed."

It was now about four o'clock, and there was only one operator in charge. She said that the whole of the contents of the paper that had not previously been sent in stereo had been telegraphed about midnight.

"Have you a list of our provincial branches?" asked Norris.

"Here it is," said she, handing them a list, from which it appeared that there were *Daily Papers* affiliated with the central office and supplied directly, first by stereo plates and then by telegraphic despatches, in Scotland—Aberdeen, Dundee, Edinburgh and Glasgow; Dublin, Cork, and Belfast, in Ireland. In England the branch offices were:—Newcastle, Darlington, York, Hull, Bradford, Leeds, Sheffield, Preston, Blackpool, Manchester, Liverpool, Crewe, Derby, Nottingham, Leicester, Norwich, Wolverhampton, Birmingham, Bristol, Brighton, Portsmouth, Exeter, and Plymouth.

"Please explain to the Professor how they are worked," said Norris.

"Very simply," said she. "One of us sits at this operating board, and, by an ingenious method recently invented, Thorne typesetting machines in each of the thirty-one centres are set in motion; and as a result, with a couple of Thornes in each branch office, we are able to set most of the paper before midnight."

"But if you make mistakes?" said the Professor.

"Oh, then, they are rectified in the ordinary way at the other end."

"What proportion can you send in stereo, and what must you telegraph?"

"We do not send much by stereo, as a matter of fact. The housewifery page goes, so does the Morning Service page, and the saint's day; also anything relating to the past. But the leading article, the notes, the summary, the City notes, and the story are always telegraphed. Sometimes we send the encyclopædic page by stereo, but it is safer to send it by wire. You see we have private wires of our own to each of these provincial offices, and they all wire us in return anything that is of more than local interest."

"But what about your provincial editor?"

"Every provincial editor is appointed directly from the head office. In his own province, however, he is absolutely free, subject of course to criticism, to reset the whole of the paper with local news and local leaders, and whatever else may be of interest, provided always that he maintains the fundamental features of the parent daily, and that he does not do violence to any of the fundamental truths upon which the paper rests."

"What may those truths be?" asked the Professor.

"First and foremost, that two and two make four," said Norris, laughing. "Secondly, that our chief political duty is to promote the unity of the English-speaking race. Thirdly, that woman has a right to be treated as a human being, and ought to be subject to no disabilities other than those which are imposed upon her by nature, the reduction of which to a minimum is regarded as the great object of legislation."

"Hum!" said the Professor, "I guess you have got a tolerably long row to hoe there!"

"But," continued Norris, "as long as he is sound on those fundamentals, he can pretty well say what he pleases. All the provincial editions are, however, carefully scrutinised every day by a small committee of three, two men and a woman, the woman being in the chair. These censors are

regarded as holding one of the most important posts that there are. They sit in judgment also on the *Daily Paper*. One of the men is always a veteran, and the other a tyro, who, however, has convinced the management that he is thoroughly imbued with the spirit of the *Daily Paper*. The lady chairman is usually middle-aged. As she has the casting vote her position is very important. For the first year or two Lady Sidney occupied the chair herself, but her work increased so rapidly that she delegated it to the present occupant, the Duchess of Oxford, who certainly would have been on the bench if the opening of the judicial functions to women had taken place in the nineteenth century, instead of being reserved to be one of the triumphs of the twentieth.

"Suppose any heresy creeps in?" said the Professor.

"I forgot to tell you," said Norris, "that there are heresies of doctrine and heresies of conduct. The heresies of doctrine are an infringement of the three great principles to which I have alluded. In like manner there are three heresies of conduct. The first is that of being dull, the second is that of being vulgar, and the third is that of being unsympathetic. As long as the editors and the contributors keep within the two trios there will be no difficulty."

"But suppose they do not?"

"Then," said Norris, "the following is the mode of procedure: If the tribunal is unanimous and the fault very grave, a report is immediately laid before the Chief, who at once summons the offender to explain by telegraph. Should the explanation not be satisfactory, he is provisionally suspended and summoned to London to defend himself. Should he be obdurate and be unable to convince the Chief that he is sorry for his mistake, he is at once removed, although, unless the offence has been extremely heinous and the offender insolent in his demeanour, another place will be supplied him where he will not be tempted to air his heresy to the scandal of the Fellowship."

"Always the Fellowship!" said the Professor. "You use the word Fellowship as the Moslems use the Faithful."

"Naturally so," said Norris, "because the Fellows are our Faithful. A fidelity which contributes a penny a day may be scoffed at, but it represents a great deal more in practical life than the fidelity which is only measured by lip professions of devotion to a speculative creed."

"But what is done in the less serious cases?"

"Then the offender is duly warned, and on a repetition of the offence, is summoned to London, where he can plead his cause in person. Should he prove recalcitrant, or, what is more likely, hopelessly stupid, he is removed. But I believe only one editor has been removed from his post."

"What were the heresies which led to his deposition?"

"Oh! he was a good fellow—a Quaker, I believe; but nothing would satisfy him but an almost savage onslaught upon Lady Sidney's great scheme of raising a volunteer corps among women. That, by the way, was a great success. Nothing has done more to improve female physique and to rationalise woman's dress than the formation of a volunteer corps of women. The good effects of the drill, the discipline, and the constant exercise in the open, were quite enough to justify the experiment; and the constant reminder that in case of invasion the women were prepared to do their duty as well as the men, has silenced most of the idle jeering that used often to be heard in the mouths of the vulgar concerning the capacity of women."

"Did they serve as horse, foot, and artillery?" asked the Professor.

"In horse, foot, and artillery," said Norris, "and splendid light dragoons they make. Remember that in war every ounce of additional weight is an additional impediment, and

as women, taken all round, weigh about two stones less than men, a regiment of a thousand horse represents a reduction of weight carried by the horses of no less than thirteen tons. But about the Quaker editor. His offence would have been pardoned had he consented to be silent, but he would not be content unless he denounced the scheme in every paper he issued, and as it was being advocated by Lady Sidney and the Fellowship, it was impossible to pass this by. Now," said Norris, "we shall have to look sharp in order to catch our rapid express quadricycles for St. Pancras and King's Cross."

"But will it not overweight the machines?" asked the Professor.

"No, they are our strongest cycles, and especially built to carry an extra person."

"Look sharp, or they will be off." The Professor sprang into the seat beside the lady driver, and before he knew where he was they were rushing across Waterloo Bridge at a rate that could hardly have been less than ten miles an hour. Close behind him came the other cycle with Norris. They were soon abreast.

"It is not fair on me," said the Professor's companion to the other driver. "You have at least the advantage of two stone. You ought really to give me a fair start."

Crossing the Strand, they raced northward up the great new thoroughfare which the County Council had opened in the previous year, from St. Clement Danes to Holborn. The hand of the driver never left the steering gear; whenever they neared a crossing the warning bell rang melodiously and the pace was slackened.

"We can bring the machines to a dead stop in twenty yards, as you will see if the occasion arises; but we cannot stop in order to try experiments, as we have to catch the northern trains."

On they went again, down Southampton Row, and through the network of streets that lead up to the stations. The Professor's cycle was half a length behind when they came to what was regarded as the winning-post, namely, where they diverged one to King's Cross and the other to St. Pancras. In another moment the Professor was at the Great Northern terminus, where the papers were shipped on board the train. The Professor looked at his watch. From leaving Waterloo Bridge till the parcels were in the van at St. Pancras had taken exactly ten minutes.

"That was very exhilarating," said he to his companion.

"Wait until the other cycle comes, and then we have instructions to run you round some of the distributing centres."

In another minute or two they were joined by the other cycle, and they started on their round.

"I think you will be interested," said Norris to the Professor, "in seeing the way in which the paper is distributed throughout London. As you know, we have twenty branch offices; on an average they have eight thousand copies of the paper to distribute, and it is a point of honour with us that every paper must be delivered at the subscriber's door before eight o'clock in the morning."

"But the people may not be up, and how do they get their pennies?"

"What," said Norris, "did not you know that all our subscriptions are paid in advance, either quarterly, half-yearly, or annually? It was begun in the first instance by Sterling procuring his one hundred thousand subscribers."

"Yes, I remember," said the Professor. "The 'dew on his fleece,' he called it."

"Yes; and he had more dew on his fleece than he reckoned for, and the demand was greater than the machines could supply, and the appearance of the paper was delayed in consequence. He had no intention of distributing it

himself at first, excepting through the ordinary channels of the trade, but as some of the newsagents were hostile, and tried to cripple the new venture, he was compelled to take the distribution of the paper in London into his own hands. In this he was heartily supported by Lady Sidney, who saw in it an opportunity of realising an idea which had weighed upon her mind ever since her own bereavement. She saw what an immense boon it would be if the distribution could be entrusted to a brigade of widows. Oh, by the bye, here is one of them passing."

She was a woman about forty, active and vigorous; and she was going along at a good pace.

"You see that knapsack which she carries on her shoulders, in which to put the papers? She has also a waterproof cover in which to wrap those in her hands."

"Good morning, ma'am!" said the lady driver as she passed the woman. "You are in good time this morning!"

"Thank you!" was the reply. "I have rather a long beat, and it takes me all my time to get through it."

The Professor noted with admiration that though the cycles were running side by side, at the rate of ten miles an hour, there was no sound besides the slight whirr of the corrugations over the pavement; and he could carry on a conversation with Norris as easily as if he had been sitting at his side in a carriage. Presently they drew up beside a large building. It was a branch office. All the women wore very neat bonnets. On each was a pegamoided waterproof ribbon, on which was printed "THE DAILY PAPER." Each woman was numbered, like a policeman, and the divisions were lettered A, B, C.

"Taken a hint from the police?" said the Professor.

"Yes," said Norris; "it was found that the police divisions corresponded much more closely to the distribution of population than any parochial or other systems of dividing the town. The whole work of superintending the organisation was entrusted to an officer who had recently retired from the police force. The letters correspond—that is to say, our widows of the C Division correspond with the C Division of Police. The only difference is that we have only twenty divisions, whereas the Metropolitan Police have more than twenty-four, not including the City, which is additional."

This was the Islington centre, and the first batch of papers had just arrived and the widows were being despatched to the more distant rounds. Each woman had a hundred papers, which she carried in her waterproof knapsack, but when she began to distribute she took a score out and carried them under her arm in the waterproof sheet.

"Rather heavy at first," said Norris, "but it is a constantly diminishing burden, and the knapsack is so arranged as to minimise the weight of the papers."

The women, while waiting for their parcels, sat in the drawing and recreation rooms, which differed little, if at all, from those which the Professor had seen in Waterloo Road. The despatching was done in a large room in the centre, where the widows were loaded up and sent on their several beats.

"How many women," said Glogoul, "have you at each of these stations?"

"From eighty to one hundred," was the reply. "Our widows' brigade is about two thousand strong. Most of the women you see here had lost money in the Emancipator, and this work has been their salvation."

"How long are they employed every day?" asked the Professor.

"Two hours in the morning, when they would otherwise probably have been in bed. They are paid a shilling a day, or six shillings a week, with extras when the quarterly payments are to be collected, or if they have to deliver anything else besides the papers."

"Does that often happen?"

"Oh, constantly," said Norris. "Some of these women think nothing of carrying a weight of groceries in addition to their papers. They are allowed to do as they please in that matter, the only stipulation being that they are not to undertake to distribute anything which will prevent them from delivering all their papers before eight o'clock in the morning."

"It is all very fine this morning," said the Professor, "when the day is beautiful; but what happens when it rains—and it rains very often in London?"

"Quite so," said Norris; "but you will notice that they are dressed so as to provide the minimum of exposure. They are all supplied in rainy weather with a long macintosh, ventilated by Byers's patent, which keeps them as dry as if they had stayed at home. Now, you see how it is that we are thinking of distributing a small daily paper free, made up from the larger one. These women pass every house-door in London. We could easily double the force, and with four thousand active women we could distribute that paper to every dwelling in London before eight o'clock in the morning. It would have a great advantage from a business point of view."

"What other ideas have you got in your eye?" asked the Professor, whose head began to reel with the multiplicity of new schemes which were being crowded into it by his companion.

"Well, there is one great branch of newspaper work which I have not yet shown you. Very soon in the history of the paper it was found that multitudes of people, especially poor people, did not know where to buy in the cheapest market, or where they could get the best goods without risk of adulteration. It was begun in a small way at first, but it has now reached gigantic dimensions. Mr. Sterling began by adding to his staff a thoroughly competent buyer, who had spent twenty years in the buying department of the Civil Service Stores. Then it was announced in the *Daily Paper* that any Fellow who wished to buy anything whatever, could send his order in to the head office, and within twelve hours of the receipt of the order, in the case of ordinary articles, the goods, if more than ten shillings in value, would be delivered at his door. Smaller parcels had to be fetched from the branch offices of the paper. This led to a wonderful development of associated enterprise in each of the districts. Neighbours in a street, or persons connected with a school, would make their weekly purchases in common. Goods were paid for in all cases on delivery, and on all purchases made in this way a commission of two and a half per cent. was charged, which was collected with the price of the articles. The percentage, after paying for the expenses of management, was handed over to the philanthropic department of the Fellowship Fund. Any Fellow could transmit an order on behalf of his neighbours, but in that case the responsibility of payment rested with the Fellow, and not with the neighbours.

"The scheme, which was primarily intended to be philanthropic in its aim, speedily became of immense social importance. Houses of call for the goods ordered constitute an extensive annexe to each of the twenty branch offices. They are carefully divided into compartments, so that there is no mixing of grocery with butcher's meat; nor do tallow candles and kid gloves find themselves in close proximity to one another."

"But how are the orders sent in?"

"Did you not notice as we came along in several of the windows large letters, D. P.?"

"Yes; I wondered what it meant. The C. P. of Carter, Paterson I know, but what does D. P. mean?"

"D. P. means *Daily Paper*. Wherever that is stuck in the window the woman calls for the order. It must be ready for her, and she has instructions never to wait on any account. When she has finished her rounds she usually brings back from ten to twenty orders, which are at once handed into the buyers' department at the office. Some of these orders cannot be attended to in the division. They are then telephoned to the central office, where they are promptly executed. By this means an immense deal of worry is saved the British housewife. In many places the tradesmen have discontinued calling for orders, and the saving is simply enormous."

"But supposing you get an order which, when delivered, cannot be paid for?" asked the Professor.

"In that case," said Norris, "the offence is noted, and the Fellow warned that until he pays for the goods and a fine in addition, he will be suspended from the Fellowship, nor will any future orders be executed for him. In this way you see how the women supplement their earnings. Many a household is only too glad to pay a penny a parcel for goods which are sent to the office of call. At first the Post Office made a bother; but as it was represented that the Fellowship was a club, and these women were its servants, the difficulty was surmounted. But between you and me," said Norris, "I believe it was overcome more by the persuasiveness of Lady Sidney than by the argument which I have just mentioned. But before we leave," added Norris, for the Professor was beginning to yawn portentously, it being now nearly seven o'clock, "you had better breakfast at the restaurant."

Upstairs they went accordingly to an exquisitely decorated room, where they were served in a few minutes with excellent coffee and rolls and fresh boiled eggs.

"You can form some slight idea now," said Norris, "of the immense multifariousness of what we call our side-shows. It is these which constitute the strength of the paper. By itself the paper might have done very well, but it would never have come to be the immense national institution it is to-day. It is this which secures it against competition. Several attempts have been made by imitators, but none of them could vie for a moment with the original concern, and after a few months of more or less precarious existence they disappeared. After we have breakfasted we will just look round the building, for there are many things to show you which I cannot think of now."

"For instance, there is the telephone exchange. Every Fellow has a right to use the newspaper telephone. Here again we had trouble with the Post Office, but we succeeded at last in adding this great convenience to the other appliances of civilisation enjoyed by the Fellowship. Adjoining this room you will find our spacious reading, drawing, and news rooms. When Sterling started the paper he said it was quite impossible for him to put everything into it that people would like to see, and therefore by way of showing that he did not in the least degree wish to compete with the existing papers, he established a free news-room in which any of the Fellows could see all the papers free of charge. You can seldom come in here, especially at dinner-time, without finding a score to a hundred persons reading the papers. There is only one condition insisted upon, and that is, that they must be subscribers to the *Daily Paper* or members of the Fellowship. As a matter of fact, all the Fellows take the *Daily Paper*, but there are many subscribers who cannot afford to belong to the Fellowship. But now I must show you," said Norris, "one branch of our work of which we are really proud."

With that he led the Professor to a side door in the main street over which at night time a bright star shone.

"You see that door," said Norris. "It is never shut

night or day. In the room sits a sympathetic and capable woman. We have three of such women at each of our branch offices, who divide the day into three eight-hour shifts. It is what may be called a clearing-house for all those who are in trouble or distress. Supposing a servant girl who has been out, finds on returning that the door is locked: instead of spending the night in the streets, she comes here and is at once directed to the nearest place where she can obtain a decent lodging. Similarly in cases of accident and sudden sickness our representative can telephone to all the societies which exist in order to attend to such cases. There are societies for the curing of almost every human ill in London, but no one knows exactly where to find them. The head of our clearing-house is able to place her finger at once upon the society or person to whom application should be made in any given case. Of course there are many hopeless applications—that is to say, persons who keep struggling on, trying to keep out of the lunatic asylum, out of gaol, or out of the hospital, whom it is the truest charity to send to their ultimate destination. With these people we can, of course, do nothing, but we can at least see that no person who suffers want, and for whose assistance any society has been founded, is left in the dark without any knowledge as to where that society is to be found."

By this time the Professor was thoroughly tired out, and mounting the quadricycle they rapidly made their way to the hotel, where he slept right round the clock, nor did he wake until he was roused by his wife for dinner.

CHAPTER VIII.

WATERLOO HOUSE: NEW STYLE.

WHEN the Professor rose, although he had slept soundly, he still seemed brain weary. The continual rush of new ideas and fresh developments which had been forced upon his attention in such rapid succession had left a somewhat bewildered impression which did not wear off until he had almost finished his soup.

"Well," said his wife, "if you are awake at last I will tell you where I have been."

The Professor stretched himself, and declared he was all attention.

"Well," said Irene, "I have been at the prettiest and the cunningest show that I have ever seen in all my life. Seeing how tired you were when you came back, I thought I might as well go out by myself and do a little shopping. I started with the intention of going to Regent Street, but I didn't get further than Pall Mall."

"Not many shops so far," said the Professor, "unless they have changed everything."

"They have changed everything, and I forgot all about my shopping."

"Miracles never cease!" said the Professor, somewhat maliciously.

"Never mind," said his wife. "You would have forgotten your criminals if you had seen what I have seen. When I was in Trafalgar Square there was a great crowd clustering round the building where the Union Club used to be."

"Yes," said the Professor, "bucket-shop at one end, Union Club at the other, and a general mix-max of things between. The best site in Europe altogether thrown away."

"You should see it now," said Irene. "At first I thought there was going to be a riot, there were so many people. But I did not see any flags, and instead of marching on the Square they seemed to be slowly circulating in front of the building. My anxiety was allayed and my curiosity excited. So I went to see what was the matter. What do you think it was?"

"Well," said the Professor, "I don't know; but I should not be surprised, after all that I have seen, if it was one of Sterling's side-shows."

"You have just hit it," said Irene. "But what a side-show! I happened to strike the corner where they were showing bonnets. And, oh, Glogoul, you never saw such a love of a bonnet as they had there! I was looking for the entrance to the shop, but to my surprise I could not see any entrance. This struck me as very curious; but I was so much in love with the bonnet, that I stood and admired it for some time. There were several in the window, one prettier than the other; but the one which I want you to get me, Glogoul—for I felt quite a dowdy looking in at that window—was simply a fascinating dream. I was looking at the bonnet with very covetous eyes, and wishing that I could find some one to tell me what its price was, when I noticed a lady, who was apparently as much interested in bonnets as myself. I asked her how I could get into the shop, as there seemed to be no door. She looked at me in surprise, and said, 'But this is not a shop!'"

"What," said I, "is this not a shop front?"

"Oh, no," she replied; "this is the *Daily Paper* Gallery."

"What! One of the *Daily Paper* exhibitions?"

"Oh, yes. Very soon after the paper was started the editor decided to open in the centre of London a free exhibition of the best of everything. The representatives of the *Daily Paper* in all parts of the world have instructions to report immediately upon any article displayed, either in a shop or an exhibition, which attracts enough people to obstruct the traffic. Whatever that article is, no matter how much it may cost, or how far distant it may be, it is at once procured and sent to London, where it is put on show in one of these windows. There is a constant succession of novelties, but only some of them are selected in this way. The bonnets there are those which have been selected by the Fashion Department of the paper, as being the best designs produced either in Europe or America. Sketches of them, and full information as to price and manner of making, are published in the article on Dress in the *Daily Paper*; but these are the originals."

"I asked her if she could give me any idea as to what would be the price of a bonnet."

"Oh," she said, "you will find the exact cost, and a list of the materials that go to make it up, in the same article, which appears in Friday's paper. But if you have never seen the show, you had better walk round with me."

"Nothing loth, I accepted her guidance, and very soon we were chatting together as if we had been old friends. All the windows were dressed with wonderful taste. I almost forgot the bonnet, which you must buy me, when I came to see the tea-gowns. They were an inspiration, and then in violent contrast to these wonderful costumes we came upon the Chamber of Horrors. This was a window in which all the monstrosities of bad taste in the current fashion were displayed in such a way as to bring out their faults most conspicuously. After looking at them for a moment, you simply had to go back to the other window in order to regain your self-respect. Any one who wants to have—and you, my dear Glogoul, are sadly in need of it—an æsthetic training in this respect, had better go and stand before those two windows. They are side by side—an object-lesson to all the world!"

"Well," said the Professor, who was eating his dinner while Irene talked, "Irene, you can't live on the memory of dresses. Take some fish."

"But it was not only women's dresses," said Irene, "there were costumes for men; but I did not pay so much attention to them, although some were really remarkable, and

made me think that men might actually be made pleasant to look at. I mean their clothes, of course," she said, laughing. "But the windows devoted to dress only formed one side of the great triangle, although it was the side which I liked best. There were greater crowds at the other windows. I can't tell you half what was there, for there was such a multitude of objects of interest. One window, I remember, was devoted to the latest invention in the way of bicycles. It was worked by gasolene, and was in movement, being so suspended that the wheels could move round, and one could see the working of the engine. It was a very ingenious contrivance, and there was a great crowd round the window. My friend told me that any new invention that comes out, and is of any general interest to the public, is exhibited in one of the windows. It is a maxim of the *Daily Paper* that if a thing is good enough to be described in its pages, that thing ought to be put on free show in the heart of London. The whole show is changed every week. In the next window there was a magnificent map of Africa, dotted with little flags, showing the exact course of the latest expeditionary column which is on its way to repair the telegraph wire Cecil Rhodes has carried from Cairo to Cape Town. The line of the telegraph was also clearly shown, as well as the exact point at which the Arab slave traders had cut the wire. Grouped round the map were portraits of Cecil Rhodes and the commanders of the expeditionary column, which seemed to be on the point of reaching the broken wire. The map was not so popular, however, as the next window, in which was portrayed in model the whole of the Arctic regions. It was a wonderful model, and I have seen nothing which gave me so good an idea of the ice cap which covers the northern extremity of our globe. Everything was modelled exactly to scale, and in the centre was an exquisite little model of the *Framm*, Dr. Nansen's stout little ship, as recorded by the last despatch, which only arrived the day before yesterday."

"Oh," said Glogoul, "I know! Nansen was just leaving for the Arctic regions when I was in Chicago. I have often wondered what has happened to him."

"Well," said Irene, "he seemed to have got past the North Pole and then to have stuck, judging from the wonderfully graphic model. The line of route of the ship was shown, and there it was some degrees on the other side of the Pole. Oh," said Irene shuddering, "the very look of it made me feel that I was being frozen to death."

"Well," said Glogoul, "what with bonnet shows, and models, and machinery in motion, I don't see how Sterling finds time to edit the paper."

"A great crowd was assembled in Pall Mall," continued Irene.

"Oh, yes, where the bucket-shop used to stand," interrupted the Professor.

"Yes," said Irene, "there was a special force of police to keep the people moving. There was a great plate-glass window with an iron barrier before it to keep the people back. Behind it was a wax representation of Prince Bismarck lying in state at his country-house in Germany. I remember seeing some waxworks like it in a museum in Paris. It was wonderful. You actually seemed to see the bier and its burden."

"Really," said the Professor, "I must go out and see it; but I suppose it is not on show at night-time?"

"Is it not! The whole place is illuminated with electric light. They say it is better than in the daytime—the effect is finer."

"This idea of waxworks was a favourite notion of Sterling's," said the Professor. "I remember him even declaring that one of the great virtues of the Catholic Church was that it practically established a Madame

Tussaud's in every parish church. But what a staff the man must have!"

"Mrs. Body—I had to ask her name—," said Irene, "told me that every week they have a new waxwork group, and that any scene occurring anywhere in the world which merits a lengthy notice in the *Daily Paper* is reproduced in waxwork as like the original as possible. But it was not only the waxwork of the dead Bismarck which attracted attention. On either side of the mortuary group was a collection of relics and trophies of him, his autographs, his weapons, his papers; in fact, the whole of the front of the building was a Bismarck museum. But what a crowd! I was thankful to get out of it. On the Pall Mall side the windows were very attractive. In one was the picture which had been exhibited in Lady Sidney's drawing-room the previous week. It had a window to itself. The next window was devoted to photographs. All the newest photographs were displayed there, and no photograph was allowed to remain longer than a week. But the window which caused the greatest excitement and collected the largest group after the waxwork window, of course, was the children's window. The whole world is ransacked for new toys—especially mechanical toys—for that window, and they were all in motion. What crowds of little folks there were! It was well worth coming up to London to see them. What with walking dolls, automatic toys, and all kinds of steam-engines and electric contrivances, you never saw such a show.

"Another window," continued Irene, "was devoted to the saint of the day. This group was changed every day. Sometimes there was a bust or a portrait of the saint in question, and as many relics as could be got together. Next to the saint there was a wonderful representation of the Battle of Naseby, the great historical event selected for commemoration this week. There were the two armies drawn up on the opposite ridges of Naseby uplands. There were the squares of the pikemen with the cavalry on the wings. There were Cromwell's Ironsides and Rupert's adventurers, just shown in the positions they occupied before the action commenced. This will be on view for the whole of the week. Its place will be taken by a view of the Battle of Waterloo next week, so Mrs. Body told me. No wonder, I thought, that there should be such crowds. It must be the most popular show in London."

"I wonder what he does with all these things when the week is out?" said the Professor.

"I asked that," said Irene, "and I am told that they make the tour of the provinces. You see that in every large town where they have their branch paper they try to reproduce this show, on a smaller scale of course. They at the same time send up to the London show inventions and artistic productions. When the waxworks have made the tour they are either melted down, or, if they are of permanent interest, they are distributed among the various branch offices and reading-rooms of the *Daily Paper*."

"Well," said the Professor, "it strikes me that Sterling has got his hands full. At the same time I should not wonder but that big free exhibition pays its expenses as a mere advertisement, and of course he could let the upstairs storeys."

"No," said Irene, "because I went upstairs. Mrs. Body took me up. She said she was a Fellow, and Fellows could introduce their friends. Upstairs was quite wonderful. There are reading-rooms, and smoking-rooms, and conversation-rooms, playing-rooms, news-rooms and tea-rooms—in fact you never saw a more sumptuously furnished social club. Everything was free, she told me, for Fellows and Fellows' friends. Of course they paid for any light refreshments that they needed, but otherwise the books and papers, etc., were free."

"Well," said the Professor, "the sooner we become Fellows the better, I think. They seem to have the best of everything in this city, at any rate, and it only costs a penny a day."

As they rose from dinner the waiter asked the Professor if he would see Mr. Richard Grant, who was waiting for him in the vestibule.

"Certainly," said the Professor, and in a few minutes Dick and the Professor were deep in conversation in the smoking-room. Dick had given up his tutorship in order to serve Sterling as his private secretary as soon as the paper started. Then he had been promoted to be secretary of the Labour Bureau, and he now called on the Professor to ask him whether or not he would be prepared to accept the post of Social Coroner, about to be created by the Civic Church department of the *Daily Paper*.

"You see," said Dick, "the chief has a great opinion of your talent for investigating obscure social phenomena; and he has just prevailed upon the Prisons Committee of the Civic Church to create the post of Social Coroner."

"Which is, being interpreted," said the Professor, "the modern version of the Grand Inquisitor, I presume."

"With the exception," said Dick, "that the coroner is not Grand, and holds inquests instead of running the Inquisition."

"Pretty much the same thing," said the Professor; "but I gladly accept the post. It has always seemed to me to be absurd that there should not be an inquest on every person who becomes chargeable to the public, whether in the workhouse or the prison. From the self-supporting point of view a man becomes dead when he comes on the rates, and as it is an unnatural death, therefore there should be an inquest."

"That is exactly what is wanted," said Dick. "You have to begin with the prisons, and we are looking forward to great improvement in the treatment of prisoners when we have a study from the point of view of sociology and physiology as to the causes which contribute to the criminal type. I ought not to have come," added Dick, "but as the official who should have brought you the notification is a friend of mine, and heard that I was coming to the hotel, he asked me to call on you. Besides," said Dick, "I am rather at a loose end just now. My successor has been appointed to the Labour Bureau, and I have not yet been gazetted to my new post on the paper."

"What is that?" asked the Professor with some curiosity.

"Oh," said Dick, "I had private reasons of my own for wishing to remain at headquarters,"—the keen eyes of the Professor noticed that, as he spoke, Dick looked somewhat shamefaced, but he did not guess that Dick was finding it difficult to associate with Nedelca and to maintain an ordinary friendly intercourse with her—"so I was very glad when I heard to-day that I am to be assistant editor," Dick continued. "You will keep the appointment to-morrow? The staff of the Goodwill section of the Civic Church will be ready to receive you at eleven, when you will get your formal appointment."

When Dick left, the Professor rejoined his wife in the drawing-room and proposed to take a stroll through the streets. He had just got up, he said, and did not mean to go to bed for some time to come. Irene consented, and they went out together.

"How wonderfully that revolving light radiates the sky!" said Irene, as they saw the great beam sail majestically round the four points of the compass.

"And not the sky only," said Glogoul, for at that moment the light was depressed, and the bright white light fell across Trafalgar Square and rested there as the silvery moonbeams lie upon the tranquil lake. For a moment it stopped, then travelled slowly across the square.

"Wonderful effect, that," said the Professor, "but it was rather dazzling. How dark the place seems now that it is gone! I can imagine from the moral and police point of view it is of incalculable advantage to have this great central bull's-eye turned on all the shady places without warning or intimation that it is coming."

Passing the end of the National Gallery, they made their way towards Seven Dials. As they approached it they heard to their surprise a band of music playing, and as they came nearer, Irene exclaimed, "What beautiful music! Surely this is not a street band?"

"It is a band in the street, at any rate," said the Professor. "But, 'pon my word, here is the *Daily Paper* at it again."

Some buildings condemned by the surveyor had been demolished, and on their site this *al fresco* concert was being held. On reaching it, they found that the concert was only one feature of the entertainment. The vacant place had been carefully levelled and laid out as a temporary open space or playground, with a few flower-beds, a drinking-fountain, and plenty of seats. The wall adjoining this space had been whitewashed, and on this wall were thrown a series of pictures by a first-class magic lantern. The pictures told their own story. There was no attempt at public speech; the only interpreter was the music.

When the "*Marseillaise*" was being played there was a whole series of pictures from the French Revolution. Half a dozen slides illustrating the great English naval battles were shown when "*Rule Britannia*" was played. Sometimes, but not often, there was no connection between the music and the pictures. Even while they were standing the band played "*Auld Lang Syne*," and the crowd, which was very considerable, dispersed to their various homes. The Professor got into conversation with the lanternist.

"Do you come out every night?" he asked.

"Certainly," said he, "whenever it does not rain cats and dogs. It is wonderful what audiences we get with the lantern. To-night is nothing. These are only a stock set of slides; but at certain stands we have the whole history of the week portrayed by means of lantern slides. Then we have explanations. It is only in open spaces where this can be done; but it is done wherever it is possible. The idea of the Civic Church is, that wherever there are dirt and squalor, misery and ugliness, the lantern can be made a messenger of life and beauty and romance. It is a veritable people's gallery, and is immensely appreciated. It became a fashionable and interesting occupation for amateur painters and photographers to prepare lantern slides for these street exhibitions. There are about a quarter of a million of slides, I should say, being shown in the streets of London constantly."

The Professor and his wife on their way back to the hotel walked down Pall Mall, and found, as Irene had said, that the great windows of the triangle were blazing with electric light. Pall Mall East and Cockspur Street were evidently a favourite promenade. In one of the upper windows above the waxwork of Bismarck there were displayed huge transparency pictures illustrating the events of the day, and the pictures which were to appear in the *Daily Paper* the next day, together with an immense number of instantaneous photographs illustrating the day's events.

"I am astonished," said the Professor, "that the disreputable element seems so absent from the crowd! I should have thought that a place like this would have attracted all the *demi-monde* of the city!"

His remark was overheard by a man who was standing near, who said, "Do you see those ladies with a white badge round their arm?"

AN *AL FRESCO* CONCERT WAS
BEING HELD.

"Yes," said the Professor. "I have noticed them more than once."

"That is the explanation of the mystery," said the Professor. "These women volunteer to serve their sisters. They act as a kind of rescue-agent; and if she sees one of her own sex who is on the prowl, she approaches her to induce her to lead a different life."

"What is the result?" asked the Professor.

"Some, especially the younger ones, are saved. They take very good care to give the beats of the watch a very wide berth."

"I suppose," said the Professor, "these ladies are under the control of the police?"

"Oh, dear me, no, nothing of the kind. They are the most efficient check upon the abuse of power on the part of the police. They are run by the *Daily Paper*."

"Well," said the Professor as they walked on, "after this I shall not be astonished if any one tells me that the sun, moon, and planets are all run by the *Paper*. If they are not, they seem to be about the only things which the paper has not taken under its charge."

CHAPTER IX.

"VATICAN, LONDON."

THE Emancipator building had two wings, two buildings which united the main edifice with the side buildings. That on the left on coming down from the top was devoted to the popular restaurant, of which we have spoken; the other, which the Professor noticed first, was entirely devoted to the departments of the Church. This building was divided into two sections. Over the door of one was inscribed, "Peace on earth and goodwill to men"; the entrance of the other section, "Goodwill to men and peace on earth." The two divisions into multifarious activities of the Civic Church were

Along the whole front of the building there ran the inscription, "This building is dedicated to the union of all who love in the service of all who suffer." Everywhere there was activity; messengers were coming and going, hansoms were continually driving up, and the whole place was alive with the murmurous music which is heard at the mouth of a beehive when the sun shines brightly and the bees are returning with their spoils. The Professor was rather early, so he seated himself in the centre of the quadrangle beside a fountain buried in moss and flowers.

"It's like a new Vatican," he said, "and as spry as the other is sleepy. Rome no doubt seems spry to the Oriental, but as Rome is to Tibet, so is London to Rome. What a whirl!" said he, as he watched the human tide, and heard from almost every window the sharp click, click of the telegraph instrument or the sharp whirr of the telephone call. A great flock of white doves which had been sitting on the roof of the Emancipator building now took flight, and after a circle in the air, alighted almost at the Professor's feet.

"Pretty things," he said, "and how Irene would have loved them if she had been here! How tame they are!" as one of the doves ventured under the seat in order to pick up the crumbs lying there. "What a picture of white

winged peace in the midst of the rush and the roar of this whirl of life!"

Just then the carillon of the clock tower in the centre of the Civic Church building rang out the notes of the familiar Doxology, and the clock struck eleven. The Professor entered the doorway under the inscription of "Goodwill to Men," and found himself in the second division of the Civic Church. He was at once conducted to a commodious committee-room, where were assembled about a score of men and women, each seated before a comfortable writing-desk. Immediately before the chairman's eyes was the inscription, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

The Professor, being introduced, was addressed by the representative of the Prisons Department, who welcomed him to the service of the Civic Church, and then explained to the Professor the nature of his work and the good results they hoped would follow the establishment of the Social Inquest. The ceremony was soon over. At its close, the chief of the Prisons Department asked the Professor to accompany him to his office. Glogoul consented. Always thirsty for information, he saw a much better chance of obtaining what he wanted in a *tête-à-tête* than in the midst of a score of persons. No sooner did he find himself with his companion than he overwhelmed him with questions.

At the close of half-an-hour the Professor had a much better idea of the Civic Church and its work than he had before he came into the building. The Civic Church was the somewhat fantastic title which was given to the attempt to bring something like order into the anarchic chaos of philanthropic endeavour. The primary object was to revive Civic religion in the minds of men, and secondly to promote the union of all who loved for the service of all who suffered, and its special object was the establishment of a Federal Centre round which the secular activities of the Churches could be grouped. The organisation was very simple. All the work was divided into two parts—one which tended to promote peace on earth, and the other which promoted goodwill to men. Each of these departments was again subdivided into six other departments.

Under the head of Peace the first concerned itself with the promotion of the reunion of the British Empire and the American Republic; the second sought to establish a Federal Tribunal, whose decisions should be considered as decisive by all the kingdoms, republics, and colonies that speak the English tongue; the third was devoted to the promotion of the unity of Europe. The other three divisions were more domestic than international in their scope. The first, which was very closely connected with the Labour Bureau, endeavoured to introduce peace in the case of industrial disputes. The second dealt with the more delicate affairs relating to divorce, and all questions concerning disputes between the sexes. No divorce case was allowed to be heard in court until there was a written report from this department saying that every effort which had been made to bring the parties together on the basis of mutual forgiveness had failed. The last section was an adaptation of the Scandinavian practice, whereby all persons thinking of going to law are provided with the alternative in the shape of an arbitrator, who, without fee or reward, would endeavour to act as peacemaker...

HUGE TRANSPARENCY PICTURES WERE DISPLAYED.

In the second department, the division was based upon the six great secular acts of mercy which were mentioned by our Lord in His Sermon on the Mount, and the description of the last Day of Judgment. The first department, hunger, dealt with the question of charitable relief, the unemployed, the Poor Law administration, and anything which concerns the lack of food; the second, thirst, was equally comprehensive. The whole of the temperance question came under this head, and one of its chief functions was the establishment of free drinking fountains and good coffee-houses, wherever there was a dense population. The third division dealt with the clothing of the naked, and it had done its work so thoroughly that the appearance of a ragged or bare-footed child in the streets would have been the pretext, if not for an indignation meeting, at least for many angry letters to the papers. The department dealing with hospitality to strangers dealt with the whole question of human intercourse.

Among its sub-divisions was a matrimonial agency, as well as popular drawing-rooms, etc. The sixth division—sickness—dealt with everything relating to hygiene, the hospitals, and all the methods of combating disease. The Department of Prisons dealt not only with reformatories, gaols, and convict establishments, but with all those departments of human life in which men become helpless prisoners of circumstances, the slaves of tyrannous habits, or who have in any way ceased to be free agents.

Everywhere and on all sides there was the assertion that liberty was good in itself. "Where the spirit of God is, there is liberty," was one of the favourite mottoes of the building. Each department was managed by three members. The first was concerned more particularly with the past. He was the historian and the encyclopædist, to whom reference was made whenever information was wanted as to what had been devised by human wit and human experience in the past, dealing with the subject which came up for consideration. The second member dealt more immediately with the present. He was the responsible administrator, and his companions were more for consultation than for decision. The third member had as his special province the consideration of the future bearings of the question. He was a man of imagination and of logical mind. These three formed

the junta, and the eighteen were the staff of the Goodwill department of the Civic Church. Their aim was to act as the Intelligence Department. They arrogated no authority to themselves, no right to dictate to any human soul, but they constantly endeavoured to unite those who were working in the cause of humanity. They formed themselves into a centre for the distribution of all the best information, and their counsels were ever ready for those who sought them. They began their operations by a vast sociological census of the whole community. In the central hall of the Goodwill Department there was carefully

preserved an immense map of London, which had been drawn up after a house to house visitation, conducted by volunteers from all the Churches and from none. It was possible for any one to see, with this map before them, what any given district lacked of the necessities of civilisation. All the black spots were duly marked, and all the institutions which existed for the furtherance of the higher life. Copies of this sociological survey, or rather copies of sections of the map, were sent to every minister of religion in London. A great conference immediately followed, when for the first time since the Reformation a combined effort was made against the forces of evil by all the forces which make for righteousness.

What was done in London was done in every town throughout the country. The bull's-eye of the electric searchlight was turned on all the seamy places of civilisation. The Churches, and not the Churches only, knew exactly where they stood for the first time, and what kind of life it was which many thousands of our people were living. This was illustrative of the whole

operations of the Department. It collected information and distributed it, and acted as organising centre and an energising nucleus for promoting federative action. That was one of the great objects of the Civic Church. The second object, hardly less important, was the utilisation of the wasted luxuries of the few for the benefit of the many—to secure for the have-nots the superfluities of the haves. Without any dictatorial interference, and without any cry for confiscation, there gradually grew up a feeling that it was shameful to have any thing, whether houses or grounds, or horses or carriages, or any thing that you could share without impoverishing yourself, if they were

"PRETTY THINGS," HE SAID. "HOW TAME THEY ARE!"

not devoted for some of their time to those who were denied them.

In this the *Daily Paper* set an example. As soon as the quadricycles and the launches had distributed the paper, they were placed at the disposal of the sick, the invalids, the cripples, the halt, the lame, and the blind. If at dinner-time the launch was lying idle at the wharf, it was speedily filled with a crowd of little ones from the narrow streets of southern London, who, to their great delight, were taken for half an hour or three-quarters down the stream, and were then brought back again safe and sound. It was the same with the quadricycles and all the vehicles owned by the paper. "No doubt," Sterling used to say, "they wear out sooner by all this constant use, but better wear out than rust out, and it is impossible to exaggerate the amount of pleasure and health the free use of these vehicles afford the poor of London." Parish doctors whose patients were being nursed back into life, and who needed an outing, simply reported the need to the Civic Church, and the need being known, either a quadricycle or a carriage would call the next day and take the patient out. Under the pressure of public opinion, formed by the sight of such an example and by the constant inculcation of the doctrine of the stewardship of wealth, no rich man in London dreamed of sending out his horses for exercise until he had ascertained whether there was any person in his neighbourhood who needed a drive. In like manner there was no garden, lawn tennis ground, private cricket ground, or, above all, private ground, furnished with trees and flowers, which was not registered; and their owners were from time to time urged to spare of their superfluity in order to minister to their less favoured neighbours. Under the auspices of the Fellowship, the Zoological Gardens were bought up, and made as free to the poorest in London as the Jardin des Plantes is to the poor of Paris.

"Come," said the chairman of the Prisons section, "I must introduce you to the most important man in the whole Civic Church."

"Really!" said the Professor; "who is that?"

"It is Benjamin Waugh. He is only a little fellow to look at, but he has too big a task in hand to be included in any one of these sections. He has a special post for himself. He has been created Universal Guardian of all the English-speaking children throughout the world. Many thought he ought to have been appointed by the State, but after due consideration with the Prime Minister and the Home Secretary and the Lord Chancellor, it was decided that he would be more useful and more likely to secure the welfare of the children if he were appointed to this post under the Civic Church. He is a kind of universal father of all the distressed and forlorn children in the world. He is the embodiment of the spirit which found utterance in the words:—"Suffer little children to come unto me, for of such is the kingdom of Heaven."

As the Professor turned to go he heard a light step on the stairs, and was delighted to see the bright face of Nedelca.

"Oh, I heard that you were here, and I hurried over to thank you for having joined the staff, and to ask you to come and dine with mother and me. There is so much that we must talk about."

"Charmed," said the Professor. "And where shall we go?"

"Oh, to the restaurant across the way. Mother is waiting for us there."

Piloted by Nedelca, the Professor made his way to the American dining-room, where he found Lady Sidney waiting for him.

"I suppose you are one of us, Professor, at last. We have been waiting for this for years, but you had vanished so completely out of sight that we could not tell where to find you."

"Yes," said Nedelca, "when the paper came into being, and Mr. Sterling was fixing up his staff, the first person I told him he ought to engage was yourself. He said, 'Agreed,' but he would thank me to find you."

"Well," said the Professor, "I thought I had come upon the clue of the missing link between the monkey and the man. Ancient traditions, as well as many travellers' tales, pointed to a certain inaccessible spot in the centre of barbarism as the place where a race lived which was half man and half monkey."

"Did you succeed?" asked Nedelca curiously.

"Well, no," said the Professor. "I have met many men who are worse than monkeys, and some monkeys that are as wise as some men; but as a man of science, I cannot tell you that I have ever found a monkey intelligent enough to lie. Until a monkey can lie, he has not yet crossed the barrier which separates him from man."

"What a cynic you are!" said Nedelca merrily. "Have they initiated you into all the mysteries of the Civic Church?" added she.

"Now, Miss Nedelca," said the Professor, "you invited me to lunch. Ever since I came to this country I have hardly had time to eat; the whole of my attention has been taken up with the absorption of facts about your doings in this paper. I have heard more things about the Civic Church this morning than I can digest in a week, or work out in a lifetime. I refuse to discuss the Civic Church any more."

"Well," said Nedelca, "have you heard about the pilgrimages?"

"I have heard of Lady Sidney's pilgrimages round London, and I propose to become a pilgrim with my wife on the first opportunity."

"No, I mean the big pilgrimages. But have you seen Dr. Lunn?" said Nedelca.

"Do you mean Bishop Lunn of the Methodist Episcopalian Church?"

"Yes," said Lady Sidney, "they made him bishop the other day, but he is always Dr. Lunn to us. He has charge of the pilgrimages of the Civic Church, and it is wonderful the development which this branch of the work has taken. He began quite in a small way by taking parties to Grindelwald, and holding reunion conferences at Grindelwald and Lucerne. In these experimental enterprises he showed a fertility of ideas, and a certain largeness of view, which marked him out for the post which he now holds to-day. The business, indeed, has grown to such a large extent that it is quite impossible to find room for him and his staff in the Civic Church wing or in the central building."

"Do all your pilgrims go in four-in-hands?" asked the Professor.

"By no means," said Lady Sidney. "We use all means of locomotion. In this country, where the distances are not great, the most popular pilgrimages are those conducted on foot."

"On foot?" said the Professor.

"Yes," said Nedelca, "and very jolly they are too, I can assure you. There are many pilgrim routes. There is the road to Canterbury for one, to Portsmouth for another, to Oxford and Stratford for a third, to Cambridge, through the Eastern counties, and so on. On all these routes you will find, from the first bright sunny days of June till the end of September, parties of pilgrims making their way on foot."

"They are all accompanied by guides," said Lady Sidney,—"our new Order of Pilgrim Friars, volunteers for the most

part, young men, young ladies of family, and university students, who are delighted in this way to mix with the people. The pilgrims, like the guides, are of both sexes."

"The walking no doubt saves a great deal of the expense," said the Professor, "but I always thought the chief item in a pilgrim's bill was the hotel account."

"Oh," said Lady Sidney, "we have revived the excellent custom of the mediæval monasteries, and all along the pilgrim routes at convenient intervals the Fellowship—by the aid of special endowments by richer members who are interested in reviving the traditions of the past—have put up wayside hostels. They in no way compete with the ordinary public-house or hotel, because they are strictly confined to the pilgrim bands travelling with guides. They are, however, sufficiently numerous to provide free lodging; and the cost of board is reduced to a minimum, each pilgrim buying what he pleases at the refectory, where all necessary provisions are provided. These hostels are reserved for foot-pilgrims. There are other hostels for cyclists, and it is no uncommon thing on a Bank Holiday to see a dozen parties of two hundred and fifty cyclists starting in different directions, each accompanied by two of our pilgrim friars, who remain with them until the Monday night. There are also pilgrimages by train. In fact, we claim that we have enormously increased the earning power of the railway companies. There is not a place of interest which has not its special pilgrimage; and on great historical anniversaries there is quite a fête on the spot where the event occurred. The pilgrimage idea has also been thoroughly taken up by the Education Department, and there is no reward more diligently worked for by the scholars in our elementary schools than the prospect of being allowed to join, as free pilgrims, some of the tours. The scholars are also taught to rehearse the battles, and I can assure you that there is no prettier sight than, on the uplands of Naseby, to see the whole battle gone through just as it happened, with the exception, of course, of the bloodshed."

"You see," said Nedelca, "the principle we go on is that the people should be made to see as far as possible exactly how the notable events before their day happened. If we cannot do it in one way, we show it in another, either by the magic lantern, pilgrimages, or theatrical performances."

"So it seems," said the Professor, "that I shall be quite an *ignoramus* compared with one of your schoolboys."

"Then we have," said Lady Sidney, "our great continental pilgrimages under the direction of Dr. Lunn. We have not been able to carry out our system of hostels to the same extent on the Continent; but it is growing, and we have sufficient hostels established to enable a working man and his wife to start from Dover, go up the Rhine, through the Black Forest to Switzerland, and return home again, without incurring more expense than if they had remained at home. This work is specially favoured by the peace section of the Civic Church, where it is believed that the more people learn to know each other as individuals the less likely are aggregates of individuals to go to war with one another. Each country has its own special staff, and each is regarded as a special study in the curriculum of our new university."

"What university is that?" asked the Professor, half anticipating the reply.

"Oh, the *Daily Paper University*," said Nedelca, laughing. "Mother forgets that you don't understand the extent to which the New Journalism has invented a new vocabulary."

"I remember the 'New Journalism,'" said the Professor quickly, with a shudder—"what was called the New Journalism, at least, when I was in Chicago. It was a vulgar, pretentious, Paul Pry of a thing, which, in addition

to all the old vices, added some fresh ones of its own, and then labelled the lot the New Journalism!"

"Yes!" said Lady Sidney; "but our idea of journalism is very different. It tries to revive all that was ~~non~~ useful in the Mediæval Church."

"Sterling has founded a paper," said Glogoul, "but what he is really driving at is to re-create the Church!"

"Hush!" said Nedelca, putting her finger to her lip. "Don't breathe a word about church; it is still a red rag even to many of those who are helping us most; and, as for the regular churchmen, they simply foam at the mouth at the bare idea of the Civic Church. You do not know what trouble we have had about it; but by laying great stress upon the word Civic, we have managed to keep the name. But the less said about a church the better."

"Yes," said Lady Sidney, "those who hate all churches, and those who believe them to be the only way of salvation, join in denouncing any attempt to describe our great humanitarian movement as in any sense partaking of the nature of a church. But what you say as to Sterling is quite true. He is a perfect Autolycus, who goes about the world with his eyes roaming in every direction, seeking if he can gather any notion or hint which may be useful for adaptation in England to-day. He certainly seems to have taken up more notions from the old Catholic Church than from any other institutions which exist in the world."

"But that is quite natural," said the Professor, "for the old Catholic Church was the only institution which set itself to do for the whole of humanity what should be done now, only on a more extensive scale with modern improvements. But what about the foreign pilgrimages which are a branch in your new university curriculum?"

"Yes," said Nedelca, "they are better than any university curriculum, and so you would think if you were to accompany them, I can assure you. All Europe became new to me after I had studied the working of the Church of the Middle Ages at Rome and at Trêves, and after I had made the pilgrimage over the ruins which afford so pathetic a memorial of the dominion of the Moors in Spain."

"The *genius loci*," said her mother, "has a great influence. We have placed the Catholic doctrine of the sacredness of shrines upon a new and scientific foundation."

CHAPTER X.

"THE ROMANCE OF THE WORLD."

NEXT morning the Professor from old habit took up the *Times* at the breakfast table, and read with considerable interest the account of a brilliant and decisive little battle which had taken place between Cecil Rhodes's Telegraphic Restoration Party and the Arab slave traders. The small military expedition had been surprised during the night by an attacking force of the Arabs. At first there had been some confusion, but after a time the English rallied and had inflicted upon their assailants a defeat so severe that the despatch ended with an announcement that no further hostilities need be apprehended. Glancing across the table he saw a Mr. and Mrs. Molton, with whom he had exchanged greetings on a previous occasion. Looking up from his *Times* he said, "Interesting news this from the Nile, is it not?" Then he noticed to his surprise that Mrs. Molton looked as if she had been weeping, and that Mr. Molton replied sadly, "Yes, interesting, but it is very terrible." The Professor, who was as kindly a soul as ever lived, felt pricked to the heart. "Surely," he thought, "they must have lost a son or some relative. I beg your pardon," said he kindly, "I hope none of your friends were in the fight."

"Don't you know," said Mr. Molton gravely—"don't you know that poor Rollo is dead?"

"Rollo!" said the Professor. "I saw that some lives were lost, but I did not see that name in the despatch."

"Oh, Rollo!" said Mr. Molton. "But have you not seen the paper?" So saying he handed a copy of the *Daily Paper* across to the Professor. He glanced hurriedly over the page. It was part of the chapter in "The Romance of the World." It was written with all the vividness of a despatch from the heart of Africa, and yet it seemed to be a continuation of a narrative which had already appeared. It told the tale of the onslaught on the English camp, and described how, in the confusion, Rollo Brook, who had been the guide and pioneer of the force, had been shot through the heart by an Arab as he was rushing from his tent.

The Professor looked up mystified, and said, "But I don't know Rollo Brook."

Mrs. Molton rose and left the room. Her husband said, "My wife does not care to speak about it, and in fact we all feel that we have experienced a personal loss. You will probably be surprised to learn that Rollo Brook is the hero of the story which forms the chief feature of the *Daily Paper*. There are many people who read it simply and solely for the sake of the story."

"What story?" said the Professor.

"When the *Daily Paper* was started," said Mr. Molton, "the editor announced that, as many people would never read the history of their own times unless it was served up in the shape of a novel, he had made arrangements to tell the story of the world in the form of an endless romance, all the incidents of which would be supplied by the news of the previous day. There were difficulties in the way at first, but after a time he succeeded in getting together a competent staff of journalist-novelists who made a special study of the art of presenting all the important events of the day in chapters of an endless romance of the English-speaking race. Everything is in that story, and any one who reads it clearly will find that he has a very good understanding of contemporary politics."

"Well," said the Professor, "but what has this to do with Rollo?"

"This," said Mr. Molton. "While every one who is anything figures in this world story, which began with the first number of the *Daily Paper* and will continue as long as the *Daily Paper* lasts, there are a great number of purely fictitious characters. Some of these have been delineated with such lifelikeness and dramatic power that they have become much more real to the readers of the paper than the true flesh and blood figures whom we meet every day. I can assure you that when we opened the paper this morning and found that poor Rollo Brook had been killed, all exultation for the British victory died from our hearts. And it is the same everywhere. Look at the waiters, you will see they are all as gloomy as mutes at a funeral. Rollo was a great creation of the leading novelist of the staff, and his adventures have been followed for weeks and months with intense interest. It was really too bad to kill him now," said Mr. Molton grimly.

So saying he departed, leaving the Professor to his own meditations. He had not finished his breakfast when a chance acquaintance, whom he had met in the smoking-room, came in.

"How are you this morning?" he said. "Have you heard the news? It has given me such a shock!"

"What news?" asked the Professor, astonished.

"What news!" exclaimed Mr. Johnman. "Haven't you seen the paper? There is only one piece of news in the paper to-day! Everybody is talking about it; the flags on the Emancipator building are flying half-mast high. You see, every one hoped that Brook would have come back with flying colours from the expedition and married Edith."

"Who is Edith?" asked the Professor, bewildered.

Johnman looked at him with scorn. "Don't you know Edith? You don't know anything! I have not time to tell you, but read the paper for yourself."

The Professor promptly asked a waiter to bring him a copy of the *Daily Paper*. He then read the chapter from beginning to end. As he read, he began to understand how the death of this fictitious hero should have caused more excitement than the brief telegram of the victory. Rollo had evidently been a man of heroic daring, with the generous traits of character which endear an adventurer to the popular heart. The story of his death seemed to give a touch of personal interest to the news from the heart of Africa. Even the Professor began to understand that he had never felt before the terrible reality of war and the price at which even the most brilliant victories are bought.

"What a capital idea!" he exclaimed, as he laid down the paper. "Not a whole bushel of leading articles or pages of special correspondence would have succeeded so well as this in bringing home to the ordinary man, still more to the ordinary woman, the real significance of the event."

On going out he saw that the flags were really flying half-mast high on the Emancipator building.

"Really this is too much," said the Professor. "To have half-masted your flags for a man who never existed is making your realism absurd. I must go in and remonstrate with Sterling."

Saying this he walked down to the *Daily Paper* offices. On asking for Sterling he was informed that he had gone home, but that Mr. Grant, who was in charge, would be delighted to see him. Dick received the Professor in Mr. Sterling's room, which was constantly occupied either by the editor or his assistant.

"I am delighted to make your acquaintance in your new capacity!" said the Professor. "Why, you are almost a bigger man than Sterling," he added with a laugh. "But I just came round to ask you if you do not think that you are rather overdoing your story with the half-masting of your flags? The story is good, but the half-masting is too much."

Dick looked grave. "Oh," he said, "you don't understand. If you had for the last six months followed the fortunes of Rollo Brook day after day—not every day, of course, but whenever the world movement went his way—you would not think that it was strange that we were flying our flags at half-mast high. He is a real person to us, and more real as a creation of our own minds than if he had been born in ordinary course at the other end of the world. You think it is strange," continued he. "Why, our flags are not the only ones which are half-mast." So saying, he led the Professor to the window, who, on looking round, could see at least half-a-dozen flags in the river flying half-mast high.

"No one proposes that this should be done—but it is done. When a popular hero dies every one has lost a personal friend."

"Astonishing, astonishing!" said the Professor.

"Why astonishing? Why, we have had all the bells ringing when one of the heroines was happily married. We did not pay for the ringing; it was the method by which the people expressed the jubilation that was in their hearts. And is it not more natural that they should be more jubilant over a creature of the imagination than over a prosaic man or woman whom they have not realised? They realise this man, that is all. On the astral plane thoughts are things, and these creations of the imagination, as you call them, are none the less real because they are not materialised into flesh and blood. But," he said, changing his tone, "would you not like to go upstairs and

see the department which is entirely devoted to the production of the Romance of the World?"

"Certainly," said the Professor; "the place where you manufacture heroes and heroines, whose death eclipses the gaiety of nations, must indeed be a laboratory worth seeing."

Then Dick led the Professor up a flight of steps to the rooms immediately overhead.

"Perhaps," said he, "it will be best to go at once to the African room, as that was the scene which was described this morning." The room was empty, but the Professor could not help marvelling as he entered. It was if he had been suddenly transferred to Africa.

"Why," he said, "this is an oven!"

"Oh, the heat has not yet been turned off," said Dick. "When our novelists are writing they are placed in the same temperature as the heroes whose adventures they are describing. It is astonishing what a difference the thermometer makes. Last night it must have been terribly hot here when the news of the battle was being worked up."

"I should just think so," said the Professor. "I should prefer to sit outside this room even now. But when you describe Nansen's adventures do you freeze your men alive?"

"We have a frigidarium," said Dick. "The only difficulty is to keep the ink from freezing, but all our writers maintain that nothing gives more reality to their descriptions than the realism of the thermometer."

The Professor took a chair outside the door, and looking in saw that the whole room was arranged like the camp of an African explorer.

"You see," said his companion, "that everything as far as possible is real. That gun standing in the corner accompanied Stanley's expedition across Africa; those tom-toms leaning against the window were played during the massacre of one of our poor fellows, and were brought back as a trophy by the expedition which avenged his murder. We believe immensely in the psychometric influence of relics, and whenever it is possible we collect as many relics as we can get from the scene that the novelist is describing, so as to enable him to write his description the more vividly."

"I hope you don't carry your realism so far as to have mosquitoes and ants?" said the Professor.

"No," said Dick, "we must draw the line somewhere, and we draw it at mosquitoes and ants. But if you will venture within our African tent I will show you another arrangement that we have."

The Professor somewhat gingerly entered, and was invited by his companion to look through a stereoscope which was fixed in the wall.

"We are very proud of this arrangement," said Dick. "It is the best that can be procured, and if you will look through it you will see what pains we take to get all the details faithfully reproduced in our romance."

The Professor looked, and in the brilliantly illuminated stereoscope he saw, as if in a panorama, a series of African pictures.

"I will show you in brief," said Dick, "the history of the expedition, as given by the last photographs received from the camp."

"I see the photographs are coloured," said the Professor.

"Yes, but we are most careful that the colouring should be exact."

The Professor noticed that, interleaved as it were with the photographs of scenery and of African life, were pictures representing the progress of the expedition, and photographic charts. In the foreground of the column he saw a slight, active young fellow, in whom he soon came to take an almost personal interest. Now he was stalking an elephant, then he was engaged in a hand-to-hand fight with the Arab

slave-traders, or he was in a death-grapple with a lion. He noticed also the figures of the other leaders of the expedition, and became so absorbed in watching the pictures that he hardly spoke excepting to give an occasional exclamation of surprise. Then his companion turned on the last scene. There was the camp, surprised by the Arabs. He almost seemed to see the muzzles of their guns, from which the fire-flash was streaming. There were the white tents of the British expedition, and far over head the stars shone brightly. Everywhere was life and movement: soldiers were scrambling for their rifles, or struggling desperately against their assailants; and right in the centre of the scene he saw the figure of the young man—whom he had watched with so much interest in the previous pictures—rifle in hand, falling backwards with a death-wound in his chest.

"Confound it," said the Professor, "that is too bad," and he used some strong language which cannot be reproduced here. "I have not the patience to look any more."

"Yes," said Dick, "it is too bad. But perhaps now you will not be so surprised that our flags are flying half-mast high."

"Oh, the devil!" said the Professor. "Do you mean to say that that was all imagination?"

"So far as Rollo Brook was concerned it was imagination," said Dick, "but all the rest was real enough. And although Rollo Brook never existed, there are other Rollo Brooks who will be mourned by their mothers to-day; and the mere question of the name is a detail."

The Professor said no more. They went out to see the arrangements of the other rooms. The largest room was devoted to what might be called the property store. Each room was carefully arranged for the scene of the story. Of course sometimes when the telegrams arrived late it was not possible to do this, but generally the surroundings of the scene were supplied. The best idea of the way in which these rooms were fitted up can be gained by imagining a miniature reproduction of any of the large panoramas, in which real lay figures are introduced, as well as pictures representing the landscape. A staff of scene-painters was kept constantly busy. The magic lantern and the stereoscope were employed to increase the effect; and everything in short was done to enable the novelist-journalist to see with his own eyes the scenes which he had to describe for the reader.

This department was in immediate communication with the great indexing establishment above. This indexing of news-cuttings formed a great feature of the *Daily Paper*. All news-cuttings relating to any subject were carefully stored and indexed, and a writer on any special subject had simply to press a button and say what cuttings he required, and in a very few moments they were on his table, numbered and labelled.

"You have no idea," said Dick, "what an effect this has in revivifying the interest of the common people in the events of the world. Our one difficulty is that our fictitious characters, as the present case illustrates, tend to overshadow the real personage in the drama. We often have deputations more or less formal, and sometimes crowds, demanding information as to what has happened to one of their favourites, exactly as they would if there had been a bye-election on which the fate of a Ministry depended. The story has the widest circulation of any of our publications. No number of the *Daily Paper* has ever yet appeared without a chapter of this romance, and at the end of the week we reprint it in a halfpenny supplement to the weekly paper, which is sold at three halfpence. At the end of six months it is published in a volume, and we maintain that if any one has read our twelve half-yearly volumes he will know exactly

what has been going on in the world since the paper was started."

"Is everything written here for the novel?" said the Professor.

"Oh dear me, no," said Dick. "Just as newspapers used to have special correspondents, so we have novelist-journalists told off to accompany every important expedition, and to visit the scene of every important occurrence which can be foreseen long enough to provide for it. Every novelist-journalist also collects relics, and as a result, with these and the constant output of our scene-painters and waxwork artists, we are rapidly accumulating materials that will stock a museum. We have already opened one in Bethnal Green, which is much more popular than the great Bethnal Green Museum; and as we have branch establishments in every large town in the kingdom, these relics, etc., will go on circuit. The one idea which dominates everything is to make the life of the world real and vivid to the people of the world, and primarily, of course, to our own people. In such an interesting world as this no one ought ever to be dull. Interesting events are happening every day; the only difficulty is to get people to see them, and that is what we are endeavouring to do. But," said Dick, "if you are not tired, you must come and see our news-cutting and indexing department. We are very proud of it, as it is one of those institutions which has never existed before, and which we have created not merely for our own good, but for the benefit of the public."

Mounting another flight of stairs, they found themselves in another series of spacious rooms. "Oh, Miss Widdrington," said Dick, "I wish to introduce to you Professor Glogoul, who has just been appointed Social Coroner to the Prisons Department of the Civic Church; he wants to see your news-cutting and indexing arrangements."

"It is all very simple," said Miss Widdrington. "The only difficulty is to select which papers are to be indexed. When that is done, everything is as simple as A B C."

"How simple?" asked the Professor.

"We get half a dozen copies of each paper. One copy goes to the indexing staff, which indexes it; the others go to the news-cutting department, where they are cut to pieces. One set of the articles is pasted into guard-books, while the fellows to them are kept in envelopes."

"Don't you have much duplication?" asked the Professor.

"Yes, certainly; but it is better to duplicate than to miss. If, for instance, Sir Alfred Milner, the present Finance Minister for India, makes a speech upon the appreciation of the rupee, it is indexed and cut under three heads: India, Milner, and Finance."

"You will require a large staff."

"Yes," said she, "a very large staff; it is no use doing things by halves. If I cannot in six minutes put my finger upon any speech that has been made in the last six years and reported in any one of the papers selected for indexing, I consider there is something wrong."

"But are your indexes up to date?" asked Glogoul.

"We have night and day staffs, and the night staff does not leave the place until the last of the previous day's papers has been indexed and cut."

"Oh," said the Professor, "then the other papers won't be anywhere compared with you?"

"Oh," said Miss Widdrington, "you mistake; there is not a newspaper man in London who would not be welcomed here. We cannot, of course, undertake to supply them with the cuttings, but we give them the references."

"Do you mean to say," said the Professor incredulously, "that if I wanted all the references to, say, Criminal Penology within the last six years, you could supply me with them?"

GOING TO A SHELF SHE REACHED DOWN AN INDEX LABELLED "CRIM."

"Certainly," said she; and going to a shelf she reached down an index labelled "Crim." "Let us see, Criminal Penology," she said: "that is what is dealt with by Lombroso, and Macdonald, and other people of that kind?"

"Yes," said the Professor.

"Here you will find them," and she displayed before the Professor's eyes several pages filled with references to articles on the subject which had appeared in the newspapers of all nations.

The Professor's eyes lit upon one entry. "Here," he said, "is the thing I have been looking for for years: It is a report made by the University of Lilliput upon Mantegazza's measurement of the Craniums of Murderers. I see you have it indexed as appearing in the *Diritto* on January 3rd, 1894. Can I see that?"

"Certainly," said Miss Widdrington, and pressing a button a lady, neatly dressed in the fashion with which the Professor was rapidly becoming familiar, answered the bell. "Bring me the cutting under Criminal Penology that appeared in the *Diritto* on January 3rd, 1894," said Miss Widdrington.

"Immediately," said the girl.

"Let us follow her," said the Professor.

They followed the girl to a large and airy room. She took down a book which was labelled "Crim. 1894," and turned up the index and produced the cutting.

"This is pasted," said she, "but perhaps you want it loose."

The Professor feasted his eyes upon his long looked-for report, and hardly noticed that the girl called out the number "C 2, 25" to a younger girl, who proceeded to a case where the cuttings were kept, produced the C 2, 25 without the loss of a moment, and handed the same to Professor Glogoul.

"Well," said he, "this beats anything I have ever seen! And you can do the same with any other subject?"

"Anything," said Miss Widdrington. "There is nothing which has been reported in the leading papers of the world in the last six years which we cannot produce at least as soon as we have produced this."

When the Professor was deep in the "Report of the University of Lilliput," Miss Widdrington said to Grant, "Do you not think you had better take him across to our great Indexing Office?"

"Directly," said Dick.

"Well," said the Professor, as he had finished reading the report, "I have hunted for that for years. I knew it appeared somewhere, but I could never lay my hands upon it. May I take a copy of it?"

"Certainly," said Miss Widdrington; "you will find a room set apart for those who wish to copy from our records. It is sometimes rather crowded, but we can always make room for you."

"Well," said Dick, "Miss Widdrington suggests that I should take you over to the great indexing office, which is not an annexe of the paper, but one of its off-shoots. It is some little distance from the office, because indexing needs room and light, and we could get better premises further from the river. Telephone to Mr. Waller and ask him whether or not he could see the Professor. Perhaps one of your young ladies could take him round."

"By all means," said Miss Widdrington.

Mr. Waller was at the office, and would be very glad to see the Professor, so bidding Dick good-bye, he fared forth with his guide, who buttoned a light skirt over her nether limbs, civilisation having not yet sufficiently advanced for the gymnast costume to be worn in the public street.

He found Mr. Waller engaged in no less a task than the indexing of all the literature of the English-speaking language. Mr. Waller announced this as simply as if it had been the task of delivering a ton of coals or the buying of a railway-ticket.

The Professor gasped. "Well," said he, "you have got a pretty big place here, but I should not think it would be large enough to hold your indexes alone."

"Oh yes!" said Mr. Waller. "The College of Indexers, in which you are standing at the present moment, grew out of the *Daily Paper*, and was founded by the Fellowship. People began to see the folly of perpetually writing books without creating an index to their contents, and after a time it was decided to found this College in order to focus the energies of an immense number of volunteer indexers all over the world. The idea," said Mr. Waller, waxing enthusiastic over his favourite theme, "came to me from the compilation of the great English Dictionary. The same principle of co-operative effort seemed to me to be equally feasible if applied to all literature. It only needed subdivision. And though we are called a College of Indexers, we are really a College of Subdividers. The work is done by people all over the world. We endeavour to make our index so explanatory as to be a summary of universal literature."

"That is to say," said the Professor, "supposing I wanted to build a pigsty——"

"If you came to me," said Mr. Waller blithely, "I could tell you every work which has been published on the building of pigsties in the English language in America, the colonies, and at home, and also every reference in every

book and agricultural manual in which the subject of pigsties is dealt with. These would not be a mere list of references, but would be a description of the nature of each work, and you would get a *Catalogue Raisonné* of all the literature in the English language relating to pigsties."

"How can this be done?"

"It is being done at the present moment, and before long we hope to have this gigantic work printed and rendered accessible for the universal use of men. Nothing like it has ever been done before. We will also publish an abridged index, which will be more manageable—say not more than a thousand octavo volumes. You see, that although this is not a branch of the *Daily Paper*, it is indispensable as an adjunct to it. Sterling got the idea that the *Daily Paper* ought to be able to tell everybody everything about anything or anybody at a minute's notice. It was no use assuring him that it was impossible; he said that what the Roman Church could do in the Middle Ages could be done now and on a more extensive scale. It was all a question of organisation, and so it came to pass that the College of Indexers came into existence."

"If," said Miss Daley, the lady who had conducted the Professor, "you had gone above our offices you would have found the Enquire Within for Everything Department, which is in constant communication with this office and with our department. Any one who wants to know anything has only to write a letter, with a stamp for the reply; and he gets by return of post the very best information that can be given him as to a matter of fact; and direction and guidance in cases of conscience. These are handed over to a special department, and are answered either privately or in the special correspondence page of the paper. Most of our correspondence is by letter, but anything of general interest is dealt with in the paper."

"I will give you an instance," said Mr. Waller. "It occurred only the other day. A member of the Fellowship in a small out-of-the-way village in the Mississippi valley, wrote for information as to the best way of getting to a plantation in Assam. He had to start in a month, and had not a ghost of an idea as to how to go or what it would cost. By return of post we mailed that man a brief but comprehensive statement, showing him exactly the time he had to leave his village for the junction from whence he would proceed to New York; the steamer in which he must cross the Atlantic, and the hotels at Liverpool and London at which he ought to stay. We gave him full particulars as to the P. and O. steamer which would take him to Calcutta, and furnished him with information as to the line of steamers on the Ganges, and the railway which would land him at his brother's door. We gave him the names of all the consuls of the Fellowship in each town through which he would pass, and sent him prospectuses of the hotels and of the railway and steamship companies over whose lines he would travel, calculated the cost of the journey to a penny, and sent him the whole by return of post."

"Well," said the Professor, "this is what I call organised omniscience!"

CHAPTER XI.

ENDOWED DEPARTMENTS.

THURSDAY the Professor and his wife attended one of Lady Sidney's receptions, which she had made so potent as a nerve-centre of the English-speaking world. Everybody of any importance always made it a point to look in at her receptions. Tuesday was the foreign night, while Thursday was more distinctively English. On Tuesday every language under heaven might be heard within the walls of her

reception-room. Ambassadors, princes, representatives of art, literature, and science abroad, met the flower of English society. But on Thursday, though no language but English was spoken, it might be heard in all its variations of dialect and intonation. The English, however, as it was spoken by Lady Sidney and in the National Theatre, was rapidly coming to be accepted as a standard by all the communities of our world-encircling race.

The *Daily Paper* became the great exchange of the English-speaking people who found themselves in London. Any one who came from the uttermost parts of the world could find at the office a list of all those who had come from his village, his colony, or his state, who were at that moment in London. A whole staff of clerks was placed at their disposal for tracing old pedigrees and for hunting up acquaintances. More important, Lady Sidney set an example to all those who were possessed of good houses, especially if they had a history attached, in the neighbourhood of London. She made it a point to invite eminent colonists and Americans to enjoy her hospitality. In this way fresh links were knit between the old families in England and the families of the Republics which had sprung up all over the world. The mother country became more and more the home of those adventurous races which had swarmed from her shores, and instead of finding himself a stranger in a strange land, the colonist or American no sooner landed in London than he was taken by the hand and welcomed to a wide circle of friends. No distinction was ever made between a colonist and an American; any man coming from abroad who could speak English was welcomed as a member of the great race, and allowed free use of all the advantages, social, political, and otherwise, that were at the disposal of the *Daily Paper*.

In furtherance of Anglo-American reunion, Whit Monday was celebrated as a great united fête. The day became to the English-speaking world what the Fourth of July is to the States of the American Union. It began in a small way. A few friends met together on Whit Monday to strengthen themselves in the work which they had undertaken for the reunion of the race. The idea spread rapidly, and from a private meeting of a few the movement increased till there were public meetings, and in the third year a great popular demonstration. By the fifth year Whit Monday was celebrated as a fête all over the world wherever the Stars and Stripes, or the Union Jack, floated. For a hundred years the Americans had used the Fourth of July for the purpose of exciting animosity against George III. and the mother country. The new International fête day had exactly the opposite motive, and each year tended to draw the English-speaking world into a closer race alliance. And it was everywhere proclaimed that when the Dominion of Canada was formally merged in the Republic, the ceremony would practically be the consummation of the wedding between the two great branches of the English-speaking races.

The idea mooted in 1892 of holding Olympian games for the English-speaking race was carried out under the ægis of the *Daily Paper*. Lady Sidney officiated as queen, and distributed the laurels to the victors in the great contests; and the competitors went to their homes beneath the Southern Cross or on the Pacific Slope feeling that in her presence they had been for a moment united. Tennyson's "Idylls of the King" seemed much more possible after the strangers had seen Lady Sidney, supported by Nedelca and Lill, distributing the parsley crown or the laurel wreath.

Although the influence of the *Daily Paper*, and the Fellowship on which it rested, was chiefly felt in English-speaking lands, it also exercised a great influence over those who did not speak the tongue which Shakespeare spoke. This

was brought about by an extension of the principle which Sterling had explained when first he saw Lady Sidney in the Colosseum—namely, the endowment of departments of the paper for special work. In the early history of the paper a patriotic Russian approached Sterling and asked whether he would be willing to despatch two or three competent special correspondents to Russia for the purpose of letting daylight into the dark corners of the Empire. Sterling at once replied that however useful it might be, he did not see how it was possible to spare sufficient space to publish the articles in order to justify such an expenditure.

"Now, my dear friend," said Prince Godonoff, "I shall be delighted to place at your disposal £5,000 a year for this purpose, and with this you can maintain your special correspondents. They will have the status of being the representatives of your paper; they will collect information which will be stored in its archives. If it be good for the paper to publish any of these reports you will publish them, but you need not necessarily publish anything. You will know the facts, and the mere presence of an incorruptible, intelligent, accredited representative of the *Daily Paper* will help to make the wicked tremble, and give hope to the honest men in our administration."

Sterling told him to call again in a fortnight. That night he took the mail for Gatschina. There he explained to the Emperor exactly what he wanted. He also told the Tzar of Prince Godonoff's proposal.

"Now," said he, "no one knows better than your Majesty the difficulties which these representatives of mine will have to encounter when they set to work without fear or favour. I can assure you that there is no disposition on the part of Prince Godonoff or of myself to increase the great difficulties of governing your empire. On the contrary, my idea is that these representatives of the *Daily Paper* would be very useful to your Majesty, more useful, in fact, than to any other person in the world. I should propose that they should come here first of all and satisfy you as to their sincerity and honesty. I should also propose that copies of everything that they write should be forwarded to you in duplicate. At any time they will hold themselves in readiness to repair to Gatschina to defend the truth of any statement they may have made, and to prove all the facts which they describe in their correspondence. If at any time they lose your confidence, I will recall them and replace them by others who will, I hope, have the supreme confidence of your Majesty."

"But on what principle will these correspondents of yours make their inquiries?" asked the Tzar.

"Upon the principle that two and two make four," said Sterling simply. "They will be Knights of St. George despatched on a Holy War against robbery of all kinds, especially the methods by which your Majesty is deceived and your subjects defrauded."

After some hesitation the Tzar consented tentatively, and the correspondents began their work. One of them was fortunate enough to light upon a flagrant scandal which involved the plunder of some millions of roubles. No one had dared to speak of it, much less display the fraud in its colossal dimensions. The correspondent, however, by simply presenting the facts of the case succeeded in destroying the whole fabric. The chief offenders were banished to Siberia, and their ill-gotten gains were confiscated. The correspondent was summoned to Gatschina, offered a decoration, which he refused, and specially complimented by the Tzar on the service which he had rendered to Russia.

Still more remarkable was the success which attended the establishment of the Knights of St. George in the Ottoman Empire. An old ironmaster of New York, who some years ago had had the good fortune to make a singularly favourable

impression upon the mind of the Sultan, went back to Constantinople to ask the protection of the Sultan for the correspondent. The Sultan at first shook his head. He said he did not like newspaper correspondents making mischief.

"But," continued Abdul Hamed, "what standard do you propose to apply to my country, which is not so civilised as the West?"

"We have only one standard for East and West," said Mr. Drewitt adroitly, "and that is that two and two make four."

"That may be true in the West," said the Sultan gloomily, "but in my country when taxes are collected two and two seldom make three, and often make no more than one. If your correspondents can secure that two and two make four in my Empire, the blessing of Allah be upon them, infidels though they be!"

So it came to pass that two smart American correspondents armed with a firman from the Sultan went on pilgrimage through his dominions. They became a terror to corrupt pashas and to plundering officials of every grade. They even persuaded the Sultan that it would be money in his pocket to Lebanonise Armenia. And that great work of political reconstruction was one of the first and grandest political triumphs of the *Daily Paper*. Comparatively little of the contents of the reports of these commissioners were published in London. Once in a way, when the occasion called for it, a special supplement was published containing the more salient portions of their despatches. The cost of the printing and distribution was defrayed by the funds provided for that purpose.

By degrees there grew up a whole series of specially endowed departments, which stood to the *Daily Paper* in the same relation as colleges stand to the university. Baron Hirsch endowed a Jewish Department with £10,000 a year, by which five special correspondents were maintained, whose duty it was to observe and record for the archives of their department the evidence as to the condition of their race in all parts of the world. The same principle was carried out in other directions. There was often very little to show in the columns of the *Daily Paper* of this immense organisation of special correspondents all over the world. The information of these agents was carefully stored in the central archives; and whenever the occasion demanded it, a supplement or an extra of the *Daily Paper* would be launched and distributed by the hundred thousand over the whole kingdom. For effectiveness no method of political propaganda was comparable to this.

Although Sterling accepted all these endowments, it in no way crippled his absolute freedom in relation to the management of the paper. Every one of the special correspondents appointed under the various endowments was as absolutely under his orders as if he had been paid directly from the treasury of the paper. Sterling held that the prestige of being a representative of the *Daily Paper*, and the opportunities which that position gave a correspondent, cast into infinitesimal insignificance the detail of the source from which his salary came, or his expenses were paid.

In addition to these special correspondents and commissioners, there was not a Legislature in Europe which had not one or more of its most distinguished members acting as the unpaid correspondent of the paper. Every Legislature in the States and in the Colonies contained at least one representative no less zealous and intelligent because he was unpaid. He was proud to represent the *Daily Paper*.

Every Fellow was more or less a reader of the *Daily Paper* and its supplements, and in every part of the world it had its consuls; just as the Cycling Touring Club has its consul in every populous centre in England and on the

Continent. These consuls were the accredited representatives of the *Daily Paper*, and undertook on appointment to report everything that happened in their district which would be of advantage to the Fellowship at large.

It was in the newspapers, however, and among journalists that the influence of the *Daily Paper* was greatest. At the *Daily Paper* office, any person who wrote for the press, no matter how insignificant his paper might be, was received with hearty freemasonry so long as his honour was unstained and his character unblemished. All the advantages of the central office were placed at the disposal of any journals of any nationality. But the doors were resolutely closed against any man who was known to have been guilty of a dishonourable action, such as the publication of an interview without offering the interviewed person a proof, or of making public a private conversation, or of abusing his position to levy blackmail. The influence of Lady Sidney and her daughter was of incalculable advantage in maintaining a high standard of manners and of morals among the Bohemian fraternity which frequented her *salon*. No genius, however great, no position, however splendid, in the world of journalism, politics, literature, science, or art, was sufficient to break down the veto pronounced by Lady Sidney upon all dishonourable men, especially if they had been dishonourable to women. Lady Sidney, therefore, exercised over a wider world that position of custodian of the manners and morals of society which the Queen used to occupy in her younger days. Not that the rules of the court on the Thames Embankment were applied with Draconian severity. But they were for the first time applied with an even hand to both the sexes, and the only condition of restoration to the forfeited position was penitence and reformation. There was no attempt to dictate, still less was there any inquisitorial searching into the private character of individuals; but a special junta of two men and a woman was intrusted with the duty of deciding what persons were or were not to be placed under the monastic excommunication of being forbidden the precincts; and the same authority also decided on what terms the boycott should be raised.

The only Canossa which the Hildebrand of the *Daily Paper* insisted upon was the public confession of guilt and an expression of contrition, which, should the offence have received the same degree of publicity, was to be published in the columns of the *Daily Paper*. After such public penance had been done no allusion was ever made to the offence, and it was supposed to have been entirely blotted out from the public mind. Many curious contrasts arose owing to this method of dealing with the question. Many men who were admitted to the Court at Buckingham Palace were rigidly excluded from the Court on the Thames Embankment; while many women who were debarred from appearing at a Drawing-room of Her Majesty were cordially welcomed in the *salon* of Lady Sidney.

"I would rather receive Mary Magdalene than make a friend of Judas," was the only reply which Lady Sidney gave to an acquaintance who protested against her shutting her door upon a distinguished noble, at the same time that she received the guilty, but penitent, partner of his crime.

Lady Sidney, Nedelca, and Lill never lost an opportunity that was afforded them of encouraging their own sex to overcome those disabilities which formerly were imposed both by nature and by society upon the weaker vessel. There was no idea of making women mannish, but no effort was spared to make them strong, healthy, and intelligent by developing their self-reliance and self-respect. Whenever women were found willing to try a new thing, even although it might not be quite practicable, they were encouraged and helped. When, for instance, women

began to take to bicycling, Lady Sidney offered to supply, free of charge for one year, a bicycle to any woman who would brave the ridicule which is always heaped upon pioneers by touring on the cycle in a cycling costume. Great is the power of wealth, and even greater is the power of public opinion! When both are combined, and in addition are reinforced by the example of a lady in the first rank of society, they are irresistible.

"Really," said Sterling one day to Lady Sidney, "if you go on like this much longer a girl will no longer feel that she is born into the world with a grudge against her Maker for not having made her of the other sex."

The practice of publishing special supplements to which we have referred was carried to a very great length. As the paper was delivered from door to door every morning, it became a valuable medium for publicity. From almost the beginning the special supplements, containing advertisements of situations wanted and situations vacant, raised the number of pages from forty to sixty. At election times the important manifestoes of the various candidates in different constituencies, and of the party leaders, were inserted and distributed with the *Daily Paper*. By this means the paper was always kept general in its scope, so as to afford a mass of interesting reading for a wide range of readers; while special features were dealt with by insets and supplements, which paid for themselves, or were paid for by endowments. The publication business of the paper was immense. In addition to the *Daily Paper* there was the weekly edition with the halfpenny supplement of the story, which was also sold separately in enormous numbers throughout the Colonies and the States of America. There was also published another weekly, for general distribution as a kind of popular tract, containing the reprint of the pages devoted to the Morning Service and to the saint of the day. In addition to this there was issued a Sunday-reading paper, which was partially made up from the dailies, but contained much fresh matter; and included, among other things, a religious novel, based on the principle of the Romance of the World, but dealing more particularly with religion and philanthropy and with the leaders in all good works, both in and out of the churches. But what Sterling prided himself most upon was the publication of the *Daily Paper Classics*. When he was a lad he had gained much of his information from the various series of Chambers' Tracts, and he had always looked forward to the time when he would be able to publish something like those tracts on a larger scale. With the immense number of machines which he possessed he had an unequalled plant for turning out at the minimum price the popular library of the literature of the whole world. A complete classic was published at threepence in paper cover. The size was always uniform with the *Daily Paper*. By this means every cottager in the country could put a hundred of the best books of the world upon his shelves for twenty-five shillings. In addition to these there was an enormous production of pamphlets, leaflets, and tractlets of all kinds, written in the service of the Civic Church and for promoting the objects of the paper.

Among the other works of the *Daily Paper* was the compilation and the publication of an English Bible. This was a work in which many of the leading men of the day had combined to produce a volume from English history which would be to the English what the Hebrew Scriptures were to the Jews. So great was the demand for the English Bible that, in the first three years after its publication, over a million copies had been sold, and it was to be found side by side with the Hebrew Scriptures in the box of every emigrant. It constituted a compendium of all that was most glorious in English history, or most valuable in English literature.

The Feister machines went with even greater regularity

than the guillotine during the Terror; and with every revolution they scattered seeds of enlightenment throughout the world.

CHAPTER XII.

DE OMNIBUS REBUS ET QUIBUSDAM ALIIS.

ON Friday Professor Glogoul began his career as Social Coroner by holding an inquest in Holloway Gaol on the person of an habitual criminal who had just been sentenced to a long term of penal servitude for burglary. On completing the inquest the Professor returned to lunch in high spirits.

"Wonderful!" he said. "The Social Inquest will yield inexhaustible materials for the philosophy of life. At last we shall begin to understand the science of conduct, and to readjust the environment which at present produces criminals as the earth produces weeds."

Nedelca had insisted upon the Professor coming to lunch with her, and she was listening with great interest to his enthusiastic account of his first experiment.

"You never saw anything more wonderful in your life," said he, with enthusiasm. "I soon made friends with the man, who was delighted to see any one who approached him from a different standpoint from that of the chaplain who preaches at him, or the turnkeys who lock him up, or the officials whose attitude is always one of condemnation. I was hail-fellow-well-met with my burglar, and in five minutes we were chatting together as if I had known him all my life. I had a shorthand writer with me who was equally sympathetic, and in return for a smoke my burglar gladly consented to be hypnotised. I found him a wonderful subject. As soon as he was well under the mesmeric sleep I suggested to him that he was a boy of six. Immediately the old criminal's features relaxed, and he began prattling about his home in the country. I have never seen a more wonderful case. The man of sixty became the child of six, with a child's ideas, a child's hopes, and a child's fears. He simply lived over again with the accuracy of a phonograph all the scenes of his childhood. After a time I shifted the suggestion to his twelfth year, then to his eighteenth, then to his twenty-fourth, and so forth until we came down to the present day. The result of this morning's work is that I have an absolutely correct account of the permanent impression left of the subconscious memory of the man which enables us to trace with absolute fidelity the course of the criminal. It was splendid. I have never had such a success in my life."

"Did you let the poor fellow have a smoke when you had finished with him?"

"Yes," said Glogoul. "At first the governor was very much scandalised, but on hearing the account which the prisoner had given of how he murdered a man some twenty years ago—which we have never been able to bring home to him—he declared that the fellow deserved his smoke."

"Was he really a murderer?" asked Nedelca.

"Oh, yes, certainly; he told us about two men he had killed."

"What a monster! Then won't he be hanged?"

"No," said the Professor; "all communications made by a prisoner under hypnotic suggestion are absolutely privileged. They may be used in building up the science of life, but they are not to be used against him. But this is only a beginning," said the Professor enthusiastically. "I think in time we shall be able to transpose souls."

"What do you mean?" said Nedelca.

"Oh!" said the Professor. "Surely you are familiar with the phenomena of a possession or obsession—when a man suddenly forgets all that he once remembered, and

becomes to all intents and purposes a new man, with a fresh set of memories, of inclinations, and of instincts. The transfusion of the intelligence is by no means unknown to the scientist."

"Oh, I see," said Nedelca, "just as you transfuse blood, so you can transfuse personality."

"Yes," said the Professor. "But I think that we shall be able to go further than that. I think that it will be possible to mix them—that is to say, to arrange for the temporary possession of the body by a superior intelligence. We see it in the ordinary trance when a weak woman becomes as strong as Hercules under the control of a powerful spirit. Why should this not be systematised, so that a weak personality, in the case of an emergency, had as it were the loan of a stronger one? By the bye," said he to Nedelca, "what progress have you made with your Bureau of communication between the visible and the invisible world?"

"Oh," said Nedelca, "have you never been to see the Bureau? The towers on either side of the *camera obscura* are entirely devoted to the research in Borderland. Mr. Sterling says that it would be quite impossible for him to edit the *Daily Paper* without the assistance he constantly receives from the occultists, who have dedicated their gifts and their learning to the service of humanity. One of the towers is devoted to the future, and the other to the past. Some day when you go up you will see our astrologer, who is constantly employed in casting horoscopes with his band of assistants, and in endeavouring to read, so far as he can, the future in the stars."

"That is all bosh," said the Professor. "How can you read the future from the stars?"

"It may be all bosh," said Nedelca, "but they do it somehow. They often blunder, of course; but the experience of the last six years has shown that they often give an invaluable hint as to what is about to happen. The newspaper cannot afford to neglect any source of information. Our astrologer will report, for instance, that a certain personage will die on a certain date. The chances are, you will say, that he will not die on that date. If there is only one chance in ten it is worth while preparing for it. The great art of journalism, as Mr. Sterling is always saying, is to be prepared; and no editor worth his salt would neglect a channel of information which would give him one straight tip out of ten. But the whole thing is shrouded in such mystery, that whereas its prognostications justify preparation, they do not justify print. But more practically useful than the astrologer is the seer, who is a man with the gift of foreseeing either in a trance or in his natural state. If the astrologer and the seer agree, the rule is that you may safely get your manuscript put into type. The Bureau of Communication, however, is most valuable as a means of personal comfort and spiritual consolation. It would surprise you," said Nedelca, "how little communication the living wish to have with their deceased friends. As soon as they learn that they exist and are well,—excepting in cases in which there has been ardent affection between the living and the departed,—the desire for communication seems to disappear."

"Oh, yes," said Glogoul, "I have noticed that many times. When you see an emigrant ship leave port and you hear the wail of those who are parting, you would think they would make the most of communication by letter. As a matter of fact they don't correspond. The new environment and the new pre-occupations soon reduce to a minimum the points of contact between a mother and a son. So it is, I suppose, with those who pass into the other world."

"Yes," said Nedelca; "it reminds me of a poor old man in Lambeth Workhouse whom I occasionally visit. He had been married fifty years, and we wished very much to get

him to occupy a little room along with his wife, so that they should not be separated in their old age. 'No, miss,' he said, 'I have had enough of she.' That was his only response when I remonstrated with him on his refusal to leave the ward in which he was living with the other men. At the same time, I think that the knowledge that communication is possible, if desired, greatly tends to diminish the grief of the bereavement."

"No doubt," said Glogoul, "the emigrants would weep still more bitterly if there were no post-office. Even if they don't use it, the knowledge that it is there is a great consolation, and I have often wondered," said he meditatively, "whether we humans do not get more happiness from the consciousness of having things within our reach than from their actual possession."

"Oh, here is Mr. Sterling," said Nedelca, as the editor joined them and took an empty chair which had been left for him, and began his lunch.

"We are in the land of the Fourth Dimension," said the Professor.

"You mean you are talking about it," said Sterling. "I have just left it."

"What has happened?" said Nedelca, with curiosity.

"You know, Glogoul," said Sterling, "how much I always believed in the development of telepathy and mesmeric trance as a means of journalistic information. I have just been filling in the details of a telegram received from Khartoum by the aid of our best clairvoyant."

"How interesting!" said the Professor. "And you rely on her?"

"Absolutely. We have tested her so many times that we have come to rely on her communications as if they were despatches from our special correspondent. To-day, for instance, we got a telegram to say that there had been a rally of the Arabs, and that another attack was expected on the Restoration force. I put Miss Randolph over and gave her the telegram, then I told her to go to Khartoum and see what was happening. In a few minutes she had the whole scene before her, and described it as minutely as if she were looking at it through a telescope from a hill in the neighbourhood. Her news was much later than that of the telegram. The attack had been made at five o'clock in the morning, but fortunately our fellows were on the alert, and the Arabs were repulsed with heavy loss. None of our men were hurt."

"Shall you publish it?" said Glogoul.

"We have put it in type, and should no confirmation come we shall print it under the telegrams, stating that this vision was seen by our own clairvoyant. But if a telegram should come confirming it, as I expect, we shall simply publish the narrative as an authentic record of facts."

"That is very good," said Glogoul. "But do you need special correspondents at all?"

"Oh, certainly!" said Sterling. "We need them if it were only to give a trace to the clairvoyant. A correspondent will often see things that a clairvoyant will fail to discover, while the clairvoyant on her part will often see much more than what the correspondent himself can see. But the difficulties of time and space—for in the Fourth Dimension there seems to be no time, and we know that space does not exist—render it necessary to have your clairvoyant always checked by your special."

"May I not pass you the grapes, Professor?" said Nedelca, handing him a magnificent bunch.

"What lovely grapes!"

"You will be surprised to hear where they come from," said Nedelca.

"I suppose they come from your mother's greenhouses?"

"Nothing of the sort," said Sterling. "All the best

grapes are now grown by the pitmen. You see the miners have more leisure than the rest of the population. Their hours are shorter, to begin with, and they seldom work more than four days a week. Therefore they have two clear days, and plenty of time on the others, to devote to subsidiary industries. They used to waste their time—or worse than waste it—but recently, thanks chiefly to Lady Sidney's initiative, they are becoming the great gardeners of England."

"Pitmen!" exclaimed Glogoul. "That is a transformation indeed!"

"No," said Sterling, "it is not such a great transformation. But the real secret of it is that coal is practically costless at the pit mouth. Nearly all our collieries are now in the centre of vineyards, all of which, however, are under glass. Glass is cheap, and the construction of vineries was made a special object of the Miners' Federation, aided by grants from horticultural associations and from the Fellowship Fund. The small coal which is wasted at the pit's mouth more than suffices to heat all the vineries, and as a result grapes are as cheap as cherries, and the miners alternate their hard labour underground with the pleasure of sitting under their own vines and fig-trees in artificial glass-houses."

"You will find a change all round," said Nedelca; "but we must really take you down to Essex, where you will see a whole county turned into market gardens by the spare labour of London workmen."

"That is a transformation if you like," said Sterling. "The land was going out of cultivation, when Lady Sidney approached the County Council and the Local Government Board; and between them they succeeded in laying out the county in settlements, with the avowed intention that every householder in East London should have a garden in Essex. Some of them of course took larger gardens, and many of them took none at all."

"But how on earth do they get to their gardens now that they have got them?" asked the Professor.

"Oh," said Sterling, "that is another thing which has come up of late years. We have a wonderful system of narrow gauge electric railways which intersect the county. This enables any one to get to his garden plot in about an hour at the cost of a penny. But," said Sterling, "to-morrow we are going to have our annual fête. We had better get there betimes to see Lady Sidney give away the decorations for heroism."

"For heroism?" said the Professor.

"Yes," said Nedelca; "that is an idea which mother picked up in Belgium. The national fête there is always commenced by a distribution of rewards to those who have distinguished themselves for bravery in the previous twelve months. The *Official Gazette* publishes an immense list of all those who have saved life by risking their own, and medals and decorations are given by the king. We tried to get the institution established under royal patronage here, but there were difficulties in the way, and so as we did not wish to lose the opportunity, we determined to do it ourselves. A supplement of the *Daily Paper* to-morrow will give an account of all the rewards and of the actions singled out for special recognition, the ceremonies of the day, the service in St. Paul's, and the distribution of rewards in the great hall of Westminster, which is permitted to be used for this purpose by the Prime Minister. Afterwards the sports and fête begin."

"But," said Glogoul, "all this must cost so much money, I cannot conceive how you do it."

"Ah!" said Sterling, looking at his watch, "I forgot I had an appointment with Cardinal Jacobini, who is over here on a most important mission. Wonderful man,

Jacobini! will be Pope some day, and for the sake of the Church, the sooner the better. But here comes Grant. He knows more about the Fellowship and its revenue than any one else. Excuse me, I must be off."

"Grant," he said to Dick at the door, "will you take my chair at Nedelca's table to explain the Fellowship Fund?"

Sterling vanished, not even noticing the flush on Dick's face. After greeting Nedelca and the Professor, Dick sat down in the vacant chair and answered the Professor's catechism.

"I don't see how you can do it on a penny a day," said Glogoul, "no, not if you got a million pennies."

"But we don't," said Grant. "We have endowments and legacies, and we have, above all, our revenue from our patents."

"Patents?" cried the Professor. "Patents of what kind? Medicines, engines, clothes?"

"Everything," said Dick. He then described the sources of the revenues of the Fellowship from patents, which may be summarized.

One great source of the revenue of the Fellowship was its extraordinary good luck in securing patents. The admirable system of intelligent indexing and careful analysis of all available information, which was applied to every department of human knowledge in the *Daily Paper*, produced a golden harvest in the field of patents. The Patent Committee of the Fellowship knew more about the patent offices of the world than any patent agent or official. They were picked men, who, having made their own fortunes, were willing to place their experience and their skill at the service of the Fellowship. If any impecunious inventor brought to their knowledge any really bright idea they would undertake to secure a patent, and to put it on the market, on condition that the inventor would content himself with a fair percentage of the net profits, the balance going to the Fellowship. They had been extraordinarily lucky at the beginning, and had secured patents which were now not purchasable by millions. The Fellowship could place anything so advantageously, and everything was done with such scrupulous honesty, that inventors found their profits under the Fellowship worth far more than they would have got under the ordinary conditions.

The first profits accruing to the Fellowship from any patent were always set aside to facilitate the re-employment of labour displaced by the new invention. Sometimes the whole of the profits for a year or more would be swallowed up in preventing the misery which at present is remorselessly inflicted upon labour whenever any new labour-saving appliance is invented. In the long run all such contrivances increase the demand for labour, but until the Fellowship was instituted there was no fund available for the mitigation of the immediate hardships resulting from such displacements in the labour market. "Always keep in mind," said Mr. Byers, the Chairman of the Patent Committee, "that no one is to be worse off if we can help it, but rather a great deal better off because of the stimulus we give to new inventions."

The growth of the Fellowship and the rapid accumulation of enormous wealth led Lady Sidney and Sterling to attempt to undertake the establishment of the most gigantic system of insurance the world ever saw. The possibility of utilising the services of the distributors of the *Daily Paper* as the collectors of the weekly insurance money enabled them to reduce enormously the cost of collection, while the magnificent revenue of the Fellowship from patents, which were more profitable than a gold mine, promised before long to secure every citizen from fear of destitution when he was aged or infirm.

To this Fellowship there accrued great legacies. Millionaires, gradually growing ashamed of the possession of wealth

beyond the limit of personal administration, endowed it, as in olden time monarchs and nobles endowed the monasteries. It was already evident to the far-seeing eye of the Professor, that in a few years the Fellowship would quietly, peacefully, almost without an effort, secure the practical control of the whole of the means of production and the actual ownership of half the wealth of the country.

"So the Socialist ideal is to be reached by the bridge of the golden rule after all," said the Professor, "and the collectivism that is triumphing over individualism is no hideous tyranny of the State, but the 'union of all who love in the service of all who suffer.'"

"Who knows?" said Dick. "So much has been done already, we are almost justified in believing that we shall do the rest."

CHAPTER XIII.

MERRY ENGLAND ONCE MORE.

EARLY next day the Professor was awakened by salvos of cannon, mingled with which were the merry peals of St. Martin's Church bells. As soon as Irene and he had breakfasted they drove to St. Paul's. The streets were all decorated, and a great triumphal arch had been erected opposite the *Daily Paper* office. The Strand and Fleet Street were gaily decorated with Venetian masts, banners, and festoons of evergreens and flowers. When they arrived at the Cathedral it was crowded, and with difficulty they found standing room. It was a thanksgiving service, full of joy and hope, and when the immense congregation joined in the closing hymn even the Professor was moved. The benediction being pronounced, the huge congregation broke up. It did not disperse, however, at once, but formed on either side of the street in order to see Lady Sidney and the staff of the *Daily Paper* come out. They then entered the carriages which were awaiting them, and drove through the decorated streets to Westminster Hall, where the rewards for heroism were distributed by Lady Sidney. The ceremony was simple but beautiful, beginning with music which had been specially composed for the occasion. It lasted about a couple of hours.

The staff then took train to Victoria Park. The show in the Park was the feature of which Nedelca was proudest. It seemed as if the whole of the East-end was streaming to the Park. There was a great distribution of prizes for the best draught animals of all descriptions, and for the best turn-out—from the huge dray-horses to the humble moke of the costermonger. Then there were trotting matches, and various displays of equine or asinine agility, which made it the most popular show of the year in the East-end. The County Council, co-operating with the Society for the Prevention of Cruelty to Animals, permitted the erection of grand stands and the use of the level spaces of the park for the fête. Lady Sidney and Nedelca arrived in time to sit down to lunch with the competitors, and after lunch distributed some of the prizes in the leading classes, especially those for humanity.

But there was no time for delay, as it was now two o'clock, and the great procession was forming under the Tower Bridge. The tide was flowing, and everything was ready for the start when Lady Sidney and her *cortège* arrived from Victoria Park. Never had the Tower looked so gay as on that day. Flags streamed from every turret of that old fortress, the approaches were lined with volunteers, the music was playing, and everything was as bright as June sunshine could make it. The Tower Bridge was simply festooned from end to end with flowers and evergreens, and was transformed into a magnificent triumphal arch under which the ships were to pass. All the ships in

the river were gay with bunting, while the river itself was alive with craft of all descriptions. Punctually at 2.30, the discharge of a gun announced that the procession had started. A gaily decorated steamer led the way; then came in long procession all the elements which a fertile imagination could conceive to make a river procession attractive. There were reproductions of the barges and galleys of all nations of all times, festooned with evergreens and decked out with flowers, while the bargemen were habited in rich and gorgeous colours. At intervals came flotillas of racing-skiffs and rowing-boats from the training ships, the Sunday-schools, and the public elementary schools. There was a spirit of rivalry between the schools to see which could turn out the smartest boats, and very gay indeed they were. The floats of the Fire Brigade in motion were not the least attractive portion of the procession. Specimens of every description of craft that was to be found on the river were there, and also the smart craft of the River Police, which acted as escort. And a very wonderful display it was! There were torpedo-boats, naphtha-launches and electric-launches and steam-launches, and boats of every description. From the upper reaches of the Thames came a contingent of pleasure-boats. Almost the most popular element was the lifeboats, and the jolly-boats of the merchantmen in the docks. All the craft which could be pressed into the great water-fête were there.

At the close of the procession, amid firing of salvos, came the great barge in which Lady Sidney and her staff were seated. This in all its details was a graphic reproduction of the barge on which Queen Elizabeth used to make her progress on the river. In the immense line of boats nothing was neglected which could add to the gaiety of the scene and the interest of the procession. All the boats moved at a regular pace, and were kept in order by stewards in swift darting steam-launches, which patrolled the whole line of route from the Tower Bridge to Mortlake. On the other side of the river was the general traffic, somewhat interrupted by the numberless small craft outside the line of route, which formed an irregular swarm of camp-followers and added greatly to the picturesqueness of the scene. At fixed distances along the Embankment from Blackfriars to Putney were moored large barges gaily decorated, on which bands were playing; while in the centre were grouped emblematic figures, trophies, and reproductions of scenes in English history.

All London seemed to have turned out. The Embankment was black with people, while an immense concourse poured westward towards Putney and Mortlake, where the prizes were competed for by the various rowing clubs, and more especially by the schools. Nothing was spared to make the holiday popular. At the usual halting-places, where groups gathered, all the humours of the fair were provided, and not of English fairs only. Lady Sidney had ransacked the Continent for the best notions as to popular entertainment. Italian, French, Russian, and German attractions were there in force, side by side with the time-honoured Punch and Judy show, and the merry-go-round, and all the business of an English fair. "It shall be merry England once more on the banks of the Thames," said Lady Sidney.

In the regatta every description of boat had a chance of competition. The river was divided into lengths, and there were four regattas going on at the same time. Prizes were given in a great marquee in the Bishop of London's grounds at Fulham. The Bishop himself presided and bade his guests welcome. The prizes were distributed by Lady Sidney, and then the company sat down to dinner. It was near sunset when the procession began to return. The scene now was even more brilliant than it had been in coming up the

THE BRIDGES WERE DECORATED WITH FESTOONS OF COLOURED LAMPS; EVERY ROWING-BOAT CARRIED A CHINESE LANTERN.

river. All the craft, from the pilot steamer to Lady Sidney's barge, were illuminated with coloured lights, while the whole flotilla was profusely decorated with Chinese lanterns. Never did old Father Thames witness such a brilliant scene. The bridges were decorated with festoons of coloured lamps; every rowing boat carried a Chinese lantern at the bow and at the stern, while the steamers which were lit with electric light showed loyal and patriotic devices picked out in coloured fire along their sides. A salvo of cannon announced the starting of the procession on its homeward journey, and all along its route it was greeted with cannon thunder, while every now and then the river banks burst into coruscations of fireworks. The whole was accompanied with the music of the bands, which were silenced at intervals in order that the rowing song of the scholars might be heard as they plied their oars down stream. Most of the buildings by the riverside were illuminated. The Emancipator building itself was a perfect blaze of light, and the great search-light moved slowly just ahead of the pilot steamer.

Glogoul and his wife had been offered seats in Lady Sidney's barge. The Professor, however, preferred to be in one of the steward's launches, and he was flitting about hither and thither marshalling the crowds of craft and keeping the way clear for the advance of the great procession. The Professor's place was then offered to Dick Grant, who was leaving England next week to spend his holiday by joining one of the Historical Pilgrimages in Switzerland. One person, at least, did not grudge the Professor his choice—one person, and perhaps two. Dick Grant was seated close to Nedelca. They knew each other well. Nedelca had always regarded him with romantic interest owing to the fact that he was the hero of the story of the mortgage of a life of which she had heard long ago in Rome. She had no idea, however, that he was the person who had saved her life at Clapham Junction when she was a mere child, and although she had often enjoyed his conversation and admired his genius, she had never regarded him with any warmer feelings. Never, that is, until that night. Who has ever drifted down stream in the warm twilight of midsummer, listening to the musical plash of the oars, and every now and then catching the sound of the clear voices of girls singing, without experiencing a kindlier feeling to all humanity? She at least was conscious for the first time of a somewhat deeper interest in Dick than she had previously felt about any one. Very lovely it was, gliding down that river, fretted with gold and silver, under the play of innumerable lamps and lanterns, with the sky lit up by the glare of the rockets. Very pleasant, and not without a romantic charm very perilous for young hearts. The conversation was general throughout, but Lady Sidney noticed that as the barge neared its destination Nedelca became more and more silent, and when at last they passed under the streaming mass of fire which converted the Tower Bridge into a miniature Niagara—the climax of the great fête—Nedelca was altogether silent. Dick Grant left them at the landing-stage. Thoroughly tired out, Nedelca and her mother drove to their house in Portman Square.

"You are very silent, Nedelca," said her mother.

"Yes," said the girl, "I am tired, and I have been thinking."

"What have you been thinking about, my darling?" asked her mother.

"I think," said Nedelca, somewhat dreamily, "that I would like to go to Switzerland this year."

CHAPTER XIV.

THE PILGRIMS AT LUCERNE.

SWITZERLAND, long the playground of Europe, had in the last half-dozen years become almost a dependence of the British Empire. The Switzers used to say in joke that their Confederation had now two Presidents: one the President of the Republic, and the other Dr. Lunn, the Director of the Historical Pilgrimages, by which the English-speaking world annually submerged the cradle of European liberty. From a small beginning in the pious picnic of Grindelwald, the pilgrimage had gradually swelled, until in 1900 the number of pilgrims from the English-speaking lands was estimated at no less than one hundred thousand. The pilgrimage began in May, and did not close till the end of September. Twenty thousand English-speaking men and women every month poured a tide of wealth into Switzerland. But that was not the reason for which they were prized by the citizens of the Swiss cantons. These annual pilgrimages were not made up of mere pleasure-seekers, or holiday-makers, or Alpine climbers. They represented a genuine pilgrimage from the newest republics of the world to the mother of all republics, and the cradle of the Federal principle. From far New Zealand, from South Africa, and from the distant Pacific Slope and the frozen regions of Northern Canada, pilgrims came to study reverently the working of its democratic institutions, and to learn the last word which the Federal principle had to teach in any European community. What Chautauqua is to the American citizen, Switzerland became on a large scale to the whole English-speaking world. American, South African, Australian and Canadian, as well as English, Irish, and Scotch, felt that they could sit at the feet of the burghers of Berne or of the peasants of the Forest Cantons, and learn from them how to reconcile order and liberty, how to combine the direct government of the people by the people with the strong restraint of a written constitution. Mr. Bryce found a welcome relief in undertaking the direction of the political studies of the English-speaking pilgrims in August and September.

It was not, however, only in the working of state systems that Switzerland attracted so many pilgrims from the United Kingdom. The vast congeries of social and economic problems which are included in the phrase "the Land Question" attracted even more students than the working of Home Rule. As Mr. Bryce conducted the political pilgrims, so Sir John Gorst took charge of those who sought to find in the agrarian laws and customs of the dwellers on the slopes of the Alps a key to the solution of the problems which were awaiting legislation at home.

Grant was an enthusiast, to whom the Alps were the sacred home of Liberty, and every spot where the Switzers purchased their freedom with their heart's blood was to him a holier shrine than any that human hands could build. He had developed a great gift of oratory in the last six years, a gift unsuspected until his visit to Switzerland in the summer. One day, standing with his back to the chapel, erected as a memorial of the battle rendered ever glorious by the devotion and the victory of Arnold von Winkelried, he began to describe the battle to the pilgrims, and so utterly lost the sense of time that he seemed to see the movements of the troops and the sword-play of battle, as if they were occurring before his eyes. He first conducted the pilgrims over the battlefield. Bands of scholars and students, carefully trained beforehand, went through the manœuvres, and took up the positions of the Switzers and Austrians. Everything was made as distinct and clear as if it had been a war game played in the War Office according to rule. He sketched in

a few nervous sentences the beginning of the war. Then waxing warm with his theme, he enchanted his hearers. They were no longer in the twentieth century, in the age of railways and of telegraphs; they saw again the knights and men-at-arms of the Austrians take up their serried ranks. They watched the mustering of the peasants and herdmen who were not afraid to challenge all the pomp of Austrian chivalry.

From time to time a low murmur of excitement ran through the crowd, which Dick heeded not, but spoke on, throwing his whole soul into the visualising of the scene, which was evidently all clear before him. He seemed to hear the clash of sword on sword, the furious cries of the combatants, and the groans of the wounded. When at last he came to describe the devotion and self-immolation of Winkelried, a solemn awe fell upon the assembly, which immediately afterwards broke out into enthusiastic cheering. Under the magnetic influence of his eloquence the whole concourse seemed to see the victorious onslaught of the Switzers through the gap opened in the Austrian ranks, followed immediately by the headlong flight and the ruthless slaughter of the invading tyrants. When his eloquent voice had ceased, and he sat down exhausted to recover his strength, it seemed as if the twentieth century suddenly had come back again. The spell of the magician was broken, but the memory of it will remain with those who were present to their dying day. Standing a little apart from the crowd, Nedelca and Lill watched and listened. Lill was enthusiastic in her admiration of Dick, but the girl was silent under the pride with which she recognised in Dick a power she had never suspected him of possessing. That was the first of his successes, but not the last.

Similar scenes were witnessed in the rocky defile of Morgarten and on the plain of Morat, but it was on the green meadow of Rutli, where the solemn oath was exchanged which marked the birth of Swiss independence, that he seemed most inspired. The meadow was too small to hold the thousands who were attracted by the magic of his eloquence and the melody of his voice. It seemed indeed as if he were the officiating priest at the Supreme Altar of the Liberty of Man. At the close of his speech the whole assembly knelt in prayer, and there were few who did not feel that their enthusiasm on behalf of Liberty was not kindled anew, an imperishable flame in their hearts. Everywhere the Swiss authorities—especially the schoolmasters—co-operated with the English pilgrims in reviving the memories of the heroic days of Switzerland. At Altdorf, Schiller's "Wilhelm Tell" was played on the very spot where Gessler raised his cap, and historical processions, reproduced with archæological accuracy, displayed the armour and accoutrements of the men who freed Switzerland from the Austrian yoke. Dick Grant was also not indifferent to the other memories which make Switzerland so dear to historical students. He was almost as eloquent in describing the attempt and failure of Calvin to establish a Theocracy at Geneva; and as he spoke by the tomb of Zwingle, his hearers for the first time realised the heroic character of the great Swiss reformer. It was a smaller company, but one which was not less absorbed in the study of its subject, which he led across the Great St. Bernard, following the track of Napoleon, and realising something of the indomitable resolution with which the great Corsican launched the French armies across the Alpine barrier. Not less interesting was the pilgrimage which followed the route of the veteran Souvaroff and his Russians on their perilous march from Italy to Zurich.

Nedelca and Lill travelling together had joined the pilgrim party in August. Nedelca had not been to Switzerland since her first visit on her way to Rome. The memory of the mountain-encircled lake was still fresh in her memory,

and she determined to make Lucerne her headquarters. She took up her abode at the Hôtel de l'Europe, which stands furthest from the station on the lake side. She never wearied of contemplating the amphitheatre of hills rising from the lake. The impression which Grant had made on Nedelca was deepened every day by the influence of his inspired eloquence. All Switzerland with its romance and heroism seemed to speak through him. Lill warned her that she was losing her head; but where the heart had already gone the head followed. At the same time Nedelca, Lady Sidney's only daughter and heir to all her millions, seemed to tower above poor Dick as much as the snow-capped Titlis towers above the wooded Burgenstock which rises from the margin of the lake. Grant was staying at the same hotel, and frequently met Nedelca; but although he worshipped her afar off, he would not have dared to tell her of his love had not circumstances facilitated or indeed compelled it.

Nedelca was passionately fond of bathing, and was an expert swimmer. She revelled in the sense of buoyancy which the water gives, and which she always fancied she would have felt to a greater degree if the art of flying had been added to the capacities of the human creature. Lill and she bathed every day, preferring always to go in the early morning, when there were few people in the bath. It was an amusement of theirs to see who could gather up the greatest number of articles thrown into the bath at random. It is an interesting amusement, but one which on this occasion nearly cost Nedelca her life.

One morning before breakfast Nedelca and Lill, accompanied by Dick Grant, left the hotel for the baths. Dick expected a friend from the Schweizerhof, but when he arrived at the baths his friend had not appeared. Seating himself under one of the plane trees on the margin of the lake, he waited for him. The ladies went into the baths. It was a beautiful morning at the end of August. One or two boats were drifting rather than sailing over the placid surface of the lake. A white fleecy cloud lay low on the slopes of Pilatus, while a great bank of white mist entirely hid from view the summits of the Urirothstock and the Titlis. The town was just beginning to wake into life. Close to him some workmen who had been repairing the embankment had left their crowbar leaning against the seat. Dick took it up to amuse himself until his friend should arrive, and was poised it on his hand, when suddenly he was startled by a person screaming from the direction of the baths.

Springing to his feet, he saw Lill in her bathing suit standing on the gangway crying in the wildest excitement, "Help, help, Nedelca is drowning!" A sudden rush of blood to his head blinded Dick for a moment; he felt his head swim, and he staggered as if he would fall, then suddenly regaining presence of mind he rushed to the baths, unconsciously still retaining his grasp of the crowbar. That accident, if it were an accident, saved Nedelca's life. Following Lill into the interior of the baths, he could see nothing.

"There! there!" Lill screamed, pointing down into the water; and looking where her finger pointed, he saw, to his horror, a girl in bathing costume at the bottom of the bath. Her feet were floating towards the surface, but her head was near the boards, about six feet under water. That was all Dick knew. In a moment he had dropped the crowbar and had dived to Nedelca's assistance. But though he raised her he could not carry her to the surface.

An instant showed him what was wrong.

The bottom of the bath was formed of planks, between two of which some object had been lodged which chained the girl's hand to the boarding. Dick struggled to release her,

but, desperate and half maddened, he found it impossible. Suddenly he remembered the crowbar he had dropped on the edge of the bath when he had plunged in.

A few strokes brought him to the side. A quick, agonised search and he had found it, and dived again to Nedelca's help. This time, weighted by the iron and his wet clothes, he sank easily. It is infinitely difficult to work under six feet of water; but Dick was accustomed to swimming open-eyed under water, and now fear and love gave him miraculous skill and presence of mind. Inserting the crowbar between the planks, he wrenched them apart, and in an instant the unconscious girl was released. Panting with excitement, and choked and blinded, Dick carried her to the side, where Lill and a group of frightened women at once proceeded to restore her. Dick only stayed for a glance at Nedelca's set face, then, dripping as he was, he rushed away for a doctor.

By this time hot blankets and restoratives had been sent from the *Hôtel Nationale*, and after ten minutes' vigorous treatment Lill had the exquisite joy of seeing Nedelca open her eyes. When Dick returned with the doctor, she was able to give him a faint little smile that changed his despair to triumph. Poor Dick had scarcely hoped that she could survive that long five minutes' immersion in the water.

It was not till then that he heard from Lill how it all happened. They had been diving for a brass chain with a ball attached. Unfortunately, the ball by some accident slipped between two of the planks which must have been wider than the others. The chain, however, remained upon the plank. Nedelca diving caught the chain round her finger. Under water there is not much time for deliberation, and Nedelca impetuously tugged at the chain, through one of the links of which she had put her forefinger. The brass link was elongated by the suddenness of the jerk and held her finger as in a vice. She could not pull it over her knuckle, and she could not get the ball from between the planking. The more she pulled the tighter the chain was compressed upon her finger. It was a horrible moment when she realised that she was practically nailed head downwards at the bottom of six feet of water. Lill, who was swimming at the other side of the bath, did not realise what had happened; but seeing that Nedelca did not appear, she dived down, and saw that she was fast to the bottom of the bath. She tried to pull her companion free. Finding the attempt vain, she rushed to the gangway and screamed for help. But for the fortunate occurrence of Grant's presence with the crowbar, Nedelca would certainly have been drowned. As it was, beyond a violent shake and a quarter of an hour's unconsciousness, she was not much the worse.

Next morning, after breakfast, Lill knocked at the door of Dick's room and asked him to come and see Nedelca. He found her very pale, lying on a sofa, looking out on the glorious panorama of the lake. Her face flushed when she saw him, and she tried to rise.

"Don't attempt to get up," said Dick, anticipating her attempt to rise. "Pray do not move. I am so glad to see you," he added, hesitating; "you are looking—"

"How can I thank you?" interrupted Nedelca. "You have brought me back to life; and not for the first time."

Dick, who had turned his eyes to the great expanse of snow-clad summits that circle the horizon, started. "What do you mean?" he asked, casting a quick, almost frightened look at the pale face at his side.

"Listen," she said. "Why did you not tell me before? I think you are very unkind, Mr. Grant."

"I unkind—what?" stammered Dick, wondering who had betrayed his secret.

"Come," said Nedelca, "sit down on that chair close to me. You are too far off. I am so weak to-day."

Dick did as he was bidden. "Really, Miss Nestor," he began, "it is I who ought to thank you for affording me an opportunity of doing a service to one whom I—whom we all, regard with such admiration."

"Curious cause for gratitude," said Nedelca, smiling, "to give a friend an opportunity of risking his life to save yours."

"You forget," said Dick, who regained somewhat of his self-possession in Nedelca's smile, "that to save the life of a heroine is the supreme reward of a hero; it is rare indeed such a privilege falls to a humble squire."

"Mr. Grant," said Nedelca, "this is idle talk, and unworthy of one who has not even thanked you once for saving her life twice. No," she said, "don't speak, don't deny it. I know all about it now. This is not the first time I have owed my life to your—your—"

"Oh, Miss Nestor," said Dick, clasping the hand she held out to him, "don't talk about gratitude. There is nothing in the whole world for which I am so grateful as for a chance of helping you."

He still kept her hand in his. Nedelca's colour came for a moment to her cheeks and then disappeared. She did not withdraw her hand.

"Listen," she said. "When I caught my finger in that chain I never realised the danger I was in. It was only when I found that I could neither get the ball from between the boards or the chain off my finger that the thought of my horrible position flashed upon me. It was awful," she added with a shudder.

Dick pressed her hand, and bent his head, not trusting himself to look at her. His heart beat with slow, heavy thuds in his breast, but he did not speak.

Nedelca went on. "In the first moment of panic I struggled and tried to cry out. I nearly choked in the water, and then a hideous feeling came over me. I remember making one struggle, and then consciousness left me. I seemed to be no longer a woman dying a cruel death, chained to the bottom of the bath. I was a child again. I had fallen out of the door of a railway-carriage, and was being dragged along the platform, when suddenly a strong arm was thrown round me, and I was lifted safely into the train. Often and often have I lived through that experience, but this time I saw the face of the man who saved me, and oh, Mr. Grant!—how could you have been silent all these years!"

Dick looked up at Nedelca. Her eyes were full of tears, and there was a tender reproach in her voice which roused strange melody in his heart. A hope which blossomed before it budded burst full-blown upon his soul. But he was silent.

"I lived it all over again as vividly as when I first experienced it, and then all became dark and dead," Nedelca went on. "Nor can I remember anything that happened until I woke up and found you and Lill bending over me. Since then Lill has told me everything, told me how for the second time you snatched me from death."

Her voice trembled. Dick half unconsciously raised her hand a little, then lowered his head and pressed the little hand to his lips. Then he looked up at Nedelca and said simply, "I am so glad always to do anything for you. And to save your life, who would not give his own?"

Nedelca was silent. There was a sadness in his tone which filled her with boundless pity. She knew Grant well. In the free republic of the *Daily Paper* she had had ample opportunity of appreciating his talents, and of admiring the enthusiasm with which he devoted himself to fulfil the dying behest of his father. No member of Sterling's staff had ever been more untiring on the trail of dishonesty and fraud. He tracked down the swindler with the pertinacity of the

HE SAW, TO HIS HORROR, A GIRL IN BATHING COSTUME AT THE BOTTOM OF THE BATH, WITH HER HEAD NEAR THE BOARDS, ABOUT SIX FEET UNDER WATER.

slenthound; and when once he had fastened on the criminal, no bloodhound of English breed held his prey in more iron grip. Quiet and reserved, dreamy, and even absent-minded as he sometimes appeared, he pursued the vampires of the modern world with tireless zeal and fiery ardour. He literally held his life as mortgaged to redeem his father's honour, and to wipe off the stain which the Emancipator had brought upon the Nonconformist escutcheon. During the first three years, when he had been Sterling's private secretary, it was he who had borne the brunt of the battle with the dragon, and had won from Lady Sidney the proud distinction of "Our best and youngest St. George!"

All this passed through Nedelca's mind. He, too, was perhaps not unconscious of her thoughts. The vibration of the brain waves at such moments synchronises so closely that the telepathic interchange of thought renders speech unnecessary. Without a word on his part, Nedelca knew that he loved her—loved her with the supreme passion of an ardent soul; but she knew at the same time that between them rose an impassable barrier. And then she had joy in the greater liberty which had been won for womanhood, and exulted in the thought that she could lightly overleap an obstacle through which he would not venture to pass.

A great dumb joy possessed Dick, an irrational joy, he thought, for never again would he stand so near the woman whom he had worshipped. He almost feared to speak lest words should break the spell and hasten the inevitable end.

"You would not let me speak of gratitude," said Nedelca, taking her hand from his and slightly raising herself on her couch, "and perhaps you were right. For gratitude, they say, is a lively sense of favours to come."

"Nonsense, Miss Nestor," said Dick, who had risen from his chair. "You know there is nothing in the whole world that I can do for you that I would not do if I only knew what it was."

"Well," said Nedelca, blushing slightly, "there is something I want you to do for me. But I warn you it is no easy thing, and it entails more than a temporary sacrifice."

"Only tell me what it is," said Dick. "Do you not know," he said, with an undertone of suppressed reproach,

"that ——" then he paused, feeling he had gone too far.

"Yes," said Nedelca, "I think I do. If I did not I would not venture to make my request. You have saved my life twice," she said, and then added artlessly—"would it be too much trouble to ask you—to—to—take care of it for me—in the future?"

"Your life! Nedelca—I mean Miss Nestor," he stammered, hardly daring to believe that the heavens had opened before him.

"No," she said, stretching out her hands, "not Miss Nestor, only Nedelca to you, Dick—or at least," she added, casting down her eyes, "until you can call me wife."

What happened Dick never exactly knew, excepting that the room seemed suddenly dark as midnight, then as suddenly it blazed as with the flames of innumerable stars. In the midst of it all he knew that he was kneeling before the couch, with his beloved clasped in his arms.

Suddenly the door opened and Lill burst into the room with a telegram in her hand.

Dick scrambled to his feet. Nedelca laughed. Lill, however, appeared too much absorbed with the contents of the telegram to notice their confusion.

"Who says miracles never happen?" said Lill triumphantly. "Jabez Spencer has been converted by the Salvation Army

in Buenos Ayres!"—"Hum!" said Nedelca. "But will he bring forth works meet for repentance?"

"Sterling telegraphs," said Lill, reading the telegram—"Spencer makes restitution; hands over entire fortune; surrenders to justice; will plead guilty, and go to penal servitude."

Dick said nothing. This thing that meant so much to him had become unimportant beside the great fact that he had won his love. But Nedelca clapped her hands joyously.

"Lill," she cried, "your news is a betrothal gift! I am going to marry Dick. He has mortgaged his life to me."

"WOULD IT BE TOO MUCH TROUBLE TO ASK YOU—TO—TO—TAKE CARE OF MY LIFE FOR ME IN THE FUTURE?"

THE END.

KEATING'S

Composed only of purest, simple Drugs. The most delicate in Health may use them in perfect confidence.

COUGH

They are emphatically the best Cough Remedy ever made.

LOZENGES

Sold by all Chemists, in Tins, 1s. 1½d. and 2s. 9d. each.

DOUGHTY'S VOICE LOZENGE

Have been known to, and appreciated by, thousands of Musical, Literary, and other, artists for nearly 40 years. Resonance of sound and clearness of tone were the objects aimed at by the inventor, and, after much careful study and observation, he at length prepared this world famed Lozenge.

Leaders of Psalmody, Choir Members, Reciters, Singers, &c., should always be at hand against possible emergencies by having with them three or four of these (Doughty's) equalled VOICE LOZENGES.

PROPRIETORS—F. NEWBERRY & SONS,
Nos. 1 and 3, King Edward Street, LONDON, E.C.
Of all Chemists, 6d., 1s., 2s. 6d., 5s., and 11s.

CATARRH, SORE THROATS, &c.

"ALKARAM" contains no Narcotic, and if inhaled on the first symptom will at once arrest them; and even when a cold has been neglected and become severe, it will give immediate relief, and generally cure in one day. It contains no Narcotic, and never produces any unpleasant effects.

CAUTION—BEWARE OF INFERIOR SUBSTITUTES.

Of all Chemists, or post free, 2s., from
F. NEWBERRY & SONS,
1 & 3, King Edward Street, LONDON, E.C.

MELLIN'S FOOD

FOR INFANTS AND INVALIDS.

"17, THE GROVE, CLAPHAM COMMON, May 10, 1896.
"DEAR MR. MELLIN,—It may interest you to know that my granddaughter, Maudie Holmes, was five years old last October, and who rode on the smallest 'Humber' bicycle in England from London to Brighton, before her last birthday, and who recently rode a mile in seven minutes. Hitchin, was brought up entirely on Mellin's Food, which has also been used with great effect in the cases of her younger twin brother and sister, Evelyn and Herbert. I have great pleasure in sending you a photograph of the youngest lady-cyclist in the world as a token of acknowledgment of the debt we are under to Mellin's Food.

Yours faithfully,—KNOX HOLMES

MELLIN'S EMULSION OF COD LIVER OIL

CURES COUGHS, COLDS, BRONCHITIS, &c.
For CHILDREN and ADULTS.

Price, 2/6 and 4/6 per Bottle. Sample Size, 1/- Of all Chemists and Stores

AN ILLUSTRATED PAMPHLET ON THE FEEDING AND REARING OF INFANTS A PRACTICAL AND SIMPLE TREATISE FOR MOTHERS,

Containing a large number of Portraits of Healthy and Beautiful Children, together with examples of Original Testimonies which are of the greatest interest to all mothers, to be had in samples, free by post, on application to

MELLIN'S FOOD WORKS, Stafford St., PECKHAM, &
